part of ICAO concerning the legal status of any country, territory, city or area,  
or of its authorities, or concerning the delimitation of its frontiers or boundaries.

## FOREWORD

### RELATIONSHIP TO ANNEX 18 TO THE CHICAGO CONVENTION

The broad principles governing the international transport of dangerous goods by air are contained in Annex 18 to the Convention on International Civil Aviation — *The Safe Transport of Dangerous Goods by Air*. These Technical Instructions amplify the basic provisions of Annex 18 and contain all the detailed instructions necessary for the safe international transport of dangerous goods by air. Interested persons may purchase copies of Annex 18 from ICAO at the following address:

International Civil Aviation Organization  
Attention: Document Sales Unit  
999 University Street  
Montréal, Quebec  
Canada H3C 5H7

### VARIATIONS FROM THE TECHNICAL INSTRUCTIONS

In accordance with the provisions of Annex 18, 2.5, Contracting States are required to notify ICAO of those cases where they have adopted provisions different from those contained in these Instructions. The variations which have been notified by States are listed in Attachment 3, together with notified variations from airline operators.

### UPDATING PROCEDURE

- ≠ It is intended that the Technical Instructions be kept up to date by an ICAO body of experts. For this purpose, the ICAO Dangerous Goods Panel will continue to meet periodically to review comments received from States and interested international organizations, to consider any changed recommendations of the United Nations Subcommittee of Experts on the Transport of Dangerous Goods or the International Atomic Energy Agency, and to prepare revised editions of the Technical Instructions. Amendments recommended by the Dangerous Goods Panel will be reviewed by the Air Navigation Commission. The Council of ICAO will then consider, with a view to approval, the amended version of the Technical Instructions and authorize their publication. Amendments will be made available on [www.icao.int/anb/fls/dangerousgoods](http://www.icao.int/anb/fls/dangerousgoods).

### OPERATIONAL USE OF THE TECHNICAL INSTRUCTIONS

- ≠ This edition of the Technical Instructions is required to be used for operations from 1 January 2009 and will remain valid until 31 December 2010 or until such later time as a new edition becomes valid.

### GENERAL PRINCIPLES USED IN DEVELOPING THE PROVISIONS OF THE TECHNICAL INSTRUCTIONS

Dangerous goods can be carried safely by air transport providing certain principles are adopted. These principles have been used in developing these Technical Instructions and are set out below; they are intended to facilitate transport while giving a level of safety such that dangerous goods can be carried without placing an aircraft or its occupants at risk, providing all the requirements are fulfilled. They try to ensure that should an incident occur it cannot lead to an accident.

In general, dangerous goods are divided into various classes or divisions according to the hazard they present. A detailed list of individual commodities is shown which indicates the class or division into which each commodity falls as well as its acceptability for transport by air and under what conditions. Since such a list cannot be exhaustive, it also includes various generic or “not otherwise specified” entries to assist in the transport of those commodities not specifically listed by name.

Some dangerous goods are identified as too dangerous ever to be carried on any aircraft; some are forbidden in normal circumstances but may be carried with specific approval from the States concerned; some are restricted to carriage only on all-cargo aircraft; but most may be carried on both passenger and all-cargo aircraft, subject to meeting the required conditions. Those restricted to all-cargo aircraft are either in larger quantities than allowed on passenger aircraft or are forbidden on such aircraft; their transport is permitted due to their being usually accessible in flight and to the ability of the flight crew to consider a greater range of actions in an emergency than is possible on passenger aircraft.

The provisions are based on material produced by the United Nations, which is contained in the Recommendations on the Transport of Dangerous Goods (ST/SG/AC.10/1), the Recommendations on the Transport of Dangerous Goods: Tests and

Criteria (ST/SG/AC.10/11), and, for radioactive materials, the International Atomic Energy Agency Regulations for the Safe Transport of Radioactive Material (TS-R-1 (ST-1, Revised)). Using a United Nations system ensures compatibility between the international modes of transport so a consignment may be carried by more than one mode without intermediate reclassification and repacking. Modifications are made to the system to take account of the peculiarities of air transport, while keeping in mind the need to ensure modal compatibility.

There are packing requirements of a general nature and packing instructions which, together, are intended to ensure that the safety of dangerous goods in air transport is assured by their packagings and the way in which they are packed. The packing requirements apply in almost all circumstances; the packing instructions mostly use UN packagings but sometimes these are not required, for instance when dangerous goods are in limited quantities. There is usually a wide choice of inner and outer packagings and single packagings are often permitted; sometimes, however, very restrictive packagings or only one or two types are permitted, or triple packagings are required. Generally, the quantity which can be put into an inner packaging and a complete package is strictly controlled. This is to minimize the inherent risk presented by the dangerous goods so that if an incident should occur, the situation would not produce an unacceptable hazard or lead to injury or major property damage.

After dangerous goods have been packed, the packages are marked with essential information, including the proper shipping name and UN number, and labels depicting all the potential hazard(s) of the contents are affixed. This is to ensure packages containing dangerous goods can be recognized and warning given of the potential hazard(s) without relying on information on accompanying documents. A dangerous goods transport document accompanies most consignments to provide detailed information about the goods so that, if required, there is a separate means of identifying the contents of packages.

There is generally no restriction on the number of packages of dangerous goods which can be loaded on an aircraft but there are provisions for their stowage. Incompatible dangerous goods are segregated and most are separated from passengers. The pilot-in-command is informed of what is on board an aircraft since, among other things, in an emergency the dangerous goods need to be considered when deciding on action. If an in-flight emergency does occur, the pilot-in-command needs to convey information to the air traffic services, in order to aid the response to such an accident or incident. In the event of an accident or incident, information is provided by the operator to the relevant authority as quickly as possible so as to ensure that any hazard arising from damage to the dangerous goods is minimized.

Dangerous goods accidents and incidents have to be reported so that an investigation by a relevant authority can establish the cause and take action to prevent a recurrence, wherever possible. In particular, any weakness or error in the Technical Instructions has to be identified.

Training is an important aid to achieving an understanding of the philosophy and requirements of the Technical Instructions. There is a need for everyone concerned to receive training on the subject either for general familiarization or to provide detailed knowledge, so that the responsibilities of the individual can be met. Dangerous goods are very unlikely to cause a problem when they are prepared and handled in compliance with the Technical Instructions.

### USE OF THE TECHNICAL INSTRUCTIONS

The Technical Instructions are divided into eight Parts, with each Part divided into Chapters and each Chapter divided into paragraphs and subparagraphs.

Within each Chapter, the Chapter number is incorporated into all of the paragraph numbers; thus, in Chapter 3, paragraph 2 carries the number "3.2". When referring to a paragraph, it is necessary to identify the appropriate Part; if the above example were located in Part 2, the reference to it would be shown as "2;3.2" (that is, Part 2; Chapter 3, paragraph 3.2).

Figures and Tables are numbered sequentially within the Part in which they appear. Thus the second figure appearing in Part 4 is identified as "Figure 4-2" and the first table appearing in Part 3 is identified as "Table 3-1".

≠ Use of the Technical Instructions will be facilitated by reference to the detailed Index in Attachment 5.

The detailed content of the Technical Instructions gives all the necessary provisions to enable a consignment of dangerous goods to be correctly prepared for air transport. However, to assist the user of this document, the following step-by-step procedure is given for guidance to ensure all the applicable requirements for classifying, packing, labelling, marking and documenting are met.

It should be noted that the information given below is for guidance only and the relevant sections should be checked to ascertain their relevance to each consignment.

1. Determine the correct technical name or composition of the substance or the description of the article.
2. Ascertain whether the name or composition of the substance or article appears in Table 3-1 and if so what is the proper shipping name.
3. If the substance or article does not appear in Table 3-1, determine the class or division into which it falls by comparing its known properties with the definitions for the various classes, which are given in Part 2, Chapters 1 to 9. If the properties are not known, tests should be carried out to determine the appropriate class or division. If the article or substance is not listed by name in Table 3-1 and does not meet the definition of any of the classes, it is not subject to these requirements for the transport of dangerous goods. For substances or articles with multiple hazards, the

provisions of Part 2, Introductory Chapter should be followed. Once all the properties of the substance or article are known, determine whether it is forbidden for transport under any circumstance according to the provisions of 1;2.1. If the substance or article does not come within the provisions of 1;2.1, determine the proper shipping name from the most appropriate of the n.o.s. entries in Table 3-1. Information on n.o.s. entries is given in Part 2, Introductory Chapter.

- ≠ 4. If it is desired to transport the substance or article under the provisions for excepted quantities, all the requirements of 3;5 must be met. The substance or article will then not be subject to any of the other requirements of the Technical Instructions other than those listed in 3;5.1.1.
- 5. If it is desired to transport the substance or article under the provisions for limited quantities, all the requirements of 3;4 must be met and also all the applicable requirements of the Technical Instructions, except where otherwise provided for in 3;4.
- 6. If the substance or article is not to be transported as an excepted quantity or a limited quantity, determine whether it is desired to transport it on passenger or cargo aircraft.
- ≠ 7. From the information given in columns 10 to 13 of Table 3-1, ascertain whether or not the substance or article is forbidden for transport on passenger aircraft or on both passenger and cargo aircraft.
- 8. If the substance or article is shown as forbidden for transport on either passenger aircraft or both passenger and cargo aircraft, ascertain whether it could be subject to an exemption under the provisions of 1;1.1.2, by consulting the appropriate national authority. If the substance or article is forbidden for transport on passenger aircraft, determine whether it can be transported on cargo aircraft.
- ≠ 9. If it is desired to transport the substance or article on passenger aircraft and this is not forbidden and the quantity per package does not exceed the permitted maximum net quantity per package given in column 11 of Table 3-1, determine the packing instruction number, quantity limitation, special provisions and any State or operator variations as shown in Tables 3-1 and 3-2 and Attachment 3.
- 10. If it is desired to transport the substance or article on a cargo aircraft or if it can only be carried on such aircraft, determine the packing instruction number, quantity limitation, special provisions and any State or operator variations as shown in Tables 3-1 and 3-2 and Attachment 3.
- 11. Determine the packing details from the relevant information or packing instruction in Part 4 and any special requirements from Part 2, Chapters 1 to 9 and Part 5, Chapter 1.
- 12. Select, where permitted, a method of packing from the packing instruction, or ascertain the provisions of the instruction and ensure the packagings to be used meet all the relevant requirements of Part 4, Chapter 1 and Part 6.
- 13. Prepare the consignment in accordance with all the relevant requirements of paragraphs 9 to 12 above.
- 14. Ensure all the appropriate labels and markings are affixed to or printed on the packages according to Part 5, Chapters 2 and 3.
- 15. Make any appropriate advance arrangements in accordance with Part 5, Chapter 1.
- 16. Prepare the transport documents and complete and sign the dangerous goods transport document in accordance with Part 5, Chapter 4.
- 17. Offer the complete consignment for transport by air.

### THE SUPPLEMENT TO THE TECHNICAL INSTRUCTIONS

A Supplement to the Technical Instructions provides information on the safe transport of dangerous goods by air that is primarily of interest to States. Publishing this information in a separate document eliminates from the Technical Instructions material which the average user has neither the need nor the desire to know. The size and complexity of the Technical Instructions is thereby reduced and its comprehensibility enhanced. Examples of the subjects dealt with in the Supplement are guidance for the issue of certain exemptions or approvals by States and the reporting of dangerous goods accidents and incidents to ICAO by Contracting States.

The Supplement is published at the same time as the Technical Instructions and is distributed to the aviation administrations of all the Contracting States of ICAO. However, it is recognized that there may be occasions when the information in the Supplement might be helpful to other readers. Copies can be purchased from the Regional Offices of ICAO or from the Headquarters of ICAO using the following address:

International Civil Aviation Organization  
Attention: Document Sales Unit  
999 University Street  
Montréal, Quebec  
Canada H3C 5H7

≠ **THE 2009-2010 EDITION**

The Technical Instructions have been amended to make them as up to date as possible and to clarify, where necessary, the intent of the requirements. Account has been taken of comments received from users throughout the world. This has resulted in numerous minor changes in all parts of the book.

≠ It is intended, for the time being, to continue issuing new versions of the Technical Instructions biennially. This is the twelfth biennial edition of the Technical Instructions and it will be valid for two years, i.e. from 1 January 2009 to 31 December 2010 or until such later time as a new edition becomes valid.

≠ The requirements have been amended so as to align them, as far as possible, with the Fifteenth Revised Edition of the United Nations *Recommendations on the Transport of Dangerous Goods* and the *International Atomic Energy Agency (IAEA) Regulations for the Safe Transport of Radioactive Material*, as incorporated therein.

≠ The amendments include the following:

- revision and clarification of recurrent training requirements (1;4.2.3);
- consolidation of general provisions concerning Class 7 into one new chapter (1;6)
- addition of new classification criteria for environmentally hazardous substances (2;9.2);
- revision of provisions for lithium batteries (3;2, 3;3, 4;11, 5;3, 8;1);
- revisions to special provisions (3;3);
- revision, addition and transfer of excepted quantity provisions into a new chapter (3;5);
- addition of new packing instructions for fuel cells in Divisions 2.1, 4.3 and Class 8 (4;4, 4;6, 4;10);
- revision of “cargo aircraft only” label (Figure 5-25);
- addition of provisions to allow for electronic documentation (5;4);
- revision of acceptance requirements (7;1);
- revision of requirements for the storage and loading of dangerous goods (7;2.4);
- revision of requirements for the provision of information related to dry ice to the pilot-in-command (7;4.1);
- addition of requirements for information to passengers (7;5.1.2);
- restructuring of the provisions for dangerous goods carried by passengers and crew (8;1.1);
- addition of new requirement making the carriage of dry ice by passenger or crew subject to approval by the operator (8;1.1);
- addition of provision for the carriage of fuel cells containing hydrogen in metal hydrides by passengers and crew under certain conditions (8;1.1);

*Note.— Reformatted packing instructions have been developed which will become applicable from 1 January 2011. They are presented in a new attachment as advance notification (Attachment 4).*

### ABBREVIATIONS AND SYMBOLS

The abbreviations and symbols in the following table are used throughout the Instructions, or in the particular sections indicated, and have the meanings shown below.

<i>Abbreviation or symbol</i>	<i>Meaning</i>
A/m	amperes per metre
Bq	becquerel
cm	centimetre
°C	degree Celsius
G	gross mass as prepared for transport (as used in columns 11 and 13 of Table 3-1)
g/m <sup>2</sup>	grams per square metre
Gy	gray
Hz	hertz
IAEA	International Atomic Energy Agency

---

IP	inner packaging
ISO	the International Organization for Standardization
J/g	joules per gram
J/kg	joules per kilogram
K	kelvin
kg	kilogram
kgf	kilogram-force
kPa	kilopascal
L	litre
LC	lethal concentration
LD	lethal dose
L/kg	litres per kilogram
m	metre
mL	millilitre
mm	millimetre
mS/m	millisiemens per metre
N	newton
n.o.s.	not otherwise specified
$\Omega$ /m	ohm per metre
SI	the International System of Units developed by the General Conference of Weights and Measures (Système international d'unités)
Sv	sievert
UN	the United Nations Committee of Experts on the Transport of Dangerous Goods
W/m <sup>2</sup>	watts per square metre
W/m/K	Watts per metre per Kelvin
$\mu$ m	micrometre
≠	this symbol indicates changed text
+	this symbol indicates new or relocated text
>	this symbol indicates deleted text

**GENERAL**

## Chapter 1

### SCOPE AND APPLICABILITY

*Parts of this Chapter are affected by State Variations AE 3, BE 2, BE 4, BE 5, CA 6, CA 12, CH 3, DE 1, DE 4, FR 3, GB 2, IN 1, IR 1, IT 1, IT 5, NL 3, NL 6, US 1, VC 1, VC 2, VC 3, VU 2; see Table A-1*

*Note.— Recommendations on Tests and Criteria, which are incorporated by reference into certain provisions of these Instructions, are published as a separate Manual (United Nations Recommendations on the Transport of Dangerous Goods, Manual of Tests and Criteria) (ST/SG/AC.10/11/Rev.4), the contents of which are:*

*Part I. Classification procedures, test methods and criteria relating to explosives of Class 1;*

*Part II. Classification procedures, test methods and criteria relating to self-reactive substances of Division 4.1 and organic peroxides of Division 5.2; and*

*Part III. Classification procedures, test methods and criteria relating to substances or articles of Class 3, Class 4, Division 5.1 and Class 9.*

*Appendices. Information common to a number of different types of tests and national contacts for test details.*

#### 1.1 GENERAL APPLICABILITY

1.1.1 These *Technical Instructions for the Safe Transport of Dangerous Goods by Air*, referred to herein as the "Instructions", prescribe the detailed requirements applicable to the international civil transport of dangerous goods by air. Any addenda to this edition of the *ICAO Technical Instructions for the Safe Transport of Dangerous Goods by Air* issued by ICAO constitute part of these Instructions.

1.1.2 In cases of extreme urgency, or when other forms of transport are inappropriate, or full compliance with the prescribed requirements is contrary to public interest, the States concerned may grant exemptions from the provisions of the Instructions provided that in such cases every effort is made to achieve an overall level of safety in transport, which is equivalent to the level of safety provided by these Instructions. The States concerned are the States of Origin, transit, overflight and destination of the consignment, and the State of the Operator. For the State of overflight, if none of the criteria for granting an exemption are relevant, an exemption may be granted based solely on whether it is believed that an equivalent level of safety in air transport has been achieved.

*Note 1.— Refer to 1;2.1 for dangerous goods forbidden for transport by air under any circumstance.*

*Note 2.— Unless otherwise provided for, exemptions may be granted to permit the carriage of dangerous goods that are identified in columns 10 and 11 or 12 and 13 of the Dangerous Goods List (Table 3-1) as being forbidden. Exemptions may also concern other parts of the Technical Instructions.*

#### 1.1.3 General exceptions

1.1.3.1 Except for 7;4.2, these Instructions do not apply to dangerous goods carried on an aircraft where the dangerous goods are:

- ≠ a) to provide, during flight, medical aid to a patient when those dangerous goods:
  - 1) have been placed on board with the approval of the operator; or
  - 2) form part of the permanent equipment of the aircraft when it has been adapted for specialized use;
 providing that:
  - 1) gas cylinders have been manufactured specifically for the purpose of containing and transporting that particular gas;
  - 2) equipment containing wet cell batteries is kept and, when necessary, secured in an upright position to prevent spillage of the electrolyte;

*Note.— For dangerous goods that passengers are permitted to carry as medical aid, see 8;1.1.2.*

- b) to provide, during flight, veterinary aid or a humane killer for an animal;
- c) for dropping in connection with agricultural, horticultural, forestry or pollution control activities;
- d) to provide, during flight, aid in connection with search and rescue operations;
- e) vehicles carried in aircraft designed or modified for vehicle ferry operations and all of the following requirements are met:
  - 1) authorization has been given by the appropriate authorities of the States concerned, and such authorities have prescribed specific terms and conditions for the particular operator's operation;
  - 2) vehicles are secured in an upright position;
  - 3) fuel tanks are so filled as to prevent spillage of fuel during loading, unloading and transit; and
  - 4) adequate ventilation rates are maintained in the aircraft compartment in which the vehicle is carried;
- f) required for the propulsion of the means of transport or the operation of its specialized equipment during transport (e.g. refrigeration units) or that are required in accordance with the operating regulations (e.g. fire extinguishers) (see 2.2).

1.1.3.2 Provision must be made to stow and secure dangerous goods transported under 1.1.3.1 a), b), c) and d) during take-off and landing and at all other times when deemed necessary by the pilot-in-command.

1.1.3.3 The dangerous goods must be under the control of trained personnel during the time when they are in use on the aircraft.

1.1.3.4 Dangerous goods transported under 1.1.3.1 a), b), c) and d) may be carried on a flight made by the same aircraft before or after a flight for the purposes identified above, when it is impracticable to load or unload the dangerous goods immediately before or after the flight, subject to the following conditions:

- a) the dangerous goods must be capable of withstanding the normal conditions of air transport;
- b) the dangerous goods must be appropriately identified (e.g. by marking or labelling);
- c) the dangerous goods may only be carried with the approval of the operator;
- d) the dangerous goods must be inspected for damage or leakage prior to loading;
- e) loading must be supervised by the operator;
- f) the dangerous goods must be stowed and secured in the aircraft in a manner that will prevent any movement in flight which would change their orientation;
- g) the pilot-in-command must be notified of the dangerous goods loaded on board the aircraft and their loading location. In the event of a crew change, this information must be passed to the next crew;
- h) all personnel must be trained commensurate with their responsibilities;
- i) the provisions of 7;4.2 and 7;4.4 apply.

## 1.2 GENERAL TRANSPORT REQUIREMENTS

Except as otherwise provided for in these Instructions, no person may offer or accept dangerous goods for international civil transport by air unless those goods are properly classified, documented, certificated, described, packaged, marked, labelled and in the condition for shipment required by these Instructions. If a person performs a function required by these Instructions on behalf of the person who offers the dangerous goods for transport by air or on behalf of the operator, that person must perform that function in accordance with the requirements of these Instructions. No person may transport dangerous goods by air unless those goods are accepted, handled and transported in accordance with these Instructions. No person may label, mark, certify or offer a packaging as meeting the requirements of these Instructions unless that packaging is manufactured, fabricated, marked, maintained, reconditioned or repaired as required by these Instructions. No person shall carry dangerous goods or cause dangerous goods to be carried aboard an aircraft in either checked or carry-on baggage or on his/her person, unless permitted by 8;1.1.2.

*Note.— When dangerous goods intended for air transport are carried by surface transport to or from an aerodrome, any other applicable national or modal transport requirements should be met in addition to those that are applicable for the goods when carried by air.*

### **1.3 DANGEROUS GOODS PACKAGES OPENED BY CUSTOMS AND OTHER AUTHORITIES**

Any package opened during an inspection must, before being forwarded to the consignee, be restored by qualified persons to a condition that complies with these Instructions.

>

### **1.4 RELATIONSHIP TO ANNEX 18**

ICAO Standards and Recommended Practices related to the transport of dangerous goods are contained in Annex 18 to the Convention on International Civil Aviation. These Instructions contain the detailed technical material needed to support the broad provisions of Annex 18 (with Amendments 1 to 9) in order to provide a fully comprehensive set of international regulations.

### **1.5 REQUESTS FOR AMENDMENTS TO THE TECHNICAL INSTRUCTIONS**

Any request for an amendment to the Technical Instructions must be submitted to the appropriate national authority. Requests for amendments should include the following information:

- a) the text or substance of the amendment proposed or identification of the provision the petitioner seeks to have repealed, as appropriate;
- b) a statement of the interest of the petitioner in the action requested; and
- c) any information and arguments to support the action sought.

---

## Chapter 2

### LIMITATION OF DANGEROUS GOODS ON AIRCRAFT

*Parts of this Chapter are affected by State Variations CA 5, CA 9, DQ 3, FR 8, GB 5, NL 2, US 2, VC 4; see Table A-1*

#### 2.1 DANGEROUS GOODS FORBIDDEN FOR TRANSPORT BY AIR UNDER ANY CIRCUMSTANCE

Any article or substance which, as presented for transport, is liable to explode, dangerously react, produce a flame or dangerous evolution of heat or dangerous emission of toxic, corrosive or flammable gases or vapours under conditions normally encountered in transport must not be carried on aircraft under any circumstance.

*Note 1.— Certain dangerous goods known to meet the description above have been included in the Dangerous Goods List (Table 3-1) with the word “Forbidden” shown in columns 2 and 3. It must be noted, however, that it would be impossible to list all dangerous goods which are forbidden for transport by air under any circumstance. Therefore, it is essential that appropriate care be exercised to ensure that no goods meeting the above description are offered for transport.*

*Note 2.— Paragraph 2.1 is intended to include articles being returned to the manufacturer for safety reasons.*

#### 2.2 EXCEPTIONS FOR DANGEROUS GOODS OF THE OPERATOR

2.2.1 The provisions of these Instructions do not apply to the following:

- a) articles and substances which would otherwise be classified as dangerous goods but which are required to be aboard the aircraft in accordance with the pertinent airworthiness requirements and operating regulations or that are authorized by the State of the Operator to meet special requirements;
- b) aerosols, alcoholic beverages, perfumes, colognes, safety matches and liquefied gas lighters carried aboard an aircraft by the operator for use or sale on the aircraft during the flight or series of flights, but excluding non-refillable gas lighters and those lighters liable to leak when exposed to reduced pressure;
- c) dry ice intended for use in food and beverage service aboard the aircraft.

2.2.2 Unless otherwise authorized by the State of the Operator, articles and substances intended as replacements for those referred to in 2.2.1 a), or articles and substances referred to in 2.2.1 a) which have been removed for replacement, must be transported in accordance with the provisions of these Instructions, except that when consigned by operators, they may be carried in containers specially designed for their transport, provided such containers are capable of meeting at least the requirements for the packagings specified in these Instructions for the items packed in the containers.

2.2.3 Unless otherwise authorized by the State of the Operator, articles and substances intended as replacements for those referred to in 2.2.1 b) and c) must be transported in accordance with the provisions of these Instructions.

#### 2.3 TRANSPORT OF DANGEROUS GOODS BY POST

2.3.1 In accordance with the Universal Postal Union (UPU) Convention, dangerous goods as defined in these Instructions, with the exception of those listed below, are not permitted in mail. Appropriate national authorities should ensure that the provisions are complied with in relation to the transport of dangerous goods by air.

≠ 2.3.2 The following dangerous goods may be acceptable in mail for air carriage subject to the provisions of the appropriate national authorities concerned and these Instructions which relate to such material:

- a) patient specimens as defined in 2;6.3.1.4 provided that they are classified, packed and marked as required by 2;6.3.2.3.6;
- b) infectious substances assigned to category B (UN 3373) only, when packed in accordance with the requirements of Packing Instruction 650, and solid carbon dioxide (dry ice) when used as a refrigerant for UN 3373; and
- c) radioactive material, the activity of which does not exceed one-tenth of that listed in Table 2-15.

#

**2.4 DANGEROUS GOODS IN EXCEPTED QUANTITIES**

Small quantities of dangerous goods, as defined in Part 3, Chapter 5, are excepted from certain provisions of these Instructions subject to the conditions laid down in that chapter.

**2.5 EXCEPTIONS FOR DANGEROUS GOODS  
PACKED IN LIMITED QUANTITIES**

Dangerous goods packed in limited quantities are excepted from certain provisions of these Instructions subject to the conditions laid down in Part 3, Chapter 4.

---

## Chapter 3

### GENERAL INFORMATION

*Parts of this Chapter are affected by State Variation BE 1; see Table A-1*

#### 3.1 DEFINITIONS

3.1.1 The following is a list of definitions of commonly used terms in these Instructions. Definitions of terms which have their usual dictionary meanings or are used in the common technical sense are not included. Definitions of additional terms used solely in conjunction with radioactive material are contained in 2;7.1.3.

**Aerosols or aerosol dispensers.** Non-refillable receptacles meeting the requirements of 6;3.2.7, made of metal, glass or plastic and containing a gas, compressed, liquefied or dissolved under pressure, with or without a liquid, paste or powder, and fitted with a release device allowing the contents to be ejected as solid or liquid particles in suspension in a gas, as a foam, paste or powder or in a liquid state or in a gaseous state.

+ **Animal material.** Animal carcasses, animal body parts or animal foodstuffs.

**Appropriate national authority.** Any authority designated, or otherwise recognized, by a State to perform specific functions related to provisions contained in these Instructions.

**Approval.** An authorization issued by the appropriate national authority for:

- a) transport of those entries listed in Table 3-1 as forbidden on passenger and/or cargo aircraft to which Special Provision A1, A2 or A109 has been assigned in column 7; or
- b) other purposes as specified in these Instructions.

*Note.— Unless otherwise indicated, approval is only required from the State of Origin.*

≠ **Approval.** For the transport of Class 7 material:

**Multilateral approval.** The approval by the relevant competent authority of the country of origin of the design or shipment, as applicable, and also, where the consignment is to be transported through or into any other country, approval by the competent authority of that country. The term “through or into” specifically excludes “over”, i.e. the approval and notification requirements must not apply to a country over which radioactive material is carried in an aircraft, provided that there is no scheduled stop in that country.

**Unilateral approval.** The approval of a design which is required to be given by the competent authority of the country of origin of the design only.

**ASTM.** The American Society for Testing and Materials (ASTM International, 100 Barr Harbor Drive, PO Box C700, West Conshohocken, PA 19428-2959, United States).

**Bags.** Flexible packagings made of paper, plastic film, textiles, woven material or other suitable materials.

**Boxes.** Packagings with complete rectangular or polygonal faces, made of metal, wood, plywood, reconstituted wood, fibreboard, plastic or other suitable material. Small holes for purposes such as ease of handling or opening, or to meet classification requirements, are permitted as long as they do not compromise the integrity of the packaging during transport.

**Bundles of cylinders.** (See UN Recommendations, Chapter 1.2). Not permitted for air transport.

**Cargo.** Any property carried on an aircraft other than mail, stores and accompanied or mishandled baggage.

**Cargo aircraft.** Any aircraft, other than a passenger aircraft, which is carrying goods or property.

**Closures.** Devices which close an opening in a receptacle.

**Combination packagings.** A combination of packagings for transport purposes, consisting of one or more inner packagings secured in an outer packaging in accordance with the relevant provisions of Part 4.

≠ **Competent authority.** Any body or authority designated or otherwise recognized as such for any purpose in connection with these Instructions.

*Note. — This applies to radioactive material only.*

**Compliance assurance.** A systematic programme of measures applied by an appropriate authority which is aimed at ensuring that the provisions of these Instructions are met in practice.

**Composite packagings.** Packagings consisting of an outer packaging and an inner receptacle so constructed that the inner receptacle and the outer packaging form an integral packaging. Once assembled, it remains thereafter an integrated single unit; it is filled, stored, transported and emptied as such.

*Note.— Composite packagings for the purpose of these Instructions are regarded as single packagings.*

≠ **Confinement system.** For the transport of Class 7 material, the assembly of fissile material and packaging components specified by the designer and agreed to by the competent authority as intended to preserve criticality safety.

**Consignee.** Any person, organization or government which is entitled to take delivery of a consignment.

**Consignment.** One or more packages of dangerous goods accepted by an operator from one shipper at one time and at one address, receipted for in one lot and moving to one consignee at one destination address.

≠ **Containment system.** For the transport of Class 7 material, the assembly of components of the packaging specified by the designer as intended to retain the radioactive material during transport.

**Control temperature.** The maximum temperature at which the substance can be safely transported. It is assumed that during transport the temperature of the immediate surroundings of the package does not exceed 55°C and attains this value for a relatively short time only during each period of 24 hours.

**Crates.** Outer packagings with incomplete surfaces.

*Note. — For air transport, crates may not be used as outer packagings of composite packagings.*

**Crew member.** A person assigned by an operator to duty on an aircraft during a flight duty period.

**Critical temperature.** The temperature above which the substance cannot exist in the liquid state.

≠ **Criticality safety index (CSI) assigned to a package, overpack or freight container containing fissile material.** For the transport of Class 7 material, a number which is used to provide control over the accumulation of packages, overpacks or freight containers containing fissile material.

**Cryogenic receptacle.** A transportable, thermally insulated receptacle for refrigerated liquefied gases, of a water capacity of not more than 1 000 litres.

**Cylinders.** Transportable pressure receptacles of a water capacity not exceeding 150 litres.

**Dangerous goods.** Articles or substances which are capable of posing a risk to health, safety, property or the environment and which are shown in the list of dangerous goods in these Instructions, or which are classified according to these Instructions.

**Dangerous goods accident.** An occurrence associated with and related to the transport of dangerous goods by air which results in fatal or serious injury to a person or major property damage.

**Dangerous goods incident.** An occurrence other than a dangerous goods accident associated with and related to the transport of dangerous goods by air, not necessarily occurring on board an aircraft, which results in injury to a person, property damage, fire, breakage, spillage, leakage of fluid or radiation or other evidence that the integrity of the packaging has not been maintained. Any occurrence relating to the transport of dangerous goods which seriously jeopardizes an aircraft or its occupants is also deemed to be a dangerous goods incident.

*Note.— A dangerous goods accident or incident may also constitute an aircraft accident or incident as specified in Annex 13 — Aircraft Accident and Incident Investigation.*

**Dangerous goods security.** Measures or precautions to be taken by operators, shippers and others involved in the transport of dangerous goods aboard aircraft to minimize theft or misuse of dangerous goods that may endanger persons or property.

≠ **Design.** For the transport of Class 7 material, the description of special form radioactive material, low dispersible radioactive material, package or packaging which enables such items to be fully identified. The description may include specifications, engineering drawings, reports demonstrating compliance with regulatory requirements, and other relevant documentation.

**Drums.** Flat-ended or convex-ended cylindrical packagings made of metal, fibreboard, plastic, plywood or other suitable materials. This definition also includes packagings of other shapes, e.g. round taper-necked packagings, or pail-shaped packagings. Jerricans are not covered by this definition.

**Elevated temperature substance.** A substance which is transported or offered for transport:

— in the liquid state at a temperature at or above 100°C;

- in the liquid state with a flashpoint above 60°C and which is intentionally heated to a temperature above its flashpoint;  
or
- in a solid state and at a temperature at or above 240°C.

**EN (standard).** A European standard published by the European Committee for Standardization (CEN) (CEN — 36 rue de Stassart, B-1050 Brussels, Belgium).

**Exception.** A provision in these Instructions which excludes a specific item of dangerous goods from the requirements normally applicable to that item.

- ≠ **Exclusive use.** For the transport of Class 7 material, the sole use, by a single shipper, of an aircraft or of a large freight container, in respect of which all initial, intermediate and final loading and unloading is carried out in accordance with the directions of the shipper or consignee.

**Exemption.** An authorization issued by an appropriate national authority providing relief from the provisions of these Instructions.

*Note.— The requirements for exemptions are given in 1;1.1.2.*

**Explosive article.** An article containing one or more explosive substances.

**Explosive substance.** A solid or liquid substance (or a mixture of substances) which is in itself capable by chemical reaction of producing gas at such a temperature and pressure and at such a speed as to cause damage to the surroundings. Included are pyrotechnic substances even when they do not evolve gases. A substance which is not itself an explosive but which can form an explosive atmosphere of gas, vapour or dust is not included.

**Filling ratio.** The ratio of the mass of gas to the mass of water at 15°C that would fill completely a pressure receptacle fitted ready for use.

**Flash point.** The lowest temperature of a liquid at which flammable vapour is given off in a test vessel in sufficient concentration to be ignited in air when exposed momentarily to a source of ignition.

*Note.— Some test methods are listed in 2;3.3.*

**Flight crew member.** A licensed crew member charged with duties essential to the operation of an aircraft during a flight duty period.

**Freight container.** See unit load device.

*Note.— For the definition of freight container for radioactive material, see 2;7.1.3.*

**Freight container in the case of radioactive material transport.** An article of transport equipment designed to facilitate the transport of packaged goods by one or more modes of transport without intermediate reloading, which is of a permanent enclosed character, rigid and strong enough for repeated use, and must be fitted with devices facilitating its handling, particularly in transfer between aircraft and from one mode of transport to another. A small freight container is that which has either an overall outer dimension less than 1.5 m, or an internal volume of not more than 3 m<sup>3</sup>. Any other freight container is considered to be a large freight container. For the transport of Class 7 material, a freight container may be used as a packaging.

**Freight forwarder.** A person or organization who offers the service of arranging the transport of cargo by air.

**GHS.** The first revised edition of the *Globally Harmonized System of Classification and Labelling of Chemicals*, published by the United Nations as document ST/SG/AC.10/30/Rev. 2.

**Gross mass.** The total mass of the package.

**IAEA.** The International Atomic Energy Agency (IAEA, P.O. Box 100 — A-1400 Vienna, Austria).

**ID number.** A temporary identification number for entries in Table 3-1 — Dangerous Goods List — which have not been assigned a UN number.

**IEC.** The International Electrotechnical Commission (IEC, 3, rue de Varembe, P.O. Box 131, CH-1211 Geneva 20, Switzerland).

**IMO.** The International Maritime Organization (IMO, 4 Albert Embankment, London SE1 7SR, United Kingdom).

**Incompatible.** Describing dangerous goods which, if mixed, would be liable to cause a dangerous evolution of heat or gas or produce a corrosive substance.

**Inner packagings.** Packagings for which an outer packaging is required for transport.

**Inner receptacles.** Receptacles which require an outer packaging in order to perform their containment function.

**Inspection body.** An independent inspection and testing body approved by the appropriate national authority.

**Intermediate bulk containers (IBCs).** (See UN Recommendations, Chapter 1.2). Not permitted for air transport.

**Intermediate packagings.** Packagings placed between inner packagings or articles and an outer packaging.

**International System of Units (SI).** A rational and coherent system of units which provides the basis for the units of measurement used for air and ground operations as contained in Annex 5 to the Convention on International Civil Aviation.

**ISO (standard).** An international standard published by the International Organization for Standardization (ISO — 1, rue de Varembé, CH-1204 Geneva 20, Switzerland).

**Jerricans.** Metal or plastic packagings of rectangular or polygonal cross-section.

**Large packagings.** (See UN Recommendations, Chapter 1.2). Not permitted for air transport.

**Liner.** A separate tube or bag inserted into a packaging but not forming an integral part of it, including the closures of its openings.

**Liquids.** Dangerous goods which at 50°C have a vapour pressure of not more than 300 kPa (3 bar), which are not completely gaseous at 20°C and at a pressure of 101.3 kPa, and which have a melting point or initial melting point of 20°C or less at a pressure of 101.3 kPa. A viscous substance for which a specific melting point cannot be determined must be subjected to the ASTM D 4359-90 test; or to the test for determining fluidity (penetrometer test) prescribed in section 2.3.4 of Annex A of the *European Agreement Concerning the International Carriage of Dangerous Goods by Road (ADR)* (United Nations publication: ECE/TRANS/175).

**Low dispersible radioactive material.** A solid radioactive material or a solid radioactive material in a sealed capsule, that has limited dispersibility and is not in powder form.

**Mail.** Dispatches of correspondence and other items tendered by, and intended for delivery to, postal services in accordance with the rules of the Universal Postal Union (UPU).

**Manual of Tests and Criteria.** The fourth revised edition of the United Nations publication entitled *Recommendations on the Transport of Dangerous Goods, Manual of Tests and Criteria* (ST/SG/AC.10/11/REV.4).

**Maximum capacity.** The maximum inner volume of receptacles or packagings expressed in litres.

**Maximum net mass.** The maximum net mass of contents in a single packaging or maximum combined mass of inner packagings and the contents thereof expressed in kilograms.

≠ **Maximum normal operating pressure.** For the transport of Class 7 material, the maximum pressure above atmospheric pressure at mean sea level that would develop in the containment system in a period of one year under the conditions of temperature and solar radiation corresponding to environmental conditions in the absence of venting, external cooling by an ancillary system, or operational controls during transport.

**Multiple-element gas containers (MEGCs).** (See UN Recommendations Chapter 1.2). Not permitted for air transport.

**Net quantity.** The mass or volume of the dangerous goods contained in a package excluding the mass or volume of any packaging material, except in the case of explosive articles and of matches where the net mass is the mass of the finished article excluding packagings.

**Open cryogenic receptacle.** A metal vacuum insulated vessel, dewar or flask that is vented to the atmosphere to prevent pressure build-up.

**Operator.** A person, organization or enterprise engaged in or offering to engage in an aircraft operation.

**Outer packaging.** The outer protection of a composite or combination packaging together with any absorbent materials, cushioning and any other components necessary to contain and protect inner receptacles or inner packagings.

**Overpack.** An enclosure used by a single shipper to contain one or more packages and to form one handling unit for convenience of handling and stowage.

*Note.— A unit load device is not included in this definition.*

**Package.** The complete product of the packing operation, consisting of the packaging and its contents prepared for transport.

≠ **Packaging.** One or more receptacles and any other components or materials necessary for the receptacles to perform their containment and other safety functions.

*Note.— For radioactive material, see 2;7.1.3.*

**Passenger aircraft.** An aircraft that carries any person other than a crew member, an operator's employee in an official capacity, an authorized representative of an appropriate national authority or a person accompanying a consignment or other cargo.

**Pilot-in-command.** The pilot designated by the operator, or in the case of general aviation, the owner, as being in command and charged with the safe conduct of a flight.

**Portable tanks.** For the definition of portable tanks, see Part S-4, Chapter 12 of the Supplement.

**Pressure drums.** (See UN Recommendations, Chapter 1.2). Not permitted for air transport.

**Pyrotechnic substance.** A mixture or compound designed to produce an effect by heat, light, sound, gas or smoke or a combination of these as the result of non-detonative, self-sustaining, exothermic, chemical reactions.

**Quality assurance.** A systematic programme of controls and inspections applied by any organization or body which is aimed at providing adequate confidence that the standard of safety prescribed by these Instructions is achieved in practice.

≠ **Radiation level.** For the transport of Class 7 material, the corresponding dose rate expressed in millisieverts per hour.

≠ **Radioactive contents.** For the transport of Class 7 material, the radioactive material together with any contaminated or activated solids, liquids, and gases within the packaging.

**Receptacles.** Containment vessels for receiving and holding substances or articles, including any means of closing.

**Reconditioned packagings** include:

- a) metal drums that are:
  - i) cleaned to original materials of construction, with all former contents, internal and external corrosion, and external coatings and labels removed;
  - ii) restored to original shape and contour, with chimes (if any) straightened and sealed, and all non-integral gaskets replaced; and
  - iii) inspected after cleaning but before painting, with rejection of packagings with visible pitting, significant reduction in material thickness, metal fatigue, damaged threads or closures, or other significant defects;
- b) plastic drums and jerricans that:
  - i) are cleaned to original materials of construction, with all former contents, external coatings and labels removed;
  - ii) have all non-integral gaskets replaced; and
  - iii) are inspected after cleaning with rejection of packagings with visible damage such as tears, creases or cracks, or damaged threads or closures or other significant defects.

*Note.— It is anticipated that further examples will be added in future.*

**Recycled plastic material.** Material recovered from used industrial packagings that has been cleaned and prepared for processing into new packagings. The specific properties of the recycled material used for production of new packagings must be assured and documented regularly as part of a quality assurance programme recognized by the appropriate national authority. The quality assurance programme must include a record of proper pre-sorting and verification that each batch of recycled plastic material has the proper melt flow rate, density, and tensile yield strength, consistent with that of the design type manufactured from such recycled material. This necessarily includes knowledge about the packaging material from which the recycled plastic has been derived, as well as awareness of the prior contents of those packagings if those prior contents might reduce the capability of new packagings produced using that material. In addition, the packaging manufacturer's quality assurance programme must include performance of the mechanical design type test in Part 6, Chapter 4 on packagings manufactured from each batch of recycled plastic material. In this testing, stacking performance may be verified by appropriate dynamic compression testing rather than static load testing.

+ *Note.— ISO 16103:2005 "Packaging — Transport packages for dangerous goods — Recycled plastics material", provides additional guidance on procedures to be followed in approving the use of recycled plastics material.*

**Remanufactured packagings** include:

- a) metal drums that:
  - i) are produced as a UN type from a non-UN type;
  - ii) are converted from one UN type to another UN type; or

- iii) undergo the replacement of integral structural components (such as non-removable heads);
- b) plastic drums that:
  - i) are converted from one UN type to another UN type (e.g. 1H1 to 1H2); or
  - ii) undergo the replacement of integral structural components.

Remanufactured drums are subject to the same requirements of these Instructions as apply to a new drum of the same type.

**Reused packagings.** Packagings to be refilled which have been examined and found free of defects affecting the ability to withstand the performance tests; the term includes those which are refilled with the same or similar compatible contents and are transported within distribution chains controlled by the shipper of the product.

**Salvage packagings.** Special packagings into which damaged, defective, leaking or nonconforming dangerous goods packages, or dangerous goods that have spilled or leaked, are placed for purposes of transport for recovery or disposal.

**Self-accelerating decomposition temperature (SADT).** The lowest temperature at which self-accelerating decomposition may occur with a substance in the packaging as used in transport.

**Serious injury.** An injury which is sustained by a person in an accident and which:

- a) requires hospitalization for more than 48 hours, commencing within seven days from the date the injury was received; or
- b) results in a fracture of any bone (except simple fractures of fingers, toes or nose); or
- c) involves lacerations which cause severe haemorrhage, nerve, muscle or tendon damage; or
- d) involves injury to any internal organ; or
- e) involves second or third degree burns, or any burns affecting more than 5 per cent of the body surface; or
- f) involves verified exposure to infectious substances or injurious radiation.

**Settled pressure.** The pressure of the contents of a pressure receptacle in thermal and diffusive equilibrium.

**Shipment.** The specific movement of a consignment from origin to destination.

**Siftproof packagings.** Packagings impermeable to dry contents including fine solid material produced during transport.

**Single packagings.** Packagings which do not require any inner packaging to perform their containment function during transport.

**Solid dangerous goods.** Dangerous goods, other than gases, that do not meet the definition of Liquid dangerous goods.

**State of Origin.** The State in the territory of which the cargo was first loaded on an aircraft.

**State of Registry.** The State on whose register the aircraft is entered.

**State of the Operator.** The State in which the operator's principal place of business is located or, if there is no such place of business, the operator's permanent residence.

**Stores (supplies).** a) Stores (supplies) for consumption; and b) Stores (supplies) to be taken away.

*Stores (supplies) for consumption.* Goods, whether or not sold, intended for consumption by the passengers and the crew on board aircraft, and goods necessary for the operation and maintenance of aircraft, including fuel and lubricants.

*Stores (supplies) to be taken away.* Goods for sale to the passengers and the crew of aircraft with a view to being landed.

**Tank.** A tank container, portable tank, a road tank vehicle, a rail tank wagon or a receptacle intended to contain solids, liquids, or gases and has a capacity of not less than 450 litres when used for the transport of substances of Class 2. A tank container must be capable of being carried on land or on sea and of being loaded and discharged without the need of removal of its structural equipment, must possess stabilizing members and tie-down attachments external to the shell, and must be capable of being lifted when full.

*Note 1. — These Technical Instructions do not permit the use of a tank for the transport of radioactive material by air.*

*Note 2. — The definition of "tank" does not include packages of uranium hexafluoride.*

**Test pressure.** The required pressure applied during a pressure test for qualification or re-qualification.

- + **Transport index (TI) assigned to a package, overpack or freight container.** For the transport of Class 7 material, a number which is used to provide control over radiation exposure.

**UNECE.** The United Nations Economic Commission for Europe (UNECE, Palais des Nations, 8-14 avenue de la Paix, CH-1211 Geneva 10, Switzerland).

**Unit load device.** Any type of freight container, aircraft container, aircraft pallet with a net or aircraft pallet with a net over an igloo.

*Note 1.— An overpack is not included in this definition.*

*Note 2.— A freight container for radioactive material is not included in this definition (see 2;7.1.3).*

**UN number.** The four-digit number assigned by the United Nations Committee of Experts on the Transport of Dangerous Goods to identify a substance or a particular group of substances.

**Working pressure.** The settled pressure of a compressed gas at a reference temperature of 15°C in a full pressure receptacle.

### 3.1.2 Clarifying examples for certain defined terms

The following explanations and examples are meant to assist in clarifying the use of some of the packaging terms defined in this section.

The definitions in this section are consistent with the use of defined terms throughout the Instructions. However, some of the defined terms are commonly used in other ways. This is particularly evident in respect of the term “inner receptacle” which has often been used to describe the “inners” of a combination packaging.

The “inners” of “combination packagings” are always termed “inner packagings” not “inner receptacles”. A glass bottle is an example of such an “inner packaging”.

The “inners” of “composite packagings” are normally termed “inner receptacles”. For example, the “inner” of a 6HA1 composite packaging (plastic material) is such an “inner receptacle” since it is normally not designed to perform a containment function without its “outer packaging” and is therefore not an “inner packaging”.

## 3.2 UNITS OF MEASUREMENT AND CONVERSION FACTORS

### 3.2.1 Units of measurement

The units of measurement to be used in the transport of dangerous goods by air are those specified by the International System (SI) as modified for international civil aviation by Annex 5 to the Chicago Convention. The primary units of mass and volume will be the kilogram (kg) and the litre (L) and the unit of pressure will be the kilopascal (kPa). Except as specifically provided for in these Technical Instructions, only those abbreviations for units of measurement that are indicated in this paragraph, or in Annex 5 to the Chicago Convention, may be used in the transport of dangerous goods by air.

*Note.— Where measurements relating to radioactivity occur in these Instructions, the value is given in SI units followed, in parentheses, by the non-SI equivalent.*

### 3.2.2 Non-SI equivalents

It is recognized that there are in existence many packagings which were designed and constructed for use with non-SI quantity limitations and that such packagings will continue to be used for some time to come. Table 1-1 therefore contains a list of authorized non-SI equivalents for quantity limitations expressed in SI units. It is stressed that these are not precise equivalents but are nevertheless acceptable based upon the likely availability of packaging.

### 3.2.3 Conversion factors

Precise conversion factors for commonly used SI units are given in Annex 5 to the Chicago Convention. Tables 1-2 and 1-3 show conversion factors, to four significant figures, for some units widely used in dangerous goods transport.

**Table 1-1. Authorized equivalents**

<i>Litres</i>	<i>Volume</i>	
	<i>Imperial</i>	<i>U.S.</i>
0.5	1 pt	1 pt
1	1 qt	1 qt
2	2 qt	2 qt
2.5	5 pt	5 pt
5	1 gal	1.25 gal
10	2 gal	2.5 gal
15	3 gal	3.75 gal
20	4.25 gal	5 gal
25	5.5 gal	6.25 gal
30	6.5 gal	7.5 gal
42	9 gal	11 gal
50	11 gal	13 gal
60	13 gal	15 gal
100	22 gal	25 gal
120	26 gal	30 gal
220	48 gal	55 gal
250	55 gal	62.5 gal

*Note.— Where quantities are specified in SI units of mass, for 500 kg or less, quantities expressed in pounds may be substituted on the basis of one pound per 500 grams.*

**Table 1-2. Conversion to SI units\***

<i>To convert</i>	<i>to</i>	<i>Multiply by</i>
bar	kilopascals (kPa)	100.0

\* Where a prefix is used, it indicates a multiplying factor as follows:

tera (T)	$\times 10^{12}$
giga (G)	$\times 10^9$
mega (M)	$\times 10^6$
kilo (k)	$\times 10^3$
milli (m)	$\times 10^{-3}$
micro ( $\mu$ )	$\times 10^{-6}$
nano (n)	$\times 10^{-9}$

## INTRODUCTORY NOTE

The successful application of regulations concerning the transport of dangerous goods and the achievement of their objectives are greatly dependent on the appreciation by all individuals concerned of the risks involved and on a detailed understanding of the regulations. This can only be achieved by properly planned and maintained initial and recurrent training programmes in the transport of dangerous goods for all persons concerned.

## Chapter 4

### TRAINING

*Parts of this Chapter are affected by State Variations AE 2, CA 18, HK 1;  
see Table A-1*

#### 4.1 ESTABLISHMENT OF TRAINING PROGRAMMES

4.1.1 Initial and recurrent dangerous goods training programmes must be established and maintained by or on behalf of:

- a) shippers of dangerous goods, including packers and persons or organizations undertaking the responsibilities of the shipper;
- b) operators;
- c) ground handling agencies which perform, on behalf of the operator, the act of accepting, handling, loading, unloading, transferring or other processing of cargo, mail or stores;
- d) ground handling agencies located at an airport which perform, on behalf of the operator, the act of processing passengers;
- e) agencies, not located at an airport, which perform, on behalf of the operator, the act of checking in passengers;
- f) freight forwarders; and
- g) agencies engaged in the security screening of passengers and their baggage and/or cargo, mail or stores.

4.1.2 Dangerous goods training programmes required by 4.1.1 b) must be subjected to review and approval by the appropriate authority of the State of the Operator. Dangerous goods training programmes required by other than 4.1.1 b) should be subjected to review and approval as determined by the appropriate national authority.

#### 4.2 TRAINING CURRICULA

4.2.1 Personnel must receive training in the requirements commensurate with their responsibilities. Such training must include:

- a) general familiarization training — which must be aimed at providing familiarity with the general provisions;
- b) function-specific training — which must provide detailed training in the requirements applicable to the function for which that person is responsible; and
- c) safety training — which must cover the hazards presented by dangerous goods, safe handling and emergency response procedures.

4.2.2 Training must be provided or verified upon the employment of personnel identified in the categories specified in Table 1-4.

≠ 4.2.3 Recurrent training must take place within 24 months of previous training to ensure knowledge is current. However, if recurrent training is completed within the final three months of validity of previous training, the period of validity extends from the date on which the recurrent training was completed until 24 months from the expiry date of that previous training.

4.2.4 A test to verify understanding must be undertaken following training. Confirmation that the test has been completed satisfactorily is required.

4.2.5 A record of training must be maintained which must include:

- a) the individual's name;
- b) the most recent training completion date;
- c) a description, copy or reference to training materials used to meet the training requirements;
- d) the name and address of the organization providing the training; and
- e) evidence which shows that a test has been completed satisfactorily.

≠ The records of training must be retained for a minimum period of 36 months from the most recent training completion date and must be made available upon request to the appropriate national authority.

4.2.6 The subject matter relating to dangerous goods transport with which various categories of personnel should be familiar is indicated in Table 1-4.

+ 4.2.7 Staff of operators not carrying dangerous goods as cargo, mail or stores must be trained commensurate with their responsibilities. The subject matter to which their various categories of staff should be familiar with is indicated in Table 1-5.

≠ **Table 1-4. Content of training courses for operators carrying dangerous goods as cargo**

≠ Aspects of transport of dangerous goods by air with which they should be familiar, as a minimum	Shippers and packers		Freight forwarders				Operators and ground handling agents					Security staff

#### KEY

- 1 — Shippers and persons undertaking the responsibilities of shippers
- 2 — Packers
- 3 — Staff of freight forwarders involved in processing dangerous goods
- 4 — Staff of freight forwarders involved in processing cargo, mail or stores (other than dangerous goods)
- 5 — Staff of freight forwarders involved in the handling, storage and loading of cargo, mail or stores
- 6 — Operator's and ground handling agent's staff accepting dangerous goods
- 7 — Operator's and ground handling agent's staff accepting cargo, mail or stores (other than dangerous goods)
- ≠ 8 — Operator's and ground handling agent's staff involved in the handling, storage and loading of cargo, mail or stores and baggage
- 9 — Passenger-handling staff
- 10 — Flight crew members and load planners
- 11 — Crew members (other than flight crew members)
- ≠ 12 — Security staff who are involved with the screening of passengers and their baggage and cargo, mail and stores, e.g. security screeners, their supervisors and staff involved in implementing security procedures

+ **Table 1-5. Content of training courses for operators not carrying dangerous goods as cargo**

Contents	7	8	9	10	11
General philosophy	X	X	X	X	X
Limitations	X	X	X	X	X
Labelling and marking	X	X	X	X	X
Dangerous goods transport document and other relevant documentation	X				
Recognition of undeclared dangerous goods	X	X	X	X	X
Provisions for passengers and crew	X	X	X	X	X
Emergency procedures	X	X	X	X	X

**KEY**

- 7 — Operator's and ground handling agent's staff accepting cargo, mail or stores (other than dangerous goods)  
 8 — Operator's and ground handling agent's staff involved in the handling, storage and loading of cargo, mail or stores (other than dangerous goods) and baggage  
 9 — Passenger handling staff  
 10 — Flight crew members and load planners  
 11 — Crew members (other than flight crew members)

≠ *Note 1. — Depending on the responsibilities of the person, the aspects of training to be covered may vary from those shown in Tables 1-4 and 1-5. For example, in respect of classification, staff involved in implementing security procedures (e.g. screeners and their supervisors) need only be trained in the general properties of dangerous goods.*

*Note 2. — The categories of personnel identified in Tables 1-4 and 1-5 are not all encompassing. Personnel employed by or interacting with the aviation industry in areas such as passenger and cargo reservation centres, and engineering and maintenance, except when acting in a capacity identified in Table 1-4 or 1-5, should be provided with dangerous goods training in accordance with 4.2.*

**4.3 INSTRUCTOR QUALIFICATIONS**

4.3.1 Unless otherwise provided for by the appropriate national authority, instructors of initial and recurrent dangerous goods training programmes must have adequate instructional skills and have successfully completed a dangerous goods training programme in the applicable category, or Category 6, prior to delivering such a dangerous goods training programme.

4.3.2 Instructors delivering initial and recurrent dangerous goods training programmes must at least every 24 months deliver such courses, or in the absence of this attend recurrent training.

## Chapter 5

### DANGEROUS GOODS SECURITY

*Parts of this Chapter are affected by State Variation US 17; see Table A-1*

*Note.— This Chapter addresses the security responsibilities of operators, shippers and others involved in the transport of dangerous goods aboard aircraft. It should be noted that Annex 17 — Security, provides comprehensive requirements for implementation of security measures by States to prevent unlawful interference with civil aviation or when such interference has been committed. In addition, the Security Manual for Safeguarding Civil Aviation against Acts of Unlawful Interference (Doc 8973 — Restricted) provides procedures and guidance on aspects of aviation security and is intended to assist States in the implementation of their respective national civil aviation security programmes. The requirements in the Chapter are intended to supplement the requirements of Annex 17 and to implement measures to be taken to minimize theft or misuse of dangerous goods that may endanger persons or property. The provisions of this Chapter do not supersede requirements of Annex 17 or the Security Manual.*

#### 5.1 GENERAL SECURITY PROVISIONS

5.1.1 All persons engaged in the transport of dangerous goods should consider security requirements for the dangerous goods commensurate with their responsibilities.

5.1.2 Dangerous goods should only be offered to operators that have been appropriately identified.

#### 5.2 SECURITY TRAINING

5.2.1 The training specified in 4.2 should include elements of security awareness.

5.2.2 Security awareness training should address the nature of security risks, recognizing security risks methods to address and reduce such risks, and actions to be taken in the event of a security breach. It should include awareness of security plans (if appropriate) commensurate with the responsibilities of individuals and their part in implementing security plans.

*Note.— Persons who have received security training in accordance with the requirements of a national security plan or other security requirements that fulfil the elements of 5.2.2 need not receive additional training.*

5.2.3 Such training should be provided or verified upon employment in a position involving dangerous goods transport. Recurrent training should take place within 24 months of previous training to ensure knowledge is current.

5.2.4 Records of all security training undertaken should be kept by the employer and made available to the employee, if requested.

#### 5.3 SECURITY PLANS

5.3.1 Operators, shippers and others engaged in the transport of high consequence dangerous goods should adopt, implement and comply with a security plan that addresses at least the elements specified in 5.3.2. High consequence dangerous goods are those which have the potential for misuse in a terrorist incident and which may, as a result, produce serious consequences such as mass casualties or mass destruction. An indicative list of high consequence dangerous goods is provided in Table 1-6.

*Note.— When national authorities issue exemptions, they should consider all of the provisions in this Chapter.*

5.3.2 The security plan should comprise at least the following elements:

- a) specific allocation of responsibilities for security to competent and qualified persons with appropriate authority to carry out their responsibilities;
- b) records of dangerous goods or types of dangerous goods transported;
- c) review of current operations and assessment of vulnerabilities, including inter-modal transfer, temporary transit storage, handling, and distribution, as appropriate;

- d) clear statement of measures including training policies (including response to higher threat conditions, new employee/employment verifications, etc.), operating practices (e.g. access to dangerous goods in temporary storage proximity to vulnerable infrastructure, etc.), equipment and resources that are to be used to reduce security risks;
- e) effective and up-to-date procedures for reporting and dealing with security threats, breaches of security or security incidents;
- f) procedures for the evaluation and testing of security plans and procedures for periodic review and update of the plans;
- g) measures to ensure the security of transport information contained in the plan; and
- h) measures to ensure that the security of the distribution of transport documentation is limited as far as possible. (Such measures must not preclude provision of the transport documentation required by Part 5, Chapter 4 of these Instructions.)

*Note.— Operators, shippers and others with responsibilities for the safe and secure transport of dangerous goods should cooperate with each other and with appropriate authorities to exchange threat information, apply appropriate security measures and respond to security incidents.*

#### 5.4 RADIOACTIVE MATERIAL

- ≠ For radioactive material, the provisions of this Chapter are deemed to be complied with when the provisions of the Convention on Physical Protection of Nuclear Material and of IAEA INFCIRC/225 (Rev.4) are applied.

**Table 1-6. Indicative list of high consequence dangerous goods**

Class 1 Division 1.1 explosives
Class 1 Division 1.2 explosives
Class 1 Division 1.3 compatibility group C explosives
+ Class 1 Division 1.4 UN Nos. 0104, 0237, 0255, 0267, 0289, 0361, 0365, 0366, 0440, 0441, 0455, 0456 and 0500
+ Class 1 Division 1.5 explosives
Division 2.3 toxic gases (excluding aerosols)
+ Class 3 desensitized explosives
+ Division 4.1 desensitized explosives
Division 6.1 substances of Packing Group 1; except when transported under the excepted quantity provisions in 3;5
Division 6.2 infectious substances of Category A (UN Nos. 2814 and 2900)
Class 7 radioactive materials in quantities greater than 3000 A <sub>1</sub> (special form) or 3000 A <sub>2</sub> , as applicable in Type B and Type C packages.

## Chapter 6

### GENERAL PROVISIONS CONCERNING CLASS 7

*Parts of this Chapter are affected by State Variations JP 3, JP 23, RU 1; see Table A-1*

#### 6.1 SCOPE AND APPLICATION

6.1.1 These Instructions establish standards of safety which provide an acceptable level of control of the radiation, criticality and thermal hazards to persons, property and the environment that are associated with the transport of radioactive material. These Instructions are based on the IAEA *Regulations for the Safe Transport of Radioactive Material*, (2005 Edition), Safety Standards Series No. TS-R-1, IAEA, Vienna (2005). Explanatory material on the 1996 edition of TS-R-1 can be found in *Advisory Material for the IAEA Regulations for the Safe Transport of Radioactive Material*, Safety Standard Series No. TS-G-1.1 (ST-2), IAEA, Vienna (2002).

6.1.2 The objective of these Instructions is to protect persons, property and the environment from the effects of radiation during the transport of radioactive material. This protection is achieved by requiring:

- a) containment of the radioactive contents;
- b) control of external radiation levels;
- c) prevention of criticality; and
- d) prevention of damage caused by heat.

These requirements are satisfied firstly by applying a graded approach to the limits of the contents for packages and aircraft and to the performance standards, which are applied to package designs depending upon the hazard of the radioactive contents. Secondly, they are satisfied by imposing requirements on the design and operation of packages and on the maintenance of the packagings, including consideration of the nature of the radioactive contents. Finally, they are satisfied by requiring administrative controls including, where appropriate, approval by competent authorities.

6.1.3 These Instructions apply to the transport of radioactive material by air, including transport that is incidental to the use of the radioactive material. Transport comprises all operations and conditions associated with and involved in the movement of radioactive material; these include the design, manufacture, maintenance and repair of packaging, and the preparation, consigning, loading, carriage including in-transit storage, unloading and receipt at the final destination of the radioactive material and packages. A graded approach is applied to the performance standards in these Instructions that is characterized by three general severity levels:

- a) routine conditions of transport (incident free);
- b) normal conditions of transport (minor mishaps); and
- c) accident conditions of transport.

6.1.4 These Instructions do not apply to:

- a) radioactive material implanted or incorporated into a person or live animal for diagnosis or treatment;
- b) radioactive material in consumer products which have received regulatory approval, following their sale to the end user;
- c) natural material and ores containing naturally occurring radionuclides which are either in their natural state or have only been processed for purposes other than for extraction of the radionuclides, and are not intended to be processed for use of these radionuclides, provided the activity concentration of the material does not exceed 10 times the values specified in 2;7.2.2.1 b) or calculated in accordance with 2;7.2.2.2 to 7.2.2.6;
- d) non-radioactive solid objects with radioactive substances present on any surfaces in quantities not in excess of the limit specified in the definition of contamination in 2;7.1.

#### 6.1.5 Specific provisions for the transport of excepted packages

6.1.5.1 Excepted packages which contain radioactive material in limited quantities, instruments, manufactured articles and empty packages as specified in 2;7.2.4.1.1 are subject only to the following provisions of Parts 5 to 7:

- a) the applicable provisions specified in 5;1.1 i), 5;1.4, 5;1.6.3, 5;1.7, 5;2.2, 5;2.4.2, 5;2.4.5.1 a), 5;2.4.5.1 e), 5;3.2.11 b), 5;3.2.11 e), 5;4.1.4.1 a), 5;4.4 and 7;3.2.2;
- b) the requirements for excepted packages specified in 6;7.3; and
- c) if the excepted package contains fissile material, one of the fissile exceptions provided by 2;7.2.3.5 must apply and the requirement of 6;7.6.2 must be met.

6.1.5.2 Excepted packages must be subject to the relevant provisions of all other parts of these Instructions.

## 6.2 RADIATION PROTECTION PROGRAMME

6.2.1 The transport of radioactive material must be subject to a radiation protection programme, which must consist of systematic arrangements aimed at providing adequate consideration of radiation protection measures.

6.2.2 Protection and safety must be optimized in order that the magnitude of individual doses, the number of persons exposed, and the likelihood of incurring exposure must be kept as low as reasonably achievable, economic and social factors being taken into account, and doses to persons must be below the relevant dose limits. A structured and systematic approach must be adopted and must include consideration of the interfaces between transport and other activities.

6.2.3 The nature and extent of the measures to be employed in the programme must be related to the magnitude and likelihood of radiation exposure. The programme must incorporate the requirements in 6.2.2 and 6.2.4 to 6.2.7. Programme documents must be available, on request, for inspection by the relevant competent authority.

6.2.4 For occupational exposure arising from transport activities, where it is assessed that the effective dose:

- a) is likely to be between 1 and 6 mSv in a year, a dose assessment programme via workplace monitoring or individual monitoring must be conducted; and
- b) is likely to exceed 6 mSv in a year, individual monitoring must be conducted.

When individual monitoring or workplace monitoring is conducted, appropriate records must be kept.

*Note.— For occupational exposure arising from transport activities, where it is assessed that the effective dose is most unlikely to exceed 1 mSv in a year, no special work patterns, detailed monitoring, dose assessment programmes or individual record-keeping need be required.*

6.2.5 In the event of accidents or incidents during the transport of radioactive material, emergency provisions, as established by relevant national and/or international organizations, must be observed to protect persons, property and the environment. Appropriate guidelines for such provisions are contained in "Planning and Preparing for Emergency Response to Transport Accidents Involving Radioactive Material", Safety Standard Series No. TS-G-1.2 (ST-3), IAEA, Vienna (2002).

6.2.6 Emergency procedures must take into account the formation of other dangerous substances that may result from the reaction between the contents of a consignment and the environment in the event of an accident.

6.2.7 Workers must receive appropriate training concerning the radiation hazards involved and the precautions to be observed in order to ensure restriction of their exposure and that of other persons who might be affected by their actions.

## 6.3 QUALITY ASSURANCE

Quality assurance programmes based on international, national or other standards acceptable to the competent authority must be established and implemented for the design, manufacture, testing, documentation, use, maintenance and inspection of all special form radioactive material, low dispersible radioactive material and packages, and for transport and in-transit storage operations to ensure compliance with the relevant provisions of these Instructions. Certification that the design specification has been fully implemented must be available to the competent authority. The manufacturer, shipper or user must be prepared to provide facilities for competent authority inspection during manufacture and use and to demonstrate to any cognizant competent authority that:

- a) the manufacturing methods and materials used are in accordance with the approved design specifications; and
- b) all packagings are periodically inspected and, as necessary, repaired and maintained in good condition so that they continue to comply with all relevant requirements and specifications, even after repeated use.

Where competent authority approval is required, such approval must take into account and be contingent upon the adequacy of the quality assurance programme.

#### 6.4 SPECIAL ARRANGEMENT

6.4.1 Special arrangement means those provisions, approved by the competent authority, under which consignments which do not satisfy all the requirements of these Instructions applicable to radioactive material may be transported.

6.4.2 Consignments for which conformity with any provision applicable to Class 7 is impracticable must not be transported except under special arrangement. Provided the competent authority is satisfied that conformity with the Class 7 provisions of these Instructions is impracticable and that the requisite standards of safety established by these Instructions have been demonstrated through alternative means, the competent authority may approve special arrangement transport operations for a single consignment or a planned series of multiple consignments. The overall level of safety in transport must be at least equivalent to that which would be provided if all the applicable requirements had been met. For international consignments of this type, multilateral approval must be required.

#### 6.5 RADIOACTIVE MATERIAL POSSESSING OTHER DANGEROUS PROPERTIES

6.5.1 In addition to the radioactive and fissile properties, any subsidiary risk of the contents of a package, such as explosiveness, flammability, pyrophoricity, chemical toxicity and corrosiveness, must also be taken into account in the documentation, packing, labelling, marking, placarding, stowage, segregation and transport, in order to be in compliance with all relevant provisions for dangerous goods of these Instructions.

#### 6.6 NON-COMPLIANCE

In the event of a non-compliance with any limit in these Instructions applicable to radiation level or contamination:

- a) the shipper must be informed of the non-compliance by the operator if the non-compliance is identified during transport;  
or
- b) the shipper and the operator must be informed of the non-compliance by the consignee if the non-compliance is identified at receipt;
- c) the operator, shipper or consignee, as appropriate, must:
  - i) take immediate steps to mitigate the consequences of the non-compliance;
  - ii) investigate the non-compliance and its causes, circumstances and consequences;
  - iii) take appropriate action to remedy the causes and circumstances that led to the non-compliance and to prevent a recurrence of similar circumstances that led to the non-compliance; and
  - iv) communicate to the relevant competent authority(ies) the causes of the non-compliance and corrective or preventative actions taken or to be taken; and
- d) the communication of the non-compliance to the shipper and relevant competent authority(ies), respectively, must be made as soon as practicable and it must be immediate whenever an emergency exposure situation has developed or is developing.

**Part 2**

**CLASSIFICATION OF DANGEROUS GOODS**

## INTRODUCTORY CHAPTER

*Parts of this Chapter are affected by State Variations DE 5, NL 4; see Table A-1*

### 1. RESPONSIBILITIES

Classification must be made by the appropriate national authority when so required or may otherwise be made by the shipper.

### 2. CLASSES, DIVISIONS, PACKING GROUPS — DEFINITIONS

2.1 Substances (including mixtures and solutions) and articles subject to these Instructions are assigned to one of nine classes according to the hazard or the most predominant of the hazards they present. Some of these classes are subdivided into divisions. These classes and divisions are:

#### Class 1: Explosives

- Division 1.1: Substances and articles which have a mass explosion hazard
- Division 1.2: Substances and articles which have a projection hazard but not a mass explosion hazard
- Division 1.3: Substances and articles which have a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard
- Division 1.4: Substances and articles which present no significant hazard
- Division 1.5: Very insensitive substances which have a mass explosion hazard
- Division 1.6: Extremely insensitive articles which do not have a mass explosion hazard

#### Class 2: Gases

- Division 2.1: Flammable gases
- Division 2.2: Non-flammable, non-toxic gases
- Division 2.3: Toxic gases

#### Class 3: Flammable liquids

Class 4: Flammable solids; substances liable to spontaneous combustion; substances which, on contact with water, emit flammable gases

- Division 4.1: Flammable solids, self-reactive and related substances and desensitized explosives
- Division 4.2: Substances liable to spontaneous combustion
- Division 4.3: Substances which, in contact with water, emit flammable gases

#### Class 5: Oxidizing substances and organic peroxides

- Division 5.1: Oxidizing substances
- Division 5.2: Organic peroxides

#### Class 6: Toxic and infectious substances

- Division 6.1: Toxic substances
- Division 6.2: Infectious substances

#### Class 7: Radioactive material

#### Class 8: Corrosive substances

#### Class 9: Miscellaneous dangerous substances and articles

The numerical order of the classes and divisions is not that of the degree of danger.

2.2 Many of the substances assigned to Classes 1 to 9 are deemed, without additional labelling, as being environmentally hazardous.

2.3 Wastes must be transported under the requirements of the appropriate class considering their hazards and the criteria in these Instructions. Wastes not otherwise subject to these Instructions, but covered under the Basel Convention, may be transported under Class 9.

2.4 For packing purposes, substances other than those of Classes 1, 2 and 7, Divisions 5.2 and 6.2 and other than self-reactive substances of Division 4.1 are assigned to three packing groups in accordance with the degree of danger they present.

- Packing Group I: Substances presenting high danger
- Packing Group II: Substances presenting medium danger
- Packing Group III: Substances presenting low danger

The packing group to which a substance is assigned is indicated in the Dangerous Goods List in Part 3, Chapter 2, Table 3-1.

2.5 Dangerous goods are determined to present one or more of the dangers represented by Classes 1 to 9 and divisions and, if applicable, the degree of danger on the basis of the requirements in Part 2, Chapters 1 to 9.

2.6 Dangerous goods presenting a danger of a single class and division are assigned to that class and division and the degree of danger (packing group), if applicable, determined. When an article or substance is specifically listed by name in the Dangerous Goods List (Table 3-1), its class or division, its subsidiary risk(s) and, when applicable, its packing group are taken from this list.

2.7 Where a substance or article is not specifically listed by name in Table 3-1 and there are two or more hazards of Class 3, 4 or 8 or Division 5.1 or 6.1 associated with its air transport in that it meets the definition for two of those classes or divisions as shown in Part 2, Chapters 1 to 9, it must be classified in accordance with the precedence of hazards table (Table 2-1).

### 3. UN NUMBERS AND PROPER SHIPPING NAMES

3.1 Dangerous goods are assigned to UN numbers and proper shipping names according to their hazard classification and their composition.

3.2 Dangerous goods commonly carried are listed in Table 3-1. Where an article or substance is specifically listed by name, it shall be identified in transport by the proper shipping name in Table 3-1. For dangerous goods not specifically listed by name, "generic" or "not otherwise specified (n.o.s.)" entries are provided (see 3.9) to identify the article or substance in transport. Each entry in Table 3-1 is characterized by a UN number. Table 3-1 also contains relevant information for each entry, such as hazard class, subsidiary risk(s) (if any), packing group (where assigned), packing requirements, passenger and cargo aircraft requirements, etc. Entries in Table 3-1 are of the following four types:

- a) Single entries for well-defined substances or articles

e.g. <b>Acetone</b>	UN 1090
<b>Ethyl nitrite solution</b>	UN 1194

- b) Generic entries for a well-defined group of substances or articles

e.g. <b>Adhesives</b>	UN 1133
<b>Perfumery product</b>	UN 1266
<b>Carbamate pesticide, solid, toxic</b>	UN 2757
<b>Organic peroxide Type B, liquid;</b>	UN 3101

- c) Specific n.o.s. entries covering a group of substances or articles of a particular chemical or technical nature

e.g. <b>Nitrates, inorganic, n.o.s.</b>	UN 1477
<b>Alcohols, n.o.s.</b>	UN 1987

- d) General n.o.s. entries covering a group of substances or articles meeting the criteria of one or more classes or divisions

e.g. <b>Flammable solid, organic, n.o.s.</b>	UN 1325
<b>Flammable liquid, n.o.s.</b>	UN 1993

3.3 All self-reactive substances of Division 4.1 are assigned to one of twenty generic entries in accordance with the classification principles and flow chart described in the UN Recommendations, 2.4.2.3.3.

3.4 All organic peroxides of Division 5.2 are assigned to one of twenty generic entries in accordance with the classification principles and flow chart described in the UN Recommendations, 2.5.3.3.

3.5 A mixture or solution containing a single dangerous substance specifically listed by name in Table 3-1 and one or more substances not subject to these Instructions must be assigned the UN number and proper shipping name of the dangerous substance, unless:

- a) the mixture or solution is specifically identified by name in these Instructions; or
- b) the entry in these Instructions specifically indicates that it applies only to the pure substance; or
- c) the hazard class or division, physical state or packing group of the solution or mixture is different from that of the dangerous substances; or
- d) there is significant change in the measures to be taken in emergencies.

3.6 In those other cases, except the one described in a), the mixture or solution must be treated as a dangerous substance not specifically listed by name in Table 3-1.

3.7 For a solution or mixture when the hazard class, the physical state or the packing group is changed in comparison with the listed substance, the appropriate n.o.s. entry must be used including its packaging and labelling provisions.

3.8 A mixture or solution containing one or more substances identified by name in Table 3-1 or classified under an n.o.s. entry and one or more substances not subject to these Instructions is not subject to these Instructions if the hazard characteristics of the mixture or solution are such that they do not meet the criteria (including human experience criteria) for any class.

3.9 Substances or articles which are not specifically listed by name in Table 3-1 must be classified under a "generic" or "n.o.s." entry. The substance or article must be classified according to the class definitions and test criteria in this Part, and is then assigned the generic or "n.o.s." entry in Table 3-1 which most appropriately describes the article or substance. This means that a substance<sup>1</sup> is to be assigned to an entry of type c), as defined in 3.2<sup>1</sup>, only if it cannot be assigned to an entry of type b), and to an entry of type d) if it cannot be assigned to an entry of type b) or c).

#### 4. PRECEDENCE OF HAZARD CHARACTERISTICS

4.1 The precedence of hazards table (Table 2-1) must be used to determine the class of a substance, mixture or solution having more than one risk, when it is not named in Table 3-1. For goods having multiple risks, which are not specifically listed by name in Table 3-1, the most stringent packing group denoted to the respective hazards of the goods takes precedence over other packing groups, irrespective of Table 2-1. The correct packing group to be used is also shown at the intersection of the two lines in Table 2-1. The precedence of hazard characteristics of the following have not been dealt with in Table 2-1, as the primary characteristics always take precedence. The correct packing group to be used is also shown at the intersection of the two lines in Table 2-1:

- a) substances and articles of Class 1;
- b) gases of Class 2;
- c) liquid desensitized explosives of Class 3;
- d) self-reactive substances and solid desensitized explosives of Division 4.1;
- e) pyrophoric substances of Division 4.2;
- f) substances of Division 5.2;
- g) substances of Division 6.1 with a Packing Group I inhalation toxicity. Except for substances or preparations meeting the criteria of Class 8 having an inhalation toxicity of dusts and mists (LC<sub>50</sub>) in the range of Packing Group I, but toxicity through oral ingestion or dermal contact only in the range of Packing Group III or less, which must be allocated to Class 8;
- h) substances of Division 6.2; and
- i) material of Class 7.

4.2 Apart from radioactive material in excepted packages (where the other hazardous properties take precedence), radioactive material having other hazardous properties must always be classified in Class 7 and the subsidiary risk must also be identified.

4.3 An article which, apart from its other hazards, also meets the criterion for a magnetized material, must be identified in accordance with the provisions of this section and in addition as a magnetized material.

---

1. See also the "List of n.o.s. and generic proper shipping names" in Attachment 1, Chapter 2.

## 5. TRANSPORT OF SAMPLES

5.1 When the hazard class of a substance is uncertain and it is being transported for further testing, a tentative hazard class, proper shipping name and identification number must be assigned on the basis of the shipper's knowledge of the substance and application of:

- a) the classification criteria of these Instructions; and
- b) the precedence of hazards given above.

The most severe packing group possible for the shipping name chosen must be used.

5.2 Where this provision is used, the proper shipping name must be supplemented with the word "sample" (e.g. **Flammable liquid, n.o.s., sample**). In certain instances, where a specific proper shipping name is provided for a sample of a substance considered to meet certain classification criteria (e.g. **Gas sample, non-pressurized, flammable, UN 3167**), that proper shipping name must be used. When an n.o.s. entry is used to transport the sample, the proper shipping name need not be supplemented with the technical name.

5.3 Samples of the substance must be transported in accordance with the requirements applicable to the tentative assigned proper shipping name provided:

- a) the substance is not considered to be a substance prohibited for transport by 1;2.1;
- b) the substance is not considered to meet the criteria for Class 1 or considered to be an infectious substance or a radioactive material;
- c) the substance is in compliance with 4.2.3.2.5 or 5.3.2.6, if it is a self-reactive substance or an organic peroxide, respectively;
- d) the sample is transported in a combination packaging with a net mass per package not exceeding 2.5 kg; and
- e) the sample is not packed together with other goods.

Table 2-1. Precedence of hazards and packing groups for Classes 3, 4 and 8 and for Divisions 5.1 and 6.1

Class or division and packing group	Class or division and packing group																	
	4.2 II	4.2 III	4.3 I	4.3 II	4.3 III	5.1 I	5.1 II	5.1 III	6.1 I (d)	6.1 I (o)	6.1 II	6.1 III	8 I (l)	8 I (s)	8 II (l)	8 II (s)	8 III (l)	8 III (s)

6.1 II (o)													8, I	8, I	8, II	6.1, II	6.1, II	6.1, II
6.1 III													8, I	8, I	8, II	8, II	8, III	8, III

(l) = liquid; (s) = solid; (i) = inhalation; (d) = dermal; (o) = oral; — = an impossible combination

\* Substances of Division 4.1 other than self-reactive substances, and solid desensitized explosives and substances of Class 3 other than liquid desensitized explosives.

\*\* For pesticides only, the primary risk must be Division 6.1.

## Chapter 1

### CLASS 1 — EXPLOSIVES

*Parts of this Chapter are affected by State Variations BE 2, DQ 2, GB 1, HK 3, US 5; see Table A-1*

*Note 1.— Class 1 is a restricted class, that is, only those explosive substances and articles that are listed in the Dangerous Goods List may be accepted for transport. However, the appropriate authorities of the States concerned retain the right by mutual agreement to approve transport of explosive substances and articles for special purposes under special conditions. Therefore, entries have been included in the Dangerous Goods List for “Substances, explosive, n.o.s.” and “Articles, explosive, n.o.s.”. It is intended that these entries be used only when no other method of operation is possible.*

*Note 2.— General entries, such as “Explosive, blasting, Type A”, are used to allow for the transport of new substances. In preparing these requirements, military ammunition and explosives have been taken into consideration to the extent that they are likely to be transported by civil aircraft.*

*Note 3.— A number of substances and articles which are in Class 1 are described in Attachment 2 to these Instructions. These descriptions are given because a term may not be well known or may be at variance with its usage for regulatory purposes.*

*Note 4. — Class 1 is unique in that the type of packaging frequently has a decisive effect on the hazard and therefore on the assignment to a particular division. The correct division is determined by use of the procedures provided in this Chapter.*

*Note 5. — Most of the explosives listed in Table 3-1 are not normally permitted for transport by air. Information concerning these explosives is included in Table 3-1 and in the Supplement to these Instructions to provide guidance for States in those cases where consideration is being given to granting exemptions in accordance with 1;1.1.2.*

#### 1.1 DEFINITIONS AND GENERAL PROVISIONS

Class 1 comprises:

- a) explosive substances (a substance that is not itself an explosive but which can form an explosive atmosphere of gas, vapour or dust is not included in Class 1), except those that are too dangerous to transport or those where the predominant hazard is appropriate to another class;
- b) explosive articles, except devices containing explosive substances in such quantity or of such a character that their inadvertent or accidental ignition or initiation during transport will not cause any effect external to the device either by projection, fire, smoke, heat or loud noise; and
- c) substances and articles not mentioned under 1.1 a) and b), which are manufactured with a view to producing a practical, explosive or pyrotechnic effect.

#### 1.2 DEFINITIONS

For the purposes of these Instructions, the following definitions apply:

- a) **Explosive substance** is a solid or liquid substance (or a mixture of substances) which is in itself capable, by chemical reaction, of producing gas at such a temperature and pressure and at such a speed as to cause damage to the surroundings. Pyrotechnic substances are included even when they do not evolve gases.
- b) **Pyrotechnic substance** is a substance or a mixture of substances designed to produce an effect by heat, light, sound, gas or smoke or a combination of these as the result of non-detonative, self-sustaining, exothermic, chemical reactions.
- c) **Explosive article** is an article containing one or more explosive substances.

*Note.— Explanations for a number of other terms used in connection with explosives can be found in Attachment 2 to these Instructions.*

### 1.3 DIVISIONS

1.3.1 Class 1 is divided into six divisions:

- a) Division 1.1 — Substances and articles which have a mass explosion hazard (a mass explosion is one which affects almost the entire load virtually instantaneously).
- b) Division 1.2 — Substances and articles which have a projection hazard but not a mass explosion hazard.
- c) Division 1.3 — Substances and articles which have a fire hazard and either a minor blast hazard or a minor projection hazard or both, but not a mass explosion hazard.

This division comprises substances and articles which:

- i) give rise to considerable radiant heat, or
  - ii) burn one after another, producing minor blast or projection effects or both.
- d) Division 1.4 — Substances and articles which present no significant hazard.

This division comprises substances and articles which present only a small hazard in the event of ignition or initiation during transport. The effects are largely confined to the package and no projection of fragments of appreciable size or range is to be expected. An external fire must not cause virtually instantaneous explosion of almost the entire contents of the package.

*Note.— Substances and articles of this division are in Compatibility Group S if they are so packaged or designed that any hazardous effects arising from accidental functioning are confined within the package, unless the package has been degraded by fire, in which case all blast or projection effects are limited to the extent that they do not significantly hinder fire fighting or other emergency response efforts in the immediate vicinity of the package.*

- e) Division 1.5 — Very insensitive substances which have a mass explosion hazard.

This division comprises substances which have a mass explosion hazard but are so insensitive that there is very little probability of initiation or of transition from burning to detonation under normal conditions of transport.

*Note.— For the normal conditions of transport, see Notes 3 to 5 of the Introductory Notes to Part 4.*

- f) Division 1.6 — Extremely insensitive articles which do not have a mass explosion hazard.

This division comprises articles which contain only extremely insensitive detonating substances and which demonstrate a negligible probability of accidental initiation or propagation.

*Note.— The risk from articles of Division 1.6 is limited to the explosion of a single article.*

1.3.2 Any substance or article having or suspected of having explosive characteristics must first be considered for classification in Class 1 in accordance with the procedures in 1.5.1.1 to 1.5.1.3. Goods are not classified in Class 1 when:

- a) unless specially authorized, the transport of an explosive substance is prohibited because sensitivity of the substance is excessive;
- b) the substance or article comes within the scope of those explosive substances and articles which are specifically excluded from Class 1 by the definition of this class; or
- c) the substance or article has no explosive properties.

### 1.4 COMPATIBILITY GROUPS

1.4.1 Goods of Class 1 are assigned to one of six divisions, depending on the type of hazard they present (see 1.3.1), and to one of thirteen compatibility groups which identify the kinds of explosive substances and articles that are deemed to be compatible. Tables 2-2 and 2-3 show the scheme of classification into compatibility groups, the possible hazard divisions associated with each group, and the consequential classification codes.

1.4.2 The definitions of compatibility groups in Table 2-2 are intended to be mutually exclusive, except for a substance or article which qualifies for Compatibility Group S. Since the criterion of Compatibility Group S is an empirical one, assignment to this group is necessarily linked to the tests for assignment to Division 1.4.

## 1.5 CLASSIFICATION OF EXPLOSIVES

Note. — For additional information regarding classification of explosives, see UN Recommendations, 2.1.3.1.4, 2.1.3.1.5 and 2.1.3.4.

Table 2-2. Classification codes

<i>Description of substance or article to be classified</i>	<i>Compatibility group</i>	<i>Classification code</i>
Primary explosive substance	A	1.1A
Article containing a primary explosive substance and not containing two or more effective protective features. Some articles, such as detonators for blasting, detonator assemblies for blasting and primers, and cap-type, are included even though they do not contain primary explosives	B	1.1B 1.2B 1.4B
Propellant explosive substance or other deflagrating explosive substance or article containing such explosive substance	C	1.1C 1.2C 1.3C 1.4C
Secondary detonating explosive substance or black powder or article containing a secondary detonating explosive substance, in each case without means of initiation and without a propelling charge, or article containing a primary explosive substance and containing two or more effective protective features	D	1.1D 1.2D 1.4D 1.5D
Article containing a secondary detonating explosive substance, without means of initiation, with a propelling charge (other than one containing a flammable liquid or gel or hypergolic liquids)	E	1.1E 1.2E 1.4E
Article containing a secondary detonating explosive substance with its own means of initiation, with a propelling charge (other than one containing a flammable liquid or gel or hypergolic liquids) or without a propelling charge	F	1.1F 1.2F 1.3F 1.4F
Pyrotechnic substance, or article containing a pyrotechnic substance, or article containing both an explosive substance and an illuminating, incendiary, tear- or smoke-producing substance (other than a water-activated article or one containing white phosphorus, phosphides, a pyrophoric substance, a flammable liquid or gel, or hypergolic liquids)	G	1.1G 1.2G 1.3G 1.4G
Article containing both an explosive substance and white phosphorus	H	1.2H 1.3H
Article containing both an explosive substance and a flammable liquid or gel	J	1.1J 1.2J 1.3J
Article containing both an explosive substance and a toxic chemical agent	K	1.2K 1.3K
Explosive substance or article containing an explosive substance and presenting a special risk (e.g. due to water activation or presence of hypergolic liquids, phosphides or a pyrophoric substance) and needing isolation of each type	L	1.1L 1.2L 1.3L
Articles containing only extremely insensitive detonating substances	N	1.6N
Substances or articles so packed or designed that any hazardous effects arising from accidental functioning are confined within the package unless the package has been degraded by fire, in which case all blast or projection effects are limited to the extent that they do not significantly hinder or prohibit fire fighting or other emergency response in the immediate vicinity of the package	S	1.4S

**Table 2-3. Scheme of classification of explosives, combination of hazard division with compatibility group**

Hazard	Compatibility Group													
	A	B	C	D	E	F	G	H	J	K	L	N	S	A-S Σ
1.1	1.1A	1.1B	1.1C	1.1D	1.1E	1.1F	1.1G		1.1J		1.1L			9
1.2		1.2B	1.2C	1.2D	1.2E	1.2F	1.2G	1.2H	1.2J	1.2K	1.2L			10
1.3			1.3C			1.3F	1.3G	1.3H	1.3J	1.3K	1.3L			7
1.4		1.4B	1.4C	1.4D	1.4E	1.4F	1.4G						1.4S	7
1.5				1.5D										
1.6												1.6N		1
1.1-1.6 Σ		3	4	4	3	4	4	2	3	2	3	1	1	35

1.5.1.1 Any substance or article having or suspected of having explosive characteristics must be considered for classification in Class 1 in accordance with the tests, procedures and criteria prescribed in Part I of the *UN Manual of Tests and Criteria*. Substances and articles classified in Class 1 must be assigned to the appropriate division and compatibility group in accordance with the procedures and criteria prescribed in that document.

1.5.1.2 The classification of fireworks must be based on paragraph 2.1.3.5 of the UN Recommendations.

1.5.1.3 Except for substances that are listed by their proper shipping name in the Dangerous Goods List (Table 3-1), goods must not be offered for transport as Class 1 until they have been subjected to the classification procedure prescribed in this Chapter. In addition, the classification procedure must be undertaken before a new product is offered for transport. In this context, a new product is one which, in the opinion of the appropriate national authority, involves any of the following:

- a new explosive substance or a combination or a mixture of explosive substances which is considered to be significantly different from other combinations or mixtures already classified;
- a new design of article or an article containing a new explosive substance or a new combination or mixture of explosive substances;
- a new design of package for an explosive substance or article including a new type of inner packaging.

*Note.— The importance of this can be overlooked unless it is realized that a relatively minor change in an inner or outer packaging can be critical and can convert a lesser risk into a mass explosion risk.*

1.5.1.4 The producer or other applicant for classification of the product must provide adequate information concerning the names and characteristics of all explosive substances in the product and must furnish the results of all relevant tests which have been done. It is assumed that all the explosive substances in a new article have been properly tested and then approved.

## 1.5.2 Exclusion from Class 1

1.5.2.1 The appropriate national authority may exclude an article or substance from Class 1 by virtue of test results and the Class 1 definition.

1.5.2.2 Where a substance provisionally accepted into Class 1 is excluded from Class 1 by performing Test Series 6 on a specific type and size of package, this substance, when meeting the classification criteria or definition for another class or division, should be listed in the Dangerous Goods List in that class or division with a special provision restricting it to the type and size of package tested.

1.5.2.3 Where a substance is assigned to Class 1 but is diluted to be excluded from Class 1 by Test Series 6, this diluted substance (hereafter referred to as desensitized explosive) should be listed in the Dangerous Goods List with an indication of the highest concentration which excluded it from Class 1 (see 2;3.1.4 and 2;4.2.4) and if applicable, the concentration below which it is no longer deemed subject to these Instructions. New solid desensitized explosives subject to these Instructions should be listed in Division 4.1, and new liquid desensitized explosives should be listed in Class 3. When the desensitized explosive meets the criteria or definition for another class or division, the corresponding subsidiary risk(s) should be assigned to it.

## Chapter 2

### CLASS 2 — GASES

*Parts of this Chapter are affected by State Variation US 6;  
see Table A-1*

#### 2.1 DEFINITIONS AND GENERAL PROVISIONS

2.1.1 A gas is a substance which:

- a) at 50°C has a vapour pressure greater than 300 kPa; or
- b) is completely gaseous at 20°C at a standard pressure of 101.3 kPa.

2.1.2 The transport condition of a gas is described according to its physical state as:

- a) compressed gas — a gas which when packaged under pressure for transport is entirely gaseous at –50°C; this category includes all gases with a critical temperature less than or equal to –50°C;
- b) liquefied gas — a gas which when packaged under pressure for transport is partially liquid at temperatures above –50°C. A distinction is made between:

*High pressure liquefied gas:* a gas with a critical temperature between –50°C and +65°C, and

*Low pressure liquefied gas:* a gas with a critical temperature above +65°C;

- c) refrigerated liquefied gas — a gas which when packaged for transport is made partially liquid because of its low temperature; or
- d) dissolved gas — a gas which when packaged under pressure for transport is dissolved in a liquid phase solvent.

2.1.3 This class comprises compressed gases; liquefied gases; dissolved gases; refrigerated liquefied gases; mixtures of one or more gases with one or more vapours of substances of other classes; articles charged with a gas; and aerosols. (For aerosols, see 1;3.1).

≠ *Note 1.— Carbonated beverages and inflated balls used for sports are not subject to these Instructions.*

*Note 2.—“Cryogenic liquid” means the same as “refrigerated liquefied gas”.*

#### 2.2 DIVISIONS

2.2.1 Substances of Class 2 are assigned to one of three divisions based on the primary hazard of the gas during transport.

*Note.— UN 1950 — Aerosols, UN 2037 — Receptacles, small, containing gas and UN 2037 — Gas cartridges must be regarded as being in Division 2.1 when the criteria in 2.5.1 a) are met.*

- a) Division 2.1 — Flammable gases.

Gases which at 20°C and a standard pressure of 101.3 kPa:

- i) are ignitable when in a mixture of 13 per cent or less by volume with air; or
- ii) have a flammable range with air of at least 12 percentage points regardless of the lower flammable limit. Flammability must be determined by tests or by calculation in accordance with methods adopted by ISO (see ISO Standard 10156/1996). Where insufficient data are available to use these methods, tests by a comparable method recognized by the appropriate national authority must be used.

*Note.— UN 1950 — Aerosols and UN 2037 — Receptacles, small, containing gas must be regarded as being in Division 2.1 when the criteria in 2.5.2 are met.*

- b) Division 2.2 — Non-flammable, non-toxic gases.

Gases which:

- i) are asphyxiant — gases which dilute or replace the oxygen normally in the atmosphere; or
  - ii) are oxidizing — gases which may, generally by providing oxygen, cause or contribute to the combustion of other material more than air does. The oxidizing ability must be determined by tests or by calculation in accordance with methods adopted by ISO (see ISO 10156:1996 and ISO 10156-2:2005); or
  - iii) do not come under the other divisions.
- c) Division 2.3 — Toxic gases.

Gases which:

- i) are known to be so toxic or corrosive to humans as to pose a hazard to health; or
- ii) are presumed to be toxic or corrosive to humans because they have an LC<sub>50</sub> value equal to or less than 5 000 mL/m<sup>3</sup> (ppm) when tested in accordance with 6.2.1.3.

*Note.— Gases meeting the above criteria owing to their corrosivity are to be classified as toxic with a subsidiary corrosive risk.*

- 2.2.2 Gases of Division 2.2 are not subject to these Instructions if they are transported at a pressure less than 200 kPa at 20°C and are not liquefied or refrigerated liquefied gases.

### 2.3 HAZARD PRECEDENCE

Gases and gas mixtures with hazards associated with more than one division take the following precedence:

- a) Division 2.3 takes precedence over all other divisions;
- b) Division 2.1 takes precedence over Division 2.2.

### 2.4 MIXTURES OF GASES

For the classification of gas mixtures into one of the three divisions (including vapours of substance from other classes), the following principles must be used:

- a) Flammability must be determined by tests or by calculation in accordance with methods adopted by ISO (see ISO Standard 10156/1996). Where insufficient data are available to use these methods, tests by a comparable method recognized by the appropriate national authority may be used.
- b) The level of toxicity is determined by either tests in accordance with 6.2.1.3 or a calculation method using the following formula:

$$LC_{50} \text{ Toxic (mixture)} = \frac{1}{\sum_{i=1}^n \frac{f_i}{T_i}}$$

where  $f_i$  = mole fraction of the  $i^{\text{th}}$  component substance of the mixture, and

where  $T_i$  = toxicity index of the  $i^{\text{th}}$  component substance of the mixture (the  $T_i$  equals the LC<sub>50</sub> value when available).

When LC<sub>50</sub> values are unknown, the toxicity index is determined by using the lowest LC<sub>50</sub> value of substances of similar physiological and chemical effects, or through testing if this is the only practical possibility.

- c) A gas mixture has a subsidiary risk of corrosivity when the mixture is known by human experience to be destructive to the skin, eyes or mucous membranes or when the LC<sub>50</sub> value of the mixture's corrosive components is equal to or less than 5 000 mL/m<sup>3</sup> (ppm) when the LC<sub>50</sub> value is calculated by the formula:

$$LC_{50} \text{ Corrosive (mixture)} = \frac{1}{\sum_{i=1}^n \frac{f_{ci}}{T_{ci}}}$$

where  $f_{ci}$  = mole fraction of the  $i^{\text{th}}$  corrosive component substance of the mixture, and

where  $T_{ci}$  = Toxicity index of the  $i^{\text{th}}$  corrosive component substance of the mixture (the  $T_{ci}$  equals the  $LC_{50}$  value when available).

- ≠ d) Oxidizing ability is determined either by tests or by calculation methods adopted by the International Standards Organization (see ISO 10156:1996 and ISO 10156-2:2005).

## 2.5 AEROSOLS

2.5.1 For aerosols, the division of Class 2 and the subsidiary risks depend on the nature of the contents of the aerosol dispenser. The following provisions must apply:

- a) Division 2.1 applies if the contents include 85 per cent by mass or more flammable components and the chemical heat of combustion is 30 kJ/g or more;
- b) Division 2.2 applies if the content contains 1 per cent by mass or less flammable components and the heat of combustion is less than 20 kJ/g;
- c) otherwise the product must be classified as tested by the tests described in the UN *Manual of Tests and Criteria*, Part III, section 31. Extremely flammable and flammable aerosols must be classified in Division 2.1; non-flammable in Division 2.2;
- d) gases of Division 2.3 must not be used as a propellant in an aerosol dispenser;
- e) where the contents other than the propellant of aerosol dispensers to be ejected are classified as Division 6.1, Packing Groups II or III or Class 8, Packing Groups II or III, the aerosol must have a subsidiary risk of Division 6.1 or Class 8;
- f) aerosols with contents meeting the criteria of Packing Group I for toxicity or corrosivity are prohibited from transport.

2.5.2 Flammable components are flammable liquids, flammable solids or flammable gases and gas mixtures as defined in Notes 1 to 3 of subsections 31.1.3 of Part III of the UN *Manual of Tests and Criteria*. This designation does not cover pyrophoric, self-heating or water-reactive substances. The chemical heat of combustion must be determined by one of the following methods: ASTM D 240, ISO/FDIS 13943: 1999 (E/F) 86.1 to 86.3 or NFPA 30B.

---

## Chapter 3

### CLASS 3 — FLAMMABLE LIQUIDS

#### INTRODUCTORY NOTES

*Note 1.— The word “flammable” has the same meaning as “inflammable”.*

*Note 2.— The flash point of a flammable liquid may be altered by the presence of an impurity. The substances listed in Class 3 in the Dangerous Goods List in Part 3 must generally be regarded as chemically pure. Since commercial products may contain added substances or impurities, flash points may vary, and this may have an effect on classification or determination of the packing group for the product. In the event of doubt regarding the classification or packing group of a substance, the flash point of the substance must be determined experimentally.*

#### 3.1 DEFINITION AND GENERAL PROVISIONS

3.1.1 Class 3 includes the following substances:

- a) Flammable liquids (see 3.1.2 and 3.1.3);
- b) Liquid desensitized explosives (see 3.1.4).

3.1.2 Flammable liquids are liquids, or mixtures of liquids, or liquids containing solids in solution or suspension (for example paints, varnishes, lacquers, etc., but not including substances otherwise classified on account of their dangerous characteristics) which give off a flammable vapour at temperatures of not more than 60°C, closed-cup test, or not more than 65.6°C, open-cup test, normally referred to as the flash point. This class also includes:

- a) liquids offered for transport at temperatures at or above their flash point; and
- b) substances that are transported or offered for transport at elevated temperatures in a liquid state and which give off a flammable vapour at a temperature at or below the maximum transport temperature (i.e. the maximum temperature likely to be encountered by the substance in transport).

*Note. — Since the results of open-cup tests and of closed-cup tests are not strictly comparable and even individual results by the same test are often variable, regulations varying from the above figures to make allowance for such differences would be within the spirit of this definition.*

3.1.3 Liquids meeting the definition in 3.1.2 above with a flash point of more than 35°C which do not sustain combustion need not be considered as flammable liquids for the purposes of these Instructions. Liquids are considered to be unable to sustain combustion for the purposes of these Instructions (i.e. they do not sustain combustion under defined test conditions) if:

- a) they have passed a suitable combustibility test (see Sustained Combustibility Test prescribed in the UN *Manual of Tests and Criteria*, Part III, subsection 32.5.2); or
- ≠ b) their fire point according to ISO 2592:2000 is greater than 100°C; or
- c) they are miscible solutions with a water content of more than 90 per cent by mass.

3.1.4 Liquid desensitized explosives are explosive substances which are dissolved or suspended in water or other liquid substances, to form homogeneous liquid mixture to suppress their explosive properties (see 1.5.2.3). Entries in the Dangerous Goods List (Table 3-1) for liquid desensitized explosives are: UN 1204, UN 2059, UN 3064, UN 3343, UN 3357 and UN 3379.

#### 3.2 ASSIGNMENT OF PACKING GROUPS

3.2.1 Table 2-4 should be used for the determination of the packing group of a liquid that presents a risk due to flammability. For liquids whose only hazard is flammability, the packing group for the material is the packing group shown in Table 2-4. For a liquid possessing an additional hazard(s), the packing group, determined by using Table 2-4, and the packing group based on the severity of the additional hazard(s), must be considered. In such cases, the table of precedence of hazard characteristics appearing in Table 2-1 should be used to determine the correct classification of the liquid.

3.2.2 Viscous substances such as paints, enamels, lacquers, varnishes, adhesives and polishes having a flash point below 23°C may be placed in Packing Group III in conformity with the procedures prescribed in Part III, subsection 3.2.3, *UN Manual of Tests and Criteria*, on the basis of:

- a) the viscosity expressed as the flow time in seconds;
- b) the closed-cup flash point;
- c) a solvent separation test; and
- d) the size of the receptacle.

### 3.2.3 *Criteria for inclusion in Packing Group III*

Viscous flammable liquids such as paints, enamels, varnishes, adhesives and polishes with a flash point of less than 23°C are included in Packing Group III provided that:

- a) less than 3 per cent of the clear solvent layer separates in the solvent separation test;
- b) the mixture or any separated solvent does not meet the criteria for Division 6.1 or Class 8;
- c) the viscosity and flash point are in accordance with Table 2-5;
- d) the capacity of the receptacle used does not exceed 30 L.

3.2.4 Substances classified as flammable liquids due to their being transported or offered for transport at elevated temperatures are included in Packing Group III.

## 3.3 DETERMINATION OF FLASH POINT

The following is a list of documents describing methods for determining the flash point of substances in Class 3:

*France* (Association française de normalisation, AFNOR, Tour Europe, 92049 Paris La Défense)

- French Standard NF M 07-019
- French Standards NF M 07-011 / NF T 30-050 / NF T 66-009
- French Standard NF M 07-036

*Germany* (Deutsches Institut für Normung, Burggrafenstrasse 6, D-10787 Berlin)

- Standard DIN 51755 (flash points below 65°C)
- Standard DIN EN 22719 (flash points above 5°C)
- Standard DIN 53213 (for varnishes, lacquers and similar viscous liquids with flash points below 65°C)

*Netherlands*

- ASTM D93-90
- ASTM D3278-89
- ISO 1516
- ISO 1523
- ISO 3679
- ISO 3680

*Russian Federation* (State Committee of the Council of Ministers for Standardization, 113813, GSP, Moscow, M-49 Leninsky Prospect, 9)

- GOST 12.1.044-84

≠ *United Kingdom* (British Standards Institution, Customer Services, 389 Chiswick High Road, London, N7 8LB)

- British Standard BS EN 22719
- British Standard BS 2000 Part 170

*United States* (American Society for Testing Materials, 1916 Race Street, Philadelphia, PA 19103)

- ASTM D 3828-93, Standard Test Methods for Flash Point by Small Scale Closed Tester
- ASTM D 56-93, Standard Test Method for Flash Point by Tag Closed Tester
- TM 3278-96, Standard Test Methods for Flash Point of Liquids by Setaflash Closed-Cup Apparatus
- ASTM D 0093-96, Standard Test Methods for Flash Point by Pensky-Martens Closed Cup Tester.

**Table 2-4. Packing group based on flammability**

<i>Packing group</i>	<i>Flash point (closed-cup)</i>	<i>Initial boiling point</i>
I	—	≤35°C
II	<23°C	>35°C
III	≥23°C, ≤60°C	>35°C

**Table 2-5. Viscosity and flashpoints**

<i>Flow time t in seconds</i>	<i>Jet diameter in mm</i>	<i>Flash point in °C (closed-cup)</i>
20 < t ≤ 60	4	above 17
60 < t ≤ 100	4	above 10
20 < t ≤ 32	6	above 5
32 < t ≤ 44	6	above -1
44 < t ≤ 100	6	above -5
100 < t	6	-5 and below

## Chapter 4

# CLASS 4 — FLAMMABLE SOLIDS; SUBSTANCES LIABLE TO SPONTANEOUS COMBUSTION; SUBSTANCES WHICH, IN CONTACT WITH WATER, EMIT FLAMMABLE GASES

### INTRODUCTORY NOTES

*Note 1.— Where the term “water-reactive” is used in these Instructions, it refers to a substance which, in contact with water, emits flammable gas.*

*Note 2.— Because of the different properties exhibited by the dangerous goods within Divisions 4.1 and 4.2, it is impracticable to establish a single criterion for classification in either of these divisions. Tests and criteria for assignment to the three divisions of Class 4 are addressed in this chapter and in the UN Manual of Tests and Criteria, Part III, section 33.*

*Note 3.— Since organometallic substances can be classified in Divisions 4.2 or 4.3 with additional subsidiary risks, depending on their properties, a specific classification flowchart for these substances is given in 2.4.5 of the UN Recommendations on the Transport of Dangerous Goods.*

### 4.1 DEFINITIONS AND GENERAL PROVISIONS

4.1.1 Class 4 is divided into three divisions as follows:

a) Division 4.1 — Flammable solids.

Solids which, under conditions encountered in transport, are readily combustible or may cause or contribute to fire through friction; self-reactive substances which are liable to undergo a strongly exothermic reaction; desensitized explosives which may explode if not diluted sufficiently.

b) Division 4.2 — Substances liable to spontaneous combustion.

Substances which are liable to spontaneous heating under normal conditions encountered in transport, or to heating up in contact with air, and being then liable to catch fire.

c) Division 4.3 — Substances which, in contact with water, emit flammable gases.

Substances which, by interaction with water, are liable to become spontaneously flammable or to give off flammable gases in dangerous quantities.

4.1.2 As referenced in this Chapter, test methods and criteria, with advice on application of the tests, are given in the current edition of the UN *Manual of Tests and Criteria*, for the classification of the following types of substances of Class 4:

a) Flammable solids (Division 4.1);

b) Self-reactive substances (Division 4.1);

c) Pyrophoric solids (Division 4.2);

d) Pyrophoric liquids (Division 4.2);

e) Self-heating substances (Division 4.2); and

f) Substances which, in contact with water, emit flammable gases (Division 4.3).

Test methods and criteria for self-reactive substances are given in Part II of the UN *Manual of Tests and Criteria*, and test methods and criteria for the other types of substances of Class 4 are given in Part III, section 33 of the UN *Manual of Tests and Criteria*.

## 4.2 FLAMMABLE SOLIDS, SELF-REACTIVE SUBSTANCES AND DESENSITIZED EXPLOSIVES

### 4.2.1 General

Division 4.1 includes the following types of substances:

- a) flammable solids (see 4.2.2);
- b) self-reactive substances (see 4.2.3); and
- c) solid desensitized explosives (see 4.2.4).

### 4.2.2 Division 4.1 — Flammable solids

#### 4.2.2.1 Definitions and properties

4.2.2.1.1 Flammable solids are readily combustible solids and solids which may cause fire through friction.

4.2.2.1.2 Readily combustible solids are powdered, granular or pasty substances which are dangerous if they can be easily ignited by brief contact with an ignition source, such as a burning match, and if the flame spreads rapidly. The danger may not only come from the fire but also from toxic combustion products. Metal powders are especially dangerous because of the difficulty of extinguishing a fire since normal extinguishing agents such as carbon dioxide or water can increase the hazard.

#### 4.2.2.2 Classification of flammable solids

4.2.2.2.1 Powdered, granular or pasty substances must be classified as readily combustible solids of Division 4.1 when the time of burning of one or more of the test runs, performed in accordance with the test methods and criteria in the *UN Manual of Tests and Criteria*, Part III, subsection 33.2.1, is less than 45 seconds or the rate of burning is more than 2.2 mm/s. Powders of metals or metal alloys must be classified in Division 4.1 when they can be ignited and the reaction spreads over the whole length of the sample in 10 minutes or less.

4.2.2.2.2 Solids which may cause fire through friction must be classified in Division 4.1 by analogy with existing entries (e.g. matches) until definitive criteria are established.

#### 4.2.2.3 Assignment of packing groups

4.2.2.3.1 Packing groups are assigned on the basis of the test methods referred to in 4.2.2.2.1. For readily combustible solids (other than metal powders), Packing Group II must be assigned if the burning time is less than 45 seconds and the flame passes the wetted zone. Packing Group III must be assigned to powders of metal or metal alloys if the zone of reaction spreads over the whole length of the sample in 5 minutes or less.

4.2.2.3.2 Packing groups are assigned on the basis of the test methods referred to in 4.2.2.2.1. For readily combustible solids (other than metal powders), Packing Group III must be assigned if the burning time is less than 45 seconds and the wetted zone stops the flame propagation for at least 4 minutes. Packing Group III must be assigned to metal powders if the reaction spreads over the whole length of the sample in more than 5 minutes but not more than 10 minutes.

4.2.2.3.3 Solids which may cause fire through friction must be assigned to a packing group by analogy with existing entries or in accordance with any appropriate special provision (see Table 3-2).

### 4.2.3 Division 4.1 — Self-reactive substances

#### 4.2.3.1 Definitions and properties

##### 4.2.3.1.1 Definitions

For the purposes of these Instructions:

Self-reactive substances are thermally unstable substances liable to undergo a strongly exothermic decomposition even without the participation of oxygen (air). The following substances must not be considered to be self-reactive substances of Division 4.1 if:

- a) they are explosives according to the criteria of Class 1;

- b) they are oxidizing substances according to the classification procedure for Division 5.1 (see 5.2.1.1) except that mixtures of oxidizing substances which contain 5.0 per cent or more of combustible organic substances must be subjected to the classification procedure defined in Note 3;
- c) they are organic peroxides according to the criteria of Division 5.2;
- d) their heat of decomposition is less than 300 J/g; or
- e) their self-accelerating decomposition temperature is greater than 75°C for a 50 kg package.

*Note 1.— The heat of decomposition can be determined by using any internationally recognized method, e.g. differential scanning calorimetry and adiabatic calorimetry.*

*Note 2. — Any substance which shows the properties of a self-reactive substance must be classified as such, even if this substance gives a positive test result, according to 4.3.2 for inclusion in Division 4.2.*

*Note 3.— Mixtures of oxidizing substances meeting the criteria of Division 5.1 which contain 50 per cent or more of combustible organic substances, which do not meet the criteria mentioned in a), c), d) or e) above, must be subjected to the self-reactive substance classification procedure.*

*A mixture showing the properties of a self-reactive substance, type B to F, must be classified as a self-reactive substance of Division 4.1.*

*A mixture showing the properties of a self-reactive substance, type G, according to the principle of 2.4.2.3.3.2 (g) of the UN Recommendations must be considered for classification as a substance of Division 5.1 (see 5.2.1.1).*

#### 4.2.3.1.2 Properties

The decomposition of self-reactive substances can be initiated by heat, contact with catalytic impurities (e.g. acids, heavy-metal compounds, bases), friction or impact. The rate of decomposition increases with temperature and varies with the substance. Decomposition, particularly if no ignition occurs, may result in the evolution of toxic gases or vapours. For certain self-reactive substances, the temperature must be controlled. Some self-reactive substances may decompose explosively, particularly if confined; this characteristic may be modified by the addition of diluents or by the use of appropriate packagings. Some self-reactive substances burn vigorously. Self-reactive substances include some of the following types of compounds:

- a) aliphatic azo compounds ( $\text{—C—N=N—C—}$ );
- b) organic azides ( $\text{—C—N}_3$ );
- c) diazonium salts ( $\text{—CN}_2^+\text{Z}$ );
- d) N-nitroso compounds ( $\text{—N—N=O}$ ); and
- e) aromatic sulphohydrazides ( $\text{—SO}_2\text{—NH—NH}_2$ ).

This list is not exhaustive and substances with other reactive groups and some mixtures of substances may have similar properties.

#### 4.2.3.2 Classification of self-reactive substances

4.2.3.2.1 Self-reactive substances are classified according to the degree of danger they present.

4.2.3.2.2 Related substances are specifically listed by name in the Dangerous Goods List (Table 3-1). Related substances are UN 2956, UN 3242 and UN 3251.

4.2.3.2.3 Self-reactive substances permitted for transport are listed in 4.2.3.2.4. For each permitted substance listed, the appropriate generic entry of the Dangerous Goods List (UN 3221 to 3240) is assigned, and appropriate subsidiary risks and remarks providing relevant information are given. The generic entries specify:

- the self-reactive substance type (B to F);
- the physical state (i.e. liquid/solid); and
- when temperature control is required.

#### 4.2.3.2.4 List of currently assigned self-reactive substances in packages

The following table (Table 2-6) is reproduced from 2.4.2.3.2.3 of the UN *Recommendations on the Transport of Dangerous Goods* (Fifteenth revised edition), with irrelevant material removed.

**Table 2-6. List of currently assigned self-reactive substances in packages**

Note.— Self-reactive substances to be transported must fulfil the classification and the control and emergency temperatures (derived from the self-accelerating decomposition temperature (SADT)) as listed.

Self-reactive substance	Concentration (%)	Control temperature (°C)	Emergency temperature (°C)	UN generic entry	Notes
Acetone-pyrogallol copolymer 2-diazo-1-naphthol-5-sulphonate	100			3228	
Azodicarbonamide formulation type B, temperature controlled	<100			FORBIDDEN	1, 2
Azodicarbonamide formulation type C	<100			3224	3
Azodicarbonamide formulation type C, temperature controlled	<100			3234	3
Azodicarbonamide formulation type D	<100			3226	4
Azodicarbonamide formulation type D, temperature controlled	<100			3236	4
2,2'-Azodi (2,4-dimethyl-4-methoxyvaleronitrile)	100	-5	+5	3236	
2,2'-Azodi (2,4-dimethyl-valeronitrile)	100	+10	+15	3236	
2,2'-Azodi (ethyl-2-methylpropionate)	100	+20	+25	3235	
1,1'-Azodi (hexahydrobenzotriazole)	100			3226	
2,2'-Azodi (isobutyronitrile)	100	+40	+45	3234	
2,2'-Azodi (isobutyronitrile) as a water-based paste	≤50			3224	
2,2'-Azodi (2-methylbutyronitrile)	100	+35	+40	3236	
Benzene-1,3-disulphonyl hydrazide, as a paste	52			3226	
Benzenesulphonyl hydrazide	100			3226	
4-(Benzyl(ethyl)amino)-3-ethoxybenzenediazonium zinc chloride	100			3226	
4-(Benzyl(methyl)amino)-3-ethoxybenzenediazonium zinc chloride	100	+40	+45	3236	
3-Chloro-4-diethylaminobenzenediazonium zinc chloride	100			3226	
2-Diazo-1-naphthol-4-sulphonyl chloride	100			FORBIDDEN	2
2-Diazo-1-naphthol-5-sulphonyl chloride	100			FORBIDDEN	2
2-Diazo-1-naphthol sulphonic acid ester mixture, type D	<100			3226	7
2,5-Dibutoxy-4-(4-morpholinyl)-benzenediazonium, tetrachlorozincate (2:1)	100			3228	
2,5-Diethoxy-4-morpholinobenzenediazonium tetrafluoroborate	100	+30	+35	3236	
2,5-Diethoxy-4-morpholinobenzenediazonium zinc chloride	67-100	+35	+40	3236	
2,5-Diethoxy-4-morpholinobenzenediazonium zinc chloride	66	+40	+45	3236	
2,5-Diethoxy-4-(4-morpholinyl)-benzenediazonium sulphate	100			3226	
2,5-Diethoxy-4-(phenylsulphonyl) benzenediazonium zinc chloride	67	+40	+45	3236	
Diethyleneglycol bis (allyl carbonate) + Di-isopropyl-peroxydicarbonate	≥88 + ≤12	10	0	3237	
2,5-Dimethoxy-4-(4-methylphenylsulphonyl) benzenediazonium zinc chloride	79	+40	+45	3236	
4-(Dimethylamino)-benzenediazonium trichlorozincate (-1)	100			3228	
4-Dimethylamino-6-(2-dimethylaminoethoxy) toluene-2-diazonium zinc chloride	100	+40	+45	3236	
N,N'-Dinitroso-N,N'-dimethyl terephthalamide, as a paste	72			3224	
N,N'-Dinitrosopentamethylenetetramine	82			3224	5
Diphenyloxide-4,4'-disulphonyl hydrazide	100			3226	
4-Dipropylaminobenzenediazonium zinc chloride	100			3226	

Self-reactive substance	Concentration (%)	Control temperature (°C)	Emergency temperature (°C)	UN generic entry	Notes
2-(n,n-Ethoxycarbonylphenylamino)-3-methoxy-4-(n-methyl-n-cyclohexylamino) benzenediazonium zinc chloride	63-92	+40	+45	3236	
2-(n,n-Ethoxycarbonylphenylamino)-3-methoxy-4-(n-methyl-n-cyclohexylamino) benzenediazonium zinc chloride	62	+35	+40	3236	
N-Formyl-2-(nitromethylene)-1,3-perhydrothiazine	100	+45	+50	3236	
2-(2-Hydroxyethoxy)-1-(pyrrolidin-1-yl) benzene-4-diazonium zinc chloride	100	+45	+50	3236	
3-(2-Hydroxyethoxy)-4-(pyrrolidin-1-yl) benzenediazonium zinc chloride	100	+40	+45	3236	
2-(n,n-Methylaminoethylcarbonyl)-4-(3,4-dimethylphenylsulphonyl) benzenediazonium hydrogen sulphate	96	+45	+50	3236	
4-Methylbenzenesulphonylhydrazide	100			3226	
3-Methyl-4-(pyrrolidin-1-yl) benzenediazonium tetrafluoroborate	95	+45	+50	3234	
4-Nitrosophenol	100	+35	+40	3236	
Self-reactive liquid, sample				3223	6
Self-reactive liquid, sample temperature controlled				3233	6
Self-reactive solid, sample				3224	6
Self-reactive solid, sample temperature controlled				3234	6
Sodium 2-diazo-1-naphthol-4-sulphonate	100			3226	
Sodium 2-diazo-1-naphthol-5-sulphonate	100			3226	
Tetramine palladium (II) nitrate	100	+30	+35	3234	

## NOTES:

1. Azodicarbonamide formulations which fulfil the criteria of 2.4.2.3.3.2 (b) of the UN Recommendations.
2. "EXPLOSIVE" subsidiary risk label required and consequently forbidden for transport by air under any circumstance.
3. Azodicarbonamide formulations which fulfil the criteria of 2.4.2.3.3.2 (c) of the UN Recommendations.
4. Azodicarbonamide formulations which fulfil the criteria of 2.4.2.3.3.2 (d) of the UN Recommendations.
5. With a compatible diluent having a boiling point of not less than 150°C.
6. See 4.2.3.2.6.
7. This entry applies to mixtures of esters of 2-diazo-1-naphthol-4-sulphonic acid and 2-diazo-1-naphthol-5-sulphonic acid meeting the criteria of 2.4.2.3.3.2 d) of the UN Recommendations.

4.2.3.2.5 Classification of self-reactive substances not listed in Table 2-6 and assignment to a generic entry must be made by the appropriate authority of the State of Origin on the basis of a test report. Principles applying to the classification of such substances are provided in 2.4.2.3.3 of the UN Recommendations. The applicable classification procedures, test methods and criteria, and an example of a suitable test report, are given in the current edition of the UN *Manual of Tests and Criteria*, Part II. The statement of approval must contain the classification and the relevant transport conditions.

4.2.3.2.6 Samples of self-reactive substances not listed in Table 2-6, for which a complete set of test results is not available and which are to be transported for further testing or evaluation, may be assigned to one of the appropriate entries for self-reactive substances type C provided the following conditions are met:

- a) the available data indicate that the sample would be no more dangerous than self-reactive substances type B;
- b) the sample is packed in a combination packaging consisting of a plastic IP.2 inner packaging with a capacity not exceeding 0.5 L or 0.5 kg which is placed in a wooden box (4C1), plywood box (4D) or fibreboard box (4G) with the maximum net quantity per package not exceeding 1 L or 1 kg; and
- c) the available data indicate that the control temperature, if any, is sufficiently low to prevent any dangerous decomposition and sufficiently high to prevent any dangerous phase separation.

#### 4.2.3.3 Temperature control requirements

With the exception of self-reactive solids of type B, which are forbidden for transport by air under any circumstance, self-reactive substances which require temperature control during transport are forbidden for transport by air unless exempted (see 1;1.1.2). Self-reactive substances must be subject to temperature control if their self-accelerating decomposition temperature (SADT) is less than or equal to 55°C. Test methods for determining the SADT are given in the current edition of the UN *Manual of Tests and Criteria*. The test selected must be conducted in a manner which is representative of the package to be transported both in size and material of construction.

#### 4.2.3.4 Desensitization of self-reactive substances

4.2.3.4.1 In order to ensure safety in transport, self-reactive substances may be desensitized by the use of a diluent. When a diluent is used, the self-reactive substance must be tested with the diluent present in the concentration and form to be used in transport.

4.2.3.4.2 Diluents, which may allow a self-reactive substance to concentrate to a dangerous extent in the event of leakage from a package, must not be used.

4.2.3.4.3 The diluent used must be compatible with the self-reactive substance. In this regard, compatible diluents are those solids or liquids which have no detrimental influence on the thermal stability and hazard type of the self-reactive substance.

### 4.2.4 Division 4.1 — Solid desensitized explosives

#### 4.2.4.1 Definition

≠ Solid desensitized explosives are explosive substances which are wetted with water or alcohols or are diluted with other substances to form a homogeneous solid mixture to suppress their explosive properties. Entries in the Dangerous Goods List for solid desensitized explosives are UN 1310, 1320, 1321, 1322, 1336, 1337, 1344, 1347, 1348, 1349, 1354, 1355, 1356, 1357, 1517, 1571, 2555, 2556, 2557, 2852, 2907, 3317, 3319, 3344, 3364, 3365, 3366, 3367, 3368, 3369, 3370, 3376, UN 3380 and UN 3474.

#### 4.2.4.2 Substances that:

- a) have been provisionally accepted into Class 1 according to Test Series 1 and 2 but exempted from Test Series 6;
- b) are not self-reactive substances of Division 4.1;
- c) are not substances of Class 5.

are also assigned to Division 4.1. UN 2956, UN 3241, UN 3242 and UN 3251 are such entries.

## 4.3 SUBSTANCES LIABLE TO SPONTANEOUS COMBUSTION (DIVISION 4.2)

### 4.3.1 Definitions and properties

#### 4.3.1.1 Division 4.2 includes:

- a) pyrophoric substances: substances, including mixtures and solutions (liquid or solid), which even in small quantities ignite within 5 minutes of coming into contact with air. These substances are the most liable to spontaneous combustion and are called pyrophoric substances; and
- b) self-heating substances: other substances which in contact with air without energy supply are liable to self-heating. These substances will ignite only when in large amounts (kilograms) and after long periods of time (hours or days) and are called self-heating substances.

4.3.1.2 Self-heating of substances, leading to spontaneous combustion, is caused by reaction of the substance with oxygen (in the air) and the heat developed not being conducted away sufficiently rapidly to the surroundings. Spontaneous combustion occurs when the rate of heat production exceeds the rate of heat loss and the auto-ignition temperature is reached.

### 4.3.2 Classification in Division 4.2

4.3.2.1 Solids are considered pyrophoric solids which must be classified in Division 4.2 if, in tests performed in accordance with the test method given in the current edition of the UN *Manual of Tests and Criteria*, Part III, subsection 33.3.1, the sample ignites in one of the tests.

4.3.2.2 Liquids are considered pyrophoric liquids which must be classified in Division 4.2 if, in tests performed in accordance with the test method given in the current edition of the UN *Manual of Tests and Criteria*, Part III, subsection 33.3.1.5, the liquid ignites in the first part of the test, or if it ignites or chars the filter paper.

#### 4.3.2.3 Self-heating substances

4.3.2.3.1 A substance must be classified as a self-heating substance of Division 4.2 if, in tests performed in accordance with the test method given in the current edition of the UN *Manual of Tests and Criteria*, Part III, subsection 33.3.1.6:

- a) a positive result is obtained using a 25 mm sample cube at 140°C;
- b) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 100 mm sample cube at 120°C and the substance is to be transported in packages with a volume of more than 3 m<sup>3</sup>;
- c) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 100 mm sample cube at 100°C and the substance is to be transported in packaging with a volume of more than 450 L;
- d) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a positive result is obtained using a 100 mm sample cube at 100°C.

Self-reactive substances, except for type G, which also give a positive result according to this test method must not be classified in Division 4.2 but in Division 4.1 (see 4.2.3.1.1).

4.3.2.3.2 A substance must not be classified in Division 4.2 if:

- a) a negative result is obtained in a test using a 100 mm sample cube at 140°C;
- b) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 25 mm sample cube at 140°C, a negative result is obtained in a test using a 100 mm sample cube at 120°C and the substance is to be transported in packagings with a volume of not more than 3 cubic metres; or
- c) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 25 mm sample cube at 140°C, a negative result is obtained in a test using a 100 mm sample cube at 100°C and the substance is to be transported in packagings with a volume of not more than 450 L.

### 4.3.3 Assignment of packing groups

4.3.3.1 Packing Group I must be assigned to all pyrophoric liquids and solids.

4.3.3.2 Packing Group II must be assigned to self-heating substances which give positive results in a test using a 25 mm sample cube at 140°C.

4.3.3.3 Packing Group III must be assigned to self-heating substances if:

- a) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 25 mm sample cube at 140°C and the substance is to be transported in packagings with a volume of more than 3 cubic metres;
- b) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 25 mm sample cube at 140°C, a positive result is obtained in a test using a 100 mm sample cube at 120°C and the substance is to be transported in packagings with a volume of more than 450 L; or
- c) a positive result is obtained in a test using a 100 mm sample cube at 140°C and a negative result is obtained in a test using a 25 mm sample cube at 140°C and a positive result is obtained in a test using a 100 mm sample cube at 100°C.

## 4.4 SUBSTANCES WHICH, IN CONTACT WITH WATER, EMIT FLAMMABLE GASES (DIVISION 4.3)

### 4.4.1 Definitions and properties

4.4.1.1 Division 4.3 — Substances which, in contact with water, emit flammable gases.

4.4.1.2 Certain substances in contact with water emit flammable gases which can form explosive mixtures with air. Such mixtures are easily ignited by all ordinary sources of ignition, for example, naked lights, sparking handtools or unprotected light bulbs. The resulting blast wave and flames may endanger people and the environment. The test method referred to in 4.4.2

must be used to determine whether the reaction of a substance with water leads to the development of a dangerous amount of gases which may be flammable. It must not be applied to pyrophoric substances.

#### 4.4.2 Classification in Division 4.3

Substances which, in contact with water, emit flammable gases must be classified in Division 4.3 if, in tests performed in accordance with the test method given in the UN *Manual of Tests and Criteria*, Part III, subsection 33.4.1:

- a) spontaneous ignition takes place in any step of the test procedure; or
- b) there is an evolution of a flammable gas at a rate greater than 1 L/kg of the substance per hour.

#### 4.4.3 Assignment of packing groups

4.4.3.1 Packing Group I must be assigned to any substance which reacts vigorously with water at ambient temperatures and demonstrates generally a tendency for the gas produced to ignite spontaneously, or which reacts readily with water at ambient temperatures such that the rate of evolution of flammable gas is equal to or greater than 10 L/kg of substance over any one minute.

4.4.3.2 Packing Group II must be assigned to any substance which reacts readily with water at ambient temperatures such that the maximum rate of evolution of flammable gas is equal to or greater than 20 L/kg of substance per hour, and which does not meet the criteria for Packing Group I.

4.4.3.3 Packing Group III must be assigned to any substance which reacts slowly with water at ambient temperatures such that the maximum rate of evolution of flammable gas is equal to or greater than 1 L/kg of substance per hour, and which does not meet the criteria for Packing Groups I or II.

### 4.5 CLASSIFICATION OF ORGANOMETALLIC SUBSTANCES

Depending on their properties, organometallic substances may be classified in Divisions 4.2 or 4.3, as appropriate, in accordance with the flowchart scheme given in Figure 2.4.2 of the UN *Recommendations on the Transport of Dangerous Goods*.

## Chapter 5

# CLASS 5 — OXIDIZING SUBSTANCES; ORGANIC PEROXIDES

### INTRODUCTORY NOTE

Because of the different properties exhibited by dangerous goods within Divisions 5.1 and 5.2, it is impracticable to establish a single criterion for classification in either division. Tests and criteria for assignment to the two divisions of Class 5 are addressed in this Chapter and in the UN *Manual of Tests and Criteria*.

### 5.1 DEFINITIONS AND GENERAL PROVISIONS

Class 5 is divided into two divisions as follows:

a) Division 5.1 — Oxidizing substances

Substances which, in themselves are not necessarily combustible, may generally, by yielding oxygen, cause or contribute to the combustion of other material. Such substances may be contained in an article.

b) Division 5.2 — Organic peroxides

Organic substances which contain the bivalent —O—O— structure and may be considered derivatives of hydrogen peroxide, where one or both of the hydrogen atoms have been replaced by organic radicals. Organic peroxides are thermally unstable substances, which may undergo exothermic, self-accelerating decomposition. In addition, they may have one or more of the following properties:

- i) be liable to explosive decomposition;
- ii) burn rapidly;
- iii) be sensitive to impact or friction;
- iv) react dangerously with other substances;
- v) cause damage to the eyes.

### 5.2 OXIDIZING SUBSTANCES (DIVISION 5.1)

#### 5.2.1 Classification in Division 5.1

5.2.1.1 Oxidizing substances are classified in Division 5.1 in accordance with the test methods, procedures and criteria in 5.2.2, 5.2.3 and the UN *Manual of Tests and Criteria*, Part III, section 34. In the event of divergence between test results and known experience, the appropriate authority of the State of Origin must be consulted to establish the appropriate classification and packing group.

*Note.— Where substances of this division are listed in the Dangerous Goods List in 3:2, reclassification of those substances in accordance with these criteria need only be undertaken when this is necessary for safety.*

#### 5.2.2 Oxidizing solids

##### 5.2.2.1 Criteria for classification in Division 5.1

5.2.2.1.1 Tests are performed to measure the potential for a solid substance to increase the burning rate or burning intensity of a combustible substance when the two are thoroughly mixed. The procedure is given in the UN *Manual of Tests and Criteria*, Part III, subsection 34.4.1. Tests are conducted on the substance to be evaluated mixed with dry fibrous cellulose in mixing ratios of 1:1 and 4:1, by mass, of sample to cellulose. The burning characteristics of the mixtures are compared with the standard 3:7

mixture, by mass, of potassium bromate to cellulose. If the burning time is equal to or less than this standard mixture, the burning times should be compared with those from the Packing Group I or II reference standards, 3:2 and 2:3 ratios, by mass, of potassium bromate to cellulose, respectively.

5.2.2.1.2 The classification test results are assessed on the basis of:

- a) the comparison of the mean burning time with those of the reference mixtures; and
- b) whether the mixture of substance and cellulose ignites and burns.

5.2.2.1.3 A solid substance is classified in Division 5.1 if the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time equal to or less than the mean burning time of a 3:7 mixture (by mass) of potassium bromate and cellulose.

5.2.2.1.4 Assignment of packing groups

Solid oxidizing substances are assigned to a packing group according to the test procedure in the UN *Manual of Tests and Criteria*, Part III, section 34.4.1, in accordance with the following criteria:

- a) Packing Group I: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time less than the mean burning time of a 3:2 mixture, by mass, of potassium bromate and cellulose;
- b) Packing Group II: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time equal to or less than the mean burning time of a 2:3 mixture (by mass) of potassium bromate and cellulose and the criteria for Packing Group I are not met;
- c) Packing Group III: any substance which, in the 4:1 or 1:1 sample-to-cellulose ratio (by mass) tested, exhibits a mean burning time equal to or less than the mean burning time of a 3:7 mixture (by mass) of potassium bromate and cellulose and the criteria for Packing Groups I and II are not met;
- d) Not Division 5.1: any substance which, in both the 4:1 and 1:1 sample-to-cellulose ratio (by mass) tested, does not ignite and burn, or exhibits mean burning times greater than that of a 3:7 mixture (by mass) of potassium bromate and cellulose.

### 5.2.3 Oxidizing liquids

5.2.3.1 *Criteria for classification in Division 5.1*

5.2.3.1.1 A test is performed to determine the potential for a liquid substance to increase the burning rate or burning intensity of a combustible substance or for spontaneous ignition to occur when the two are thoroughly mixed. The procedure is given in the UN *Manual of Tests and Criteria*, Part III, subsection 34.4.2. It measures the pressure rise time during combustion. Whether a liquid is an oxidizing substance of Division 5.1 and, if so, whether Packing Group I, II or III must be assigned, is decided on the basis of the test result (see also precedence of hazards characteristics).

5.2.3.1.2 The classification test results are assessed on the basis of:

- a) whether the mixture of substance and cellulose spontaneously ignites;
- b) the comparison of the mean time taken for the pressure to rise from 690 kPa to 2 070 kPa gauge with those of the reference substances.

5.2.3.1.3 A liquid substance is classified in Division 5.1 if the 1:1 mixture, by mass, of substance and cellulose tested, exhibits a mean pressure rise time less than or equal to the mean pressure rise time of a 1:1 mixture, by mass, of 65 per cent aqueous nitric acid and cellulose.

5.2.3.2 *Assignment of packing groups*

Liquid oxidizing substances are assigned to a packing group according to the test procedure in the UN *Manual of Tests and Criteria*, Part III, section 34.4.2, in accordance with the following criteria:

- Packing Group I: any substance which, in the 1:1 mixture, by mass, of substance and cellulose tested, spontaneously ignites; or the mean pressure rise time of a 1:1 mixture, by mass, of substance and cellulose is less than that of a 1:1 mixture, by mass, of 50 per cent perchloric acid and cellulose.
- Packing Group II: any substance which, in the 1:1 mixture, by mass, of substance and cellulose tested, exhibits a mean pressure rise time less than or equal to the mean pressure rise time of a 1:1 mixture, by mass, of 40 per cent aqueous sodium chlorate solution and cellulose; and the criteria for Packing Group I are not met.
- Packing Group III: any substance which, in the 1:1 mixture, by mass, of substance and cellulose tested, exhibits a mean pressure rise time less than or equal to the mean pressure rise time of a 1:1 mixture, by mass, of 65 per cent aqueous nitric acid and cellulose; and the criteria for Packing Groups I and II are not met.

Not Division 5.1: any substance which, in the 1:1 mixture, by mass, of substance and cellulose tested, exhibits a pressure rise of less than 2 070 kPa gauge; or exhibits a mean pressure rise time greater than the mean pressure rise time of a 1:1 mixture, by mass, of 65 per cent aqueous nitric acid and cellulose.

### 5.3 ORGANIC PEROXIDES (DIVISION 5.2)

#### 5.3.1 Properties

5.3.1.1 Organic peroxides are liable to exothermic decomposition which can be started by heat, contact with impurities (e.g. acids, heavy metal compounds, amines), friction or impact. The rate of decomposition increases with temperature and varies with the peroxide formulation. Decomposition may result in the evolution of harmful or flammable gases or vapours. For certain organic peroxides the temperature must be controlled during transport. Some organic peroxides decompose explosively, particularly if confined. This characteristic may be modified by the addition of diluents or by the use of appropriate packagings. Many organic peroxides burn vigorously.

5.3.1.2 Contact of organic peroxides with the eyes should be avoided. Some organic peroxides will cause serious injury to the cornea, even after brief contact, or will be corrosive to the skin.

#### 5.3.2 Classification of organic peroxides

5.3.2.1 Any organic peroxide must be considered for classification in Division 5.2 unless the organic peroxide formulation contains:

- a) not more than 1.0 per cent available oxygen from the organic peroxides when containing not more than 1.0 per cent hydrogen peroxide; or
- b) not more than 0.5 per cent available oxygen from the organic peroxides when containing more than 1.0 per cent but not more than 7.0 per cent hydrogen peroxide.

*Note.— The available oxygen content (per cent) of an organic peroxide formulation is given by the formula*

$$16 \times \sum (n_i \times c_i / m_i)$$

where  $n_i$  = number of peroxygen groups per molecule of organic peroxide  $i$ ;

$c_i$  = concentration (mass in percentage) of organic peroxide  $i$ ; and

$m_i$  = molecular mass of organic peroxide  $i$ .

5.3.2.2 Organic peroxides are classified according to the degree of danger they present.

≠ 5.3.2.3 Organic peroxides permitted for transport are listed in 5.3.2.4. For each permitted substance, Table 2-7 assigns the appropriate generic entry in the Dangerous Goods List (UN 3103 to 3120) and provides relevant information. The generic entries specify:

- a) organic peroxide type (B to F);
- b) physical state (liquid or solid); and
- c) temperature control, when required (see 5.3.3).

5.3.2.3.1 Mixtures of the listed formulations may be classified as the same type of organic peroxide as that of the most dangerous component and be transported under the conditions of transport given for this type. However, as two stable components can form a thermally less stable mixture, the self-accelerating decomposition temperature (SADT) of the mixture must be determined and, if necessary, temperature control applied as required by 5.3.3.

#### 5.3.2.4 List of currently assigned organic peroxides

≠ The following table (Table 2-7) is reproduced from 2.5.3.2.4 of the UN *Recommendations on the Transport of Dangerous Goods* (Fifteenth revised edition), with irrelevant material removed.

5.3.2.5 Classification of organic peroxides not listed in 5.3.2.4 and assignment to a generic entry must be made by the appropriate authority of the State of Origin on the basis of a test report. Principles applying to the classification of such substances are provided in 2.5.3.3 of the UN Recommendations. The applicable classification procedures, test methods and criteria, and an example of a suitable test report, are given in the current edition of the UN *Manual of Tests and Criteria*, Part II. The statement of approval must contain the classification and the relevant transport conditions.

5.3.2.6 Samples of new formulations of organic peroxides not listed in 5.3.2.4 for which complete test data are not available and which are to be transported for further testing or evaluation may be assigned to one of the appropriate entries for **Organic peroxide Type C** provided that the following conditions are met:

- a) the available data indicate that the sample would be no more dangerous than organic peroxide type B;
- b) it is packed in a combination packaging consisting of a plastic IP.2 inner packaging with a capacity not exceeding 0.5 L or 0.5 kg which is placed in a wooden box (4C1), plywood box (4D) or fibreboard box (4G) with the maximum net quantity per package not exceeding 1 L or 1 kg; and
- c) the available data indicate that the control temperature, if any, is sufficiently low to prevent any dangerous decomposition and sufficiently high to prevent any dangerous phase separation.

### 5.3.3 Temperature control requirements

5.3.3.1 An organic peroxide formulation must be regarded as possessing explosive properties when, in laboratory testing, the formulation is liable to detonate, to deflagrate rapidly or to show a violent effect when heated under confinement. With the exception of organic peroxides of type B, which are forbidden for transport by air under any circumstance, organic peroxides requiring temperature control during transport are forbidden for transport by air unless exempted (see 1;1.1.2).

5.3.3.2 The following organic peroxides must be subjected to temperature control during carriage:

- a) organic peroxides types B and C with an SADT  $\leq 50^{\circ}\text{C}$ ;
- b) organic peroxides type D showing a medium effect when heated under confinement with an SADT  $\leq 50^{\circ}\text{C}$  or showing a low or no effect when heated under confinement with an SADT  $\leq 45^{\circ}\text{C}$ ; and
- c) organic peroxides types E and F with an SADT  $\leq 45^{\circ}\text{C}$ .

5.3.3.3 Test methods for determining the SADT are given in the UN *Manual of Tests and Criteria*, Part III, section 28. The test selected must be conducted in a manner which is representative of the package to be transported.

5.3.3.4 Test methods for determining the flammability are given in the UN *Manual of Tests and Criteria*, Part III, subsection 32.4.

### 5.3.4 Desensitization of organic peroxides

5.3.4.1 In order to ensure safety during transport, organic peroxides are, in many cases, desensitized by organic liquids or solids, inorganic solids or water. Where a percentage of a substance is stipulated, this refers to the percentage by mass, rounded to the nearest whole number. In general, desensitization should be such that in case of spillage or fire, the organic peroxide may not concentrate to a dangerous extent.

5.3.4.2 Unless otherwise stated for the individual organic peroxide formulation, the following definitions apply for diluents used for desensitization:

- a) *Diluents type A* are organic liquids which are compatible with the organic peroxide and which have a boiling point of not less than  $150^{\circ}\text{C}$ . Type A diluents may be used for desensitizing all organic peroxides;
- b) *Diluents type B* are organic liquids which are compatible with the organic peroxide and which have a boiling point of less than  $150^{\circ}\text{C}$  but not less than  $60^{\circ}\text{C}$  and a flash point of not less than  $5^{\circ}\text{C}$ . Type B diluents may be used for desensitization of all provided that the boiling point of the liquid is at least  $60^{\circ}\text{C}$  higher than the SADT in a 50 kg package.

5.3.4.3 Diluents, other than type A or type B, may be added to organic peroxide formulations as listed in Table 2-7 provided that they are compatible. However, replacement of all or part of a type A or type B diluent by another diluent with differing properties requires that the organic peroxide formulation be reassessed in accordance with the normal acceptance procedure for Division 5.2.

5.3.4.4 Water may only be used for the desensitization of organic peroxides which are shown in Table 2-7 or in the statement of approval according to 5.3.2.5 with the approval of the appropriate authority of the State of Manufacture or when the organic peroxide formulation is specified as being with water or as a stable dispersion in water.

5.3.4.5 Organic and inorganic solids may be used for desensitization of organic peroxides provided that they are compatible.

5.3.4.6 Compatible liquids and solids are those which have no detrimental influence on the thermal stability and hazard type of the organic peroxide formulation.

Table 2-7. List of currently assigned organic peroxides in packages

Note.— Peroxides to be transported must fulfil the classification and the control and emergency temperatures (derived from the self-accelerating decomposition temperature (SADT)) as listed.

Organic peroxide	Concentration (per cent)	Diluent type A (per cent)	Diluent type B (per cent) (Note 1)	Inert solid (per cent)	Water (per cent)	Control temperature (°C)	Emergency temperature (°C)	UN generic entry	Notes

**Notes:**

1. Diluent type B may always be replaced by diluent type A. Boiling point diluent type B should be at least 60°C higher than the SADT of the organic peroxide.
2. Available oxygen ≤4.7 per cent.
3. "EXPLOSIVE" subsidiary risk label required and consequently forbidden for transport by air under any circumstance.
4. Diluent may be replaced by Di-tert-butyl peroxide.
5. Available oxygen ≤9 per cent.
6. With ≤9 per cent hydrogen peroxide; available oxygen ≤10 per cent.
7. Only non-metallic packagings allowed.
8. Available oxygen >10 per cent and ≤10.7 per cent, with or without water.
9. Available oxygen ≤10 per cent, with or without water.
10. Available oxygen ≤8.2 per cent, with or without water.
11. See 5.3.2.6.
13. "CORROSIVE" subsidiary risk label required (see Figure 5-22).
14. Peroxyacetic acid formulations which fulfil the criteria of 5.3.2.5.
15. Peroxyacetic acid formulations which fulfil the criteria of 5.3.2.5.
16. Peroxyacetic acid formulations which fulfil the criteria of 5.3.2.5.
17. Addition of water to this organic peroxide will decrease its thermal stability.
18. No "CORROSIVE" subsidiary risk label required for concentrations below 80 per cent.
19. Mixtures with hydrogen peroxide, water and acid(s).
20. With diluent type A, with or without water.
21. With ≥25 per cent diluent type A by mass, and in addition ethylbenzene.
22. With ≥19 per cent diluent type A by mass, and in addition methyl isobutyl ketone.
23. With <6 per cent di-tert-butyl peroxide.
24. With ≤8 per cent 1-isopropylhydroperoxy-4-isopropylhydroxybenzene.
25. Diluent type B with boiling point >110°C.
26. With <0.5 per cent hydroperoxides content.
27. For concentrations more than 56 per cent, "CORROSIVE" subsidiary risk label required (see Figure 5-22).
28. Available active oxygen ≤7.6 per cent in diluent type A having a 95 per cent boil-off point in the range of 220-260°C.
29. Not subject to the requirements of these Instructions for Division 5.2.
- + 30. Diluent type B with boiling point >130°C.
- + 31. Active oxygen ≤6.7 per cent.

## Chapter 6

### CLASS 6 — TOXIC AND INFECTIOUS SUBSTANCES

#### INTRODUCTORY NOTE

*Note.—* Toxins from plant, animal or bacterial sources which do not contain any infectious substances or toxins that are not contained in substances which are infectious substances should be considered for classification in Division 6.1 and assignment to UN 3172.

#### 6.1 DEFINITIONS

Class 6 is divided into two divisions as follows:

- a) Division 6.1 — Toxic substances.

Substances liable either to cause death or injury or to harm human health if swallowed, if inhaled or by skin contact.

*Note.—* In these Instructions “poisonous” has the same meaning as “toxic”.

- b) Division 6.2 — Infectious substances.

Substances known to contain, or reasonably expected to contain, pathogens. Pathogens are defined as micro-organisms (including bacteria, viruses, rickettsiae, parasites, fungi) and other agents such as prions, which can cause disease in humans or animals.

#### 6.2 DIVISION 6.1 — TOXIC SUBSTANCES

##### 6.2.1 Definitions

For the purposes of these Instructions:

6.2.1.1 *LD<sub>50</sub> (median lethal dose) for acute oral toxicity* is the statistically derived single dose of a substance that can be expected to cause death within 14 days in 50 per cent of young adult albino rats when administered by the oral route. The *LD<sub>50</sub>* value is expressed in terms of mass of test substance per mass of test animal (mg/kg).

6.2.1.2 *LD<sub>50</sub> for acute dermal toxicity* is that dose of the substance which, administered by continuous contact for 24 hours with the bare skin of albino rabbits, is most likely to cause death within 14 days in half of the animals tested. The number of animals tested must be sufficient to give a statistically significant result and be in conformity with good pharmacological practices. The result is expressed in mg/kg body mass.

6.2.1.3 *LC<sub>50</sub> for acute toxicity on inhalation* is that concentration of vapour, mist or dust which, administered by continuous inhalation for one hour to both male and female young adult albino rats, is most likely to cause death within 14 days in half of the animals tested. A solid substance should be tested if at least 10 per cent (by mass) of its total mass is likely to be dust in a respirable range, e.g. the aerodynamic diameter of that particle-fraction is 10 µm or less. A liquid substance should be tested if a mist is likely to be generated in a leakage of the transport containment. Both for solid and liquid substances more than 90 per cent (by mass) of a specimen prepared for inhalation toxicity should be in the respirable range as defined above. The result is expressed in mg/L of air for dusts and mists or in mL/m<sup>3</sup> of air (parts per million) for vapours.

##### 6.2.2 Assignment of packing groups

6.2.2.1 Substances of Division 6.1, including pesticides, are allocated among the three packing groups, according to the degree of their toxic hazards in transport as follows:

- a) Packing Group I — Substances and preparations presenting a very severe toxicity risk;
- b) Packing Group II — Substances and preparations presenting a serious toxicity risk;
- c) Packing Group III — Substances and preparations presenting a relatively low toxicity risk.

6.2.2.2 In making this grouping, account must be taken of human experience in instances of accidental poisoning, and of special properties possessed by any individual substance, such as liquid state, high volatility, any special likelihood of penetration, and special biological effects.

6.2.2.3 In the absence of human experience, the grouping must be based on the available data from animal experiments. Three possible routes of administrations must be examined. These routes are exposure through:

- a) oral ingestion;
- b) dermal contact; and
- c) inhalation of dusts, mists, or vapours.

6.2.2.3.1 Appropriate animal tests for the various routes of exposure are described in 6.2.1. When a substance exhibits a different order of toxicity by two or more of these routes of administration, the highest degree of danger must be assigned.

6.2.2.4 The criteria to be applied for grouping a substance according to the toxicity it exhibits by all three routes of administration are presented in the following paragraphs.

6.2.2.4.1 The grouping criteria for the oral and dermal routes as well as for inhalation of dusts and mists are as shown in Table 2-8.

*Note.* — Substances meeting the criteria of Class 8 and with an inhalation toxicity of dusts and mists ( $LC_{50}$ ) leading to Packing Group I are only accepted for an allocation to Division 6.1 if the toxicity through oral ingestion or dermal contact is at least in the range of Packing Group I or II. Otherwise, an allocation to Class 8 is made when appropriate (see 8.2.3).

6.2.2.4.2 The criteria for inhalation toxicity of dusts and mists in 6.2.2.4.1 are based on  $LC_{50}$  data relating to 1-hour exposures, and where such information is available, it must be used. However, where only  $LC_{50}$  data relating to 4-hour exposures to dusts and mists are available, such figures can be multiplied by four and the product substituted in the above criteria, i.e.  $LC_{50}(4\text{ h}) \times 4$  is considered the equivalent of  $LC_{50}(1\text{ h})$ .

6.2.2.4.3 Liquids having toxic vapours must be assigned to the packing groups shown in Table 2-9, where V is that saturated vapour concentration in the air of the substance in  $\text{mL/m}^3$  at  $20^\circ\text{C}$  and standard atmospheric pressure.

6.2.2.4.4 In Figure 2-1, the criteria according to 6.2.2.4.3 are expressed in graphical form, as an aid to easy classification. However, because of approximations inherent in the use of graphs, substances on or near packing group borderlines must be checked using numerical criteria.

**Table 2-8. Grouping criteria for administration through oral ingestion, dermal contact and inhalation of dusts and mists**

Packing group	Oral toxicity $LD_{50}$ (mg/kg)	Dermal toxicity $LD_{50}$ (mg/kg)	Inhalation toxicity by dusts and mists $LC_{50}$ (mg/L)
I	$\leq 5.0$	$\leq 50$	$\leq 0.2$
II	$> 5.0$ and $\leq 50$	$> 50$ and $\leq 200$	$> 0.2$ and $\leq 2.0$
III <sup>a</sup>	$> 50$ and $\leq 300$	$> 200$ and $\leq 1\ 000$	$> 2.0$ and $\leq 4.0$

a. Tear gas substances must be included in Packing Group II even if their toxicity data correspond to Packing Group III values.

**Table 2-9. Criteria for inhalation**

Packing Group I	$V \geq 10 LC_{50}$ and $LC_{50} \leq 1\ 000\ \text{mL/m}^3$
Packing Group II	$V \geq LC_{50}$ and $LC_{50} \leq 3\ 000\ \text{mL/m}^3$ and not meeting the criteria for Packing Group I
Packing Group III	$V \geq 0.2 LC_{50}$ and $LC_{50} \leq 5\ 000\ \text{mL/m}^3$ and not meeting the criteria for Packing Groups I and II

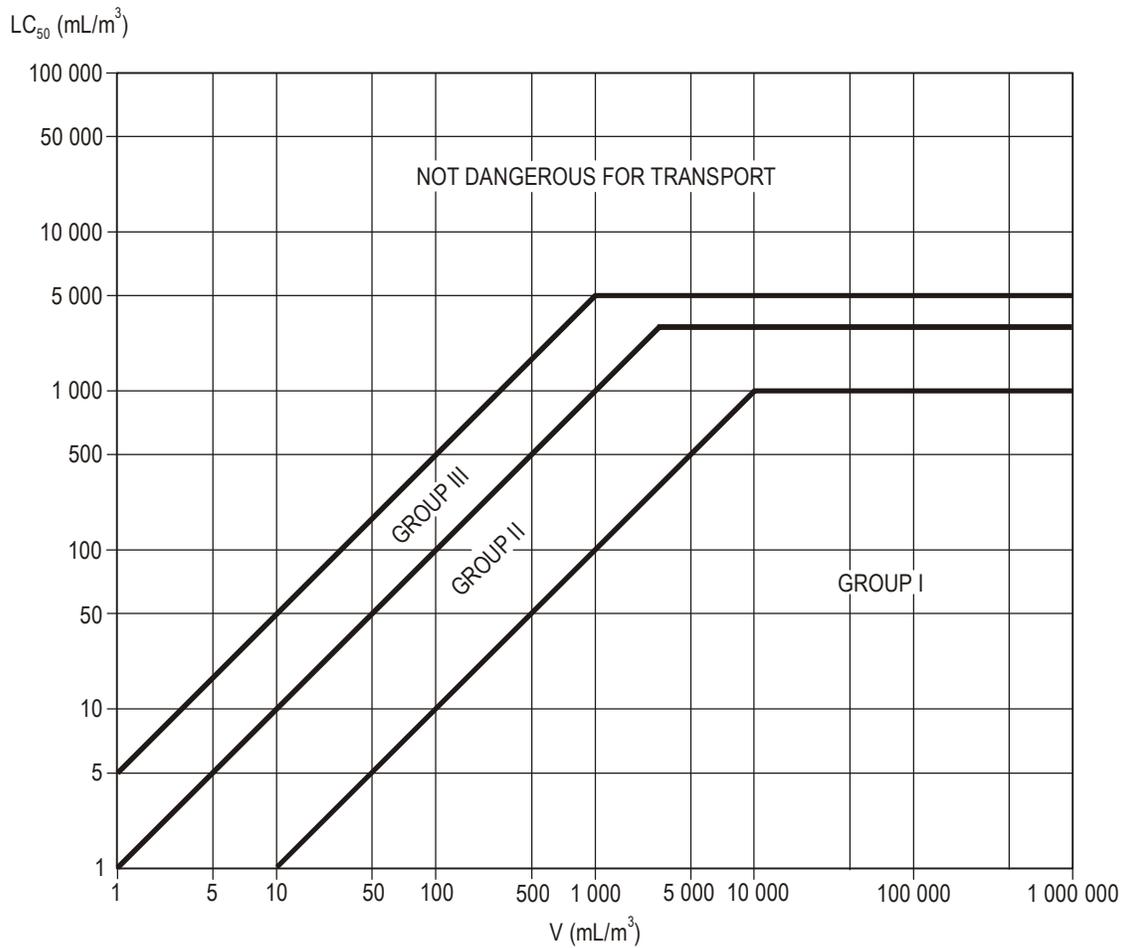

Figure 2-1. Criteria for inhalation of vapours

6.2.2.4.5 The criteria for inhalation toxicity of vapours in 6.2.2.4.3 are based on LC<sub>50</sub> data relating to 1-hour exposures, and where such information is available, it must be used. However, where only LC<sub>50</sub> data relating to 4-hour exposures to the vapours are available, such figures can be multiplied by two and the product substituted in the above criteria, i.e. LC<sub>50</sub> (4 h) × 2 is considered the equivalent of LC<sub>50</sub> (1 h).

6.2.2.4.6 Mixtures of liquids that are toxic by inhalation must be assigned to packing groups according to 6.2.2.4.7 or 6.2.2.4.8.

6.2.2.4.7 If LC<sub>50</sub> data is available for each of the toxic substances comprising a mixture, the packing group may be determined as follows:

- a) Estimate the LC<sub>50</sub> of the mixture using the formula:

$$LC_{50} (\text{mixture}) = \frac{1}{\sum_{i=1}^n \frac{f_i}{LC_{50i}}}$$

where  $f_i$  = mole fraction of the  $i^{\text{th}}$  component substance of the liquid, and

where LC<sub>50i</sub> = mean lethal concentration of the  $i^{\text{th}}$  component substance in mL/m<sup>3</sup>.

- b) Estimate the volatility of each component substance using the formula:

$$V_i = P_i \times \frac{106}{101.3} \text{ mL/m}^3$$

where  $P_i$  = partial pressure of the  $i^{\text{th}}$  component substance in kPa at 20°C and one atmosphere pressure.

- c) Calculate the ratio of the volatility to the  $LC_{50}$  using the formula:

$$R = \sum_{i=1}^n \frac{V_i}{LC_{50i}}$$

- d) Using the calculated values  $LC_{50}$  (mixture) and R, the packing group for the mixture is determined:

Packing Group I:  $R \geq 10$  and  $LC_{50}$  (mixture)  $\leq 1\,000 \text{ mL/m}^3$

Packing Group II:  $R \geq 1$  and  $LC_{50}$  (mixture)  $\leq 3\,000 \text{ mL/m}^3$  and not meeting criteria for Group I

Packing Group III:  $R \geq 1/5$  and  $LC_{50}$  (mixture)  $\leq 5\,000 \text{ mL/m}^3$  and not meeting criteria for Group I or II.

6.2.2.4.8 In the absence of  $LC_{50}$  data on the toxic constituent substances, the mixture may be assigned a packing group based on the following simplified threshold toxicity tests. When these threshold tests are used, the most restrictive packing group must be determined and used for transporting the mixture.

- a) A mixture is assigned to Packing Group I only if it meets both of the following criteria:
- A sample of the liquid mixture is vaporized and diluted with air to create a test atmosphere of  $1\,000 \text{ mL/m}^3$  vaporized mixture in air. Ten albino rats (5 male and 5 female) are exposed to the test atmosphere for 1 hour and observed for 14 days. If 5 or more of the animals die within the 14-day observation period, the mixture is presumed to have an  $LC_{50}$  equal to or less than  $1\,000 \text{ mL/m}^3$ .
  - A sample of the vapour in equilibrium with the liquid mixture at 20°C is diluted with 9 equal volumes of air to form a test atmosphere. Ten albino rats (5 male and 5 female) are exposed to the test atmosphere for 1 hour and observed for 14 days. If 5 or more of the animals die within the 14-day observation period, the mixture is presumed to have a volatility equal to or greater than 10 times the mixture  $LC_{50}$ .
- b) A mixture is assigned to Packing Group II only if it meets both of the following criteria, and the mixture does not meet the criteria for Packing Group I:
- A sample of the liquid mixture is vaporized and diluted with air to create a test atmosphere of  $3\,000 \text{ mL/m}^3$  vaporized mixture in air. Ten albino rats (5 male and 5 female) are exposed to the test atmosphere for 1 hour and observed for 14 days. If 5 or more of the animals die within the 14-day observation period, the mixture is presumed to have an  $LC_{50}$  equal to or less than  $3\,000 \text{ mL/m}^3$ .
  - A sample of the vapour in equilibrium with the liquid mixture at 20°C is used to form a test atmosphere. Ten albino rats (5 male and 5 female) are exposed to the test atmosphere for 1 hour and observed for 14 days. If 5 or more of the animals die within the 14-day observation period, the mixture is presumed to have a volatility equal to or greater than the mixture  $LC_{50}$ .
- c) A mixture is assigned to Packing Group III only if it meets both of the following criteria, and the mixture does not meet the criteria for Packing Groups I or II:
- A sample of the liquid mixture is vaporized and diluted with air to create a test atmosphere of  $5\,000 \text{ mL/m}^3$  vaporized mixture in air. Ten albino rats (5 male and 5 female) are exposed to the test atmosphere for 1 hour and observed for 14 days. If 5 or more of the animals die within the 14-day observation period, the mixture is presumed to have an  $LC_{50}$  equal to or less than  $5\,000 \text{ mL/m}^3$ .
  - The vapour pressure of the liquid mixture is measured and if the vapour pressure is equal to or greater than  $1\,000 \text{ mL/m}^3$ , the mixture is presumed to have a volatility equal to or greater than  $1/5$  the mixture  $LC_{50}$ .

### 6.2.3 Methods for determining oral and dermal toxicity of mixtures

6.2.3.1 When classifying and assigning the appropriate packing group to mixtures in Division 6.1, in accordance with the oral and dermal toxicity criteria in Table 2-8, it is necessary to determine the acute  $LD_{50}$  of the mixture.

6.2.3.2 If a mixture contains only one active substance, and the  $LD_{50}$  of that constituent is known, in the absence of reliable acute oral and dermal toxicity data on the actual mixture to be transported, the oral or dermal  $LD_{50}$  may be obtained by the following method:

LD<sub>50</sub> value of preparation =

$$\frac{\text{LD}_{50} \text{ value of active substance} \times 100}{\text{percentage of active substance by mass}}$$

6.2.3.3 If a mixture contains more than one active constituent, there are three possible approaches that may be used to determine the oral or dermal LD<sub>50</sub> of the mixture. The preferred method is to obtain reliable acute oral and dermal toxicity data on the actual mixture to be transported. If reliable and accurate data are not available, then either of the following methods may be performed:

- a) classify the formulation according to the most hazardous constituent of the mixture as if that constituent were present in the same concentration as the total concentration of all active constituents; or
- b) apply the formula:

$$\frac{C_A}{T_A} + \frac{C_B}{T_B} + \frac{C_Z}{T_Z} = \frac{100}{T_M}$$

where:

C = the per cent concentration of constituent A, B ... Z in the mixture

T = the oral LD<sub>50</sub> values of constituent A, B ... Z

T<sub>M</sub> = the oral LD<sub>50</sub> value of the mixture.

*Note.— This formula can also be used for dermal toxicities provided that this information is available on the same species for all constituents. The use of this formula does not take into account any potentiation or protective phenomena.*

#### 6.2.4 Classification of pesticides

6.2.4.1 All active pesticide substances and their preparations for which the LC<sub>50</sub> and/or LD<sub>50</sub> values are known and which are classified in Division 6.1 must be classified under appropriate packing groups in accordance with the criteria given in 6.2.2. Substances and preparations which are characterized by subsidiary risks must be classified according to the precedence of hazards table (Table 2-1) with the assignment of appropriate packing groups.

6.2.4.2 If the oral or dermal LD<sub>50</sub> value for a pesticide preparation is not known, but the LD<sub>50</sub> value of its active substance(s) is known, the LD<sub>50</sub> value for the preparation may be obtained by applying the procedures in 6.2.3.

*Note.— LD<sub>50</sub> toxicity data for a number of common pesticides may be obtained from the most current edition of the document The WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification available from the International Programme on Chemical Safety, World Health Organization (WHO), 1211 Geneva 27, Switzerland. While that document may be used as a source of LD<sub>50</sub> data for pesticides, its classification system should not be used for purposes of transport classification of, or assignment of packing groups to, pesticides which must be in accordance with these Instructions.*

6.2.4.3 The proper shipping name used in the transport of the pesticide must be selected on the basis of the active ingredient, of the physical state of the pesticide and any subsidiary risks it may exhibit.

### 6.3 DIVISION 6.2 — INFECTIOUS SUBSTANCES

#### 6.3.1 Definitions

For the purposes of these Instructions:

6.3.1.1 *Infectious substances* are substances which are known to contain, or are reasonably expected to contain, pathogens. Pathogens are defined as micro-organisms (including bacteria, viruses, rickettsiae, parasites, fungi) and other agents such as prions, which can cause disease in humans or animals.

6.3.1.2 *Biological products* are those products derived from living organisms which are manufactured and distributed in accordance with the requirements of appropriate national authorities, which may have special licensing requirements, and are used either for prevention, treatment or diagnosis of disease in humans or animals, or for development, experimental or investigational purposes related thereto. They include, but are not limited to, finished or unfinished products such as vaccines.

6.3.1.3 *Cultures* are the result of a process by which pathogens are intentionally propagated. This definition does not include patient specimens as defined in 6.3.1.4.

6.3.1.4 *Patient specimens* are those collected directly from humans or animals, including, but not limited to, excreta, secretions, blood and its components, tissue and tissue fluid swabs, and body parts being transported for purposes such as research, diagnosis, investigational activities, and disease treatment and prevention.

6.3.1.5 *Medical or clinical wastes* are wastes derived from the medical treatment of animals or humans or from bio-research.

### 6.3.2 Classification of infectious substances

6.3.2.1 Infectious substances must be classified in Division 6.2 and assigned to UN 2814, UN 2900, UN 3291 or UN 3373 as appropriate.

6.3.2.2 Infectious substances are divided into the following categories:

6.3.2.2.1 *Category A*: An infectious substance which is transported in a form that, when exposure to it occurs, is capable of causing permanent disability, life-threatening or fatal disease in otherwise healthy humans or animals. Indicative examples of substances that meet these criteria are given in Table 2-10.

*Note.* — *An exposure occurs when an infectious substance is released outside of the protective packaging resulting in physical contact with humans or animals.*

- a) Infectious substances meeting these criteria which cause disease in humans or in both humans and animals must be assigned to UN 2814. Infectious substances which cause disease only in animals must be assigned to UN 2900.
- b) Assignments to UN 2814 or UN 2900 must be based on the known medical history and symptoms of the source human or animal, endemic local conditions, or professional judgement concerning individual circumstances of the source human or animal.

*Note 1.*— *The proper shipping name for UN 2814 is **Infectious substance, affecting humans**. The proper shipping name for UN 2900 is **Infectious substance, affecting animals only**.*

*Note 2.*— *Table 2-10 is not exhaustive. Infectious substances, including new or emerging pathogens, which do not appear in Table 2-10 but which meet the same criteria must be assigned to Category A. In addition, if there is doubt as to whether or not a substance meets the criteria it must be included in Category A.*

*Note 3.*— *In Table 2-10, the micro-organisms written in italics are bacteria, mycoplasma, rickettsiae or fungi.*

6.3.2.2.2 *Category B*: An infectious substance which does not meet the criteria for inclusion in Category A. Infectious substances in Category B must be assigned to UN 3373.

*Note.*— *The proper shipping name of UN 3373 is **Biological substances, Category B**.*

#### 6.3.2.3 Exceptions

6.3.2.3.1 Substances which do not contain infectious substances or substances which are unlikely to cause disease in humans or animals are not subject to these Instructions unless they meet the criteria for inclusion in another class.

6.3.2.3.2 Substances containing micro-organisms which are non-pathogenic to humans or animals are not subject to these Instructions unless they meet the criteria for inclusion in another class.

6.3.2.3.3 Substances in a form that any present pathogens have been neutralized or inactivated such that they no longer pose a health risk are not subject to these Instructions unless they meet the criteria for inclusion in another class.

6.3.2.3.4 Environmental samples (including food and water samples) which are not considered to pose a significant risk of infection are not subject to these Instructions unless they meet the criteria for inclusion in another class.

6.3.2.3.5 Dried blood spots, collected by applying a drop of blood onto absorbent material, or faecal occult blood screening tests and blood or blood components that have been collected for the purposes of transfusion or for the preparation of blood products to be used for transfusion or transplantation and any tissues or organs intended for use in transplantation are not subject to these Instructions.

6.3.2.3.6 Patient specimens for which there is minimal likelihood that pathogens are present are not subject to these Instructions if the specimen is transported in a packaging which will prevent any leakage and which is marked with the words "Exempt human specimen" or "Exempt animal specimen", as appropriate. The packaging must meet the following conditions:

- a) The packaging must consist of three components:
  - i) a leakproof primary receptacle(s);

Table 2-10. Indicative examples of infectious substances included in Category A in any form unless otherwise indicated (6.3.2.2.1 a))

UN Number and Proper Shipping Name	Micro-organism
<p><b>UN 2814</b> Infectious substances affecting humans</p>	<p><i>Bacillus anthracis</i> (cultures only)  <i>Brucella abortus</i> (cultures only)  <i>Brucella melitensis</i> (cultures only)  <i>Brucella suis</i> (cultures only)  <i>Burkholderia mallei</i> – <i>Pseudomonas mallei</i> – Glanders (cultures only)  <i>Burkholderia pseudomallei</i> – <i>Pseudomonas pseudomallei</i> (cultures only)  <i>Chlamydia psittaci</i> – avian strains (cultures only)  <i>Clostridium botulinum</i> (cultures only)  <i>Coccidioides immitis</i> (cultures only)  <i>Coxiella burnetii</i> (cultures only)  Crimean-Congo hemorrhagic fever virus  Dengue virus (cultures only)  Eastern equine encephalitis virus (cultures only)  <i>Escherichia coli</i>, verotoxigenic (cultures only)  Ebola virus  Flexal virus  <i>Francisella tularensis</i> (cultures only)  Guanarito virus  Hantaan virus  Hantaviruses causing haemorrhagic fever with renal syndrome  Hendra virus  Hepatitis B virus (cultures only)  Herpes B virus (cultures only)  Highly pathogenic avian influenza virus (cultures only)  Human immunodeficiency virus (cultures only)  Japanese Encephalitis virus (cultures only)  Junin virus  Kysanur Forest disease virus  Lassa virus  Machupo virus  Marburg virus  Monkeypox virus  <i>Mycobacterium tuberculosis</i> (cultures only)  Nipah virus  Omsk hemorrhagic fever virus  Poliovirus (cultures only)  Rabies virus (cultures only)  <i>Rickettsia prowazekii</i> (cultures only)  <i>Rickettsia rickettsii</i> (cultures only)  Rift Valley fever virus (cultures only)  Russian spring-summer encephalitis virus (cultures only)  Sabia virus  <i>Shigella dysenteriae</i> type 1 (cultures only)  Tick-borne encephalitis virus (cultures only)  Variola virus  Venezuelan equine encephalitis virus (cultures only)  West Nile virus (cultures only)  Yellow fever virus (cultures only)  <i>Yersinia pestis</i> (cultures only)</p>
<p><b>UN 2900</b> Infectious substances affecting animals only</p>	<p>African swine fever virus (cultures only)  Avian paramyxovirus Type 1 – Velogenic Newcastle disease virus (cultures only)  Classical swine fever virus (cultures only)  Foot and mouth disease virus (cultures only)  Goatpox virus (cultures only)  Lumpy skin disease virus (cultures only)  <i>Mycoplasma mycoides</i> – Contagious bovine pleuropneumonia (cultures only)  Peste des petits ruminants virus (cultures only)  Rinderpest virus (cultures only)  Sheep-pox virus (cultures only)  Swine vesicular disease virus (cultures only)  Vesicular stomatitis virus (cultures only)</p>

- ii) a leakproof secondary packaging; and
  - iii) an outer packaging of adequate strength for its capacity, mass and intended use, and with at least one surface having minimum dimensions of 100 mm × 100 mm;
- b) For liquids, absorbent material in sufficient quantity to absorb the entire contents must be placed between the primary receptacle(s) and the secondary packaging so that, during transport, any release or leak of a liquid substance will not reach the outer packaging and will not compromise the integrity of the cushioning material;
  - c) When multiple fragile primary receptacles are placed in a single secondary packaging, they must be either individually wrapped or separated to prevent contact between them.

≠ *Note.— In determining whether a patient specimen has a minimum likelihood that pathogens are present, an element of professional judgement is required to determine if a substance is exempt under this paragraph. That judgement should be based on the known medical history, symptoms and individual circumstances of the source, human or animal, and endemic local conditions. Examples of specimens which may be transported under this paragraph include blood or urine tests to monitor cholesterol levels, blood glucose levels, hormone levels, or prostate specific antibodies (PSA); tests required to monitor organ function such as heart, liver or kidney function for humans or animals with non-infectious diseases, or therapeutic drug monitoring; tests conducted for insurance or employment purposes and are intended to determine the presence of drugs or alcohol; pregnancy tests; biopsies to detect cancer; and antibody detection in humans or animals in the absence of any concern for infection (e.g. evaluation of vaccine induced immunity, diagnosis of autoimmune disease, etc.).*

### 6.3.3 Biological products

For the purposes of these Instructions, biological products are divided into the following groups:

- a) Those which are manufactured and packaged in accordance with the requirements of appropriate national authorities and transported for the purposes of final packaging or distribution, and use for personal health care by medical professionals or individuals. Substances in this group are not subject to these Instructions.
- b) Those which do not fall under paragraph a) and are known or reasonably believed to contain infectious substances and which meet the criteria for inclusion in Category A or Category B. Substances in this group must be assigned to UN 2814, UN 2900 or UN 3373, as appropriate.

*Note.— Some licensed biological products may present a biohazard only in certain parts of the world. In that case, appropriate national authorities may require these biological products to be in compliance with local requirements for infectious substances or may impose other restrictions.*

### 6.3.4 Genetically modified micro-organisms and organisms

Genetically modified micro-organisms not meeting the definition of infectious substances must be classified according to Chapter 9.

### 6.3.5 Medical or clinical wastes

6.3.5.1 Medical or clinical wastes containing Category A infectious substances must be assigned to UN 2814 or UN 2900 as appropriate. Medical or clinical wastes containing infectious substances in Category B must be assigned to UN 3291.

≠ 6.3.5.2 Medical or clinical wastes that are reasonably believed to have a low probability of containing infectious substances must be assigned to UN 3291. For the assignment, international, regional or national waste catalogues may be taken into account.

≠ *Note.— The proper shipping name for UN 3291 is **Clinical waste, unspecified, n.o.s. or Biomedical waste, n.o.s. or Medical waste, n.o.s. or Regulated medical waste, n.o.s.***

6.3.5.3 Decontaminated medical or clinical wastes that previously contained infectious substances are not subject to these Instructions unless they meet the criteria for inclusion in another class.

### 6.3.6 Infected animals

6.3.6.1 A live animal that has been intentionally infected and is known or suspected to contain an infectious substance must not be transported by air unless the infectious substance contained cannot be consigned by any other means. Infected animals may only be transported under terms and conditions approved by the appropriate national authority.

6.3.6.2 Unless an infectious substance cannot be consigned by any other means, live animals must not be used to consign such a substance.

- ≠ 6.3.6.3 Animal material affected by pathogens of Category A or which would be assigned to Category A in cultures only, must be assigned to UN 2814 or UN 2900 as appropriate.

### **6.3.7 Patient specimens**

Patient specimens must be assigned to UN 2814, UN 2900 or UN 3373 as appropriate except if they comply with 6.3.2.3.

## Chapter 7

### CLASS 7 — RADIOACTIVE MATERIAL

*Parts of this Chapter are affected by State Variations BE 4, CA 1, CA 3, CA 4, CH 4  
DE 3, DK 1, DQ 1, JP 26, RU 1; see Table A-1*

*Note.— For Class 7, the type of packaging may have a decisive effect on classification.*

#### 7.1 DEFINITIONS

**7.1.1 Radioactive material.** Any material containing radionuclides where both the activity concentration and the total activity in the consignment exceed the values specified in 7.2.2.1 to 7.2.2.6.

#### 7.1.2 Contamination

**Contamination.** The presence of a radioactive substance on a surface in quantities in excess of 0.4 Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 0.04 Bq/cm<sup>2</sup> for all other alpha emitters.

**Non-fixed contamination.** Contamination that can be removed from a surface during routine conditions of transport.

**Fixed contamination.** Contamination other than non-fixed contamination.

#### 7.1.3 Definitions of specific terms

$A_1$  and  $A_2$ :

$A_1$ . The activity value of special form radioactive material, which is listed in Table 2-15 or derived in 7.2.2.2 and is used to determine the activity limits for the requirements of these Instructions.

$A_2$ . The activity value of radioactive material, other than special form radioactive material, which is listed in Table 2-15 or derived in 7.2.2.2 and is used to determine the activity limits for the requirements of these Instructions.

**Fissile material.** Uranium-233, uranium-235, plutonium-239, plutonium-241, or any combination of these radionuclides. Excepted from this definition are:

- a) natural uranium or depleted uranium which is unirradiated; and
- b) natural uranium or depleted uranium which has been irradiated in thermal reactors only.

**Freight container in the case of radioactive material transport.** An article of transport equipment designed to facilitate the transport of packaged goods by one or more modes of transport without intermediate reloading, which is of a permanent enclosed character, rigid and strong enough for repeated use, and must be fitted with devices facilitating its handling, particularly in transfer between aircraft and from one mode of transport to another. A small freight container is that which has either an overall outer dimension less than 1.5 m, or an internal volume of not more than 3 m<sup>3</sup>. Any other freight container is considered to be a large freight container. For the transport of Class 7 material, a freight container may be used as a packaging.

**Low dispersible radioactive material.** A solid radioactive material or a solid radioactive material in a sealed capsule, that has limited dispersibility and is not in powder form.

**Low specific activity (LSA) material.** Radioactive material which by its nature has a limited specific activity, or radioactive material for which limits of estimated average specific activity apply. External shielding materials surrounding the LSA material must not be considered in determining the estimated average specific activity.

**Low toxicity alpha emitters.** Natural uranium; depleted uranium; natural thorium; uranium-235 or uranium-238; thorium-232; thorium-228 and thorium-230 when contained in ores or physical and chemical concentrates; or alpha emitters with a half-life of less than 10 days.

**Packaging in the case of radioactive material.** The assembly of components necessary to enclose the radioactive contents completely. It may, in particular, consist of one or more receptacles, absorbent materials, spacing structures, radiation shielding and service equipment for filling, emptying, venting and pressure relief; devices for cooling, absorbing mechanical shocks, handling and tie-down, thermal insulation; and service devices integral to the package. The packaging may be a box, drum or similar receptacle, or may also be a freight container.

*Note.*— For packagings for other dangerous goods, see definitions under 1;3.1.1.

*Special form radioactive material.* Either:

- a) an indispersible solid radioactive material; or
- b) a sealed capsule containing radioactive material.

*Specific activity of a radionuclide.* The activity per unit mass of that nuclide. The specific activity of a material must mean the activity per unit mass of the material in which the radionuclides are essentially uniformly distributed.

*Surface contaminated object (SCO).* A solid object which is not itself radioactive but which has radioactive material distributed on its surfaces.

*Transport index (TI) assigned to a package, overpack or freight container, or to unpackaged LSA-I or SCO-I.* A number which is used to provide control over radiation exposure.

*Unirradiated thorium.* Thorium containing not more than  $10^{-7}$  g of uranium-233 per gram of thorium-232.

*Unirradiated uranium.* Uranium containing not more than  $2 \times 10^3$  Bq of plutonium per gram of uranium-235, not more than  $9 \times 10^6$  Bq of fission products per gram of uranium-235 and not more than  $5 \times 10^{-3}$  g of uranium-236 per gram of uranium-235.

*Uranium — natural, depleted, enriched:*

*Natural uranium.* Uranium (which may be chemically separated) containing the naturally occurring distribution of uranium isotopes (approximately 99.28 per cent uranium-238, and 0.72 per cent uranium-235 by mass).

*Depleted uranium.* Uranium containing a lesser mass percentage of uranium-235 than in natural uranium.

*Enriched uranium.* Uranium containing a greater mass percentage of uranium-235 than 0.72 per cent. In all cases, a very small mass percentage of uranium-234 is present.

## 7.2 CLASSIFICATION

### 7.2.1 General provisions

7.2.1.1 Radioactive material must be assigned to one of the UN numbers specified in Table 2-11 depending on the activity level of the radionuclides contained in a package, the fissile or non-fissile properties of these radionuclides, the type of package to be presented for transport and the nature or form of the contents of the package, or special arrangements governing the transport operation, in accordance with the provisions laid down in 7.2.2 to 7.2.5.

**Table 2-11. Assignment of UN numbers**

<i>UN number</i>	<i>Name</i>
<i>Excepted packages (1;6.1.5)</i>	
UN 2908	<b>Radioactive material, excepted package — empty packaging</b>
UN 2909	<b>Radioactive material, excepted package — articles manufactured from natural uranium or depleted uranium or natural thorium</b>
UN 2910	<b>Radioactive material, excepted package — limited quantity of material</b>
UN 2911	<b>Radioactive material, excepted package — instruments or articles</b>
<i>Low specific activity radioactive material (7.2.3.1)</i>	
UN 2912	<b>Radioactive material, low specific activity (LSA-I), non-fissile or fissile excepted</b>
UN 3321	<b>Radioactive material, low specific activity (LSA-II), non-fissile or fissile excepted</b>
UN 3322	<b>Radioactive material, low specific activity (LSA-III), non-fissile or fissile excepted</b>
UN 3324	<b>Radioactive material, low specific activity (LSA-II) fissile</b>
UN 3325	<b>Radioactive material, low specific activity (LSA-III) fissile</b>

<i>Surface contaminated objects (7.2.3.2)</i>	
UN 2913	<b>Radioactive material, surface contaminated objects (SCO-I or SCO-II), non-fissile or fissile excepted</b>
UN 3326	<b>Radioactive material, surface contaminated objects (SCO-I or SCO-II), fissile</b>
<i>Type A packages (7.2.4.4)</i>	
UN 2915	<b>Radioactive material, Type A package, non-special form, non-fissile or fissile excepted</b>
UN 3327	<b>Radioactive material, Type A package, fissile, non-special form</b>
UN 3332	<b>Radioactive material, Type A package, special form, non-fissile or fissile excepted</b>
UN 3333	<b>Radioactive material, Type A package, special form, fissile</b>
<i>Type B(U) package (7.2.4.6)</i>	
UN 2916	<b>Radioactive material, Type B(U) package, non-fissile or fissile excepted</b>
UN 3328	<b>Radioactive material, Type B(U) package, fissile</b>
<i>Type B(M) package (7.2.4.6)</i>	
UN 2917	<b>Radioactive material, Type B(M) package, non-fissile or fissile excepted</b>
UN 3329	<b>Radioactive material, Type B(M) package, fissile</b>
<i>Type C package (7.2.4.6)</i>	
UN 3323	<b>Radioactive material, Type C package, non-fissile or fissile excepted</b>
UN 3330	<b>Radioactive material, Type C package, fissile</b>
<i>Special arrangement (7.2.5)</i>	
UN 2919	<b>Radioactive material, transported under special arrangement, non-fissile or fissile excepted</b>
UN 3331	<b>Radioactive material, transported under special arrangement, fissile</b>
<i>Uranium hexafluoride (7.2.4.5)</i>	
UN 2977	<b>Radioactive material, uranium hexafluoride, fissile</b>
UN 2978	<b>Radioactive material, uranium hexafluoride, non-fissile or fissile excepted</b>

## 7.2.2 Determination of activity level

7.2.2.1 The following basic values for individual radionuclides are given in Table 2-12:

- a)  $A_1$  and  $A_2$  in TBq;
- b) activity concentration for exempt material in Bq/g; and
- c) activity limits for exempt consignments in Bq.

7.2.2.2 For individual radionuclides which are not listed in Table 2-12, determination of the basic radionuclide values referred to in 7.2.2.1 requires multilateral approval. It is permissible to use the  $A_2$  value calculated using a dose coefficient for the appropriate lung absorption type as recommended by the International Commission on Radiological Protection, if the chemical forms of each radionuclide under both normal and accident conditions of transport are taken into consideration. Alternatively, the radionuclide values in Table 2-13 may be used without obtaining competent authority approval.

7.2.2.3 In the calculations of  $A_1$  and  $A_2$  for a radionuclide not in Table 2-12, a single radioactive decay chain in which the radionuclides are present in their naturally occurring proportions, and in which no daughter nuclide has a half-life either longer than 10 days or longer than that of the parent nuclide, must be considered as a single radionuclide; and the activity to be taken into account and the  $A_1$  or  $A_2$  value to be applied must be that corresponding to the parent nuclide of that chain. In the case of radioactive decay chains in which any daughter nuclide has a half-life either longer than 10 days or greater than that of the parent nuclide, the parent and such daughter nuclides must be considered as mixtures of different nuclides.

7.2.2.4 For mixtures of radionuclides, the determination of the basic radionuclide values referred to in 7.2.2.1 may be determined as follows:

$$X_m = \frac{1}{\sum_i \frac{f(i)}{X(i)}}$$

where,

f(i) is the fraction of activity or activity concentration of radionuclide i in the mixture;

X(i) is the appropriate value of A<sub>1</sub> or A<sub>2</sub> or the activity concentration for exempt material or the activity limit for an exempt consignment as appropriate for the radionuclide i; and

X<sub>m</sub> is the derived value of A<sub>1</sub> or A<sub>2</sub> or the activity concentration for exempt material or the activity limit for an exempt consignment in the case of a mixture.

7.2.2.5 When the identity of each radionuclide is known but the individual activities of some of the radionuclides are not known, the radionuclides may be grouped and the lowest radionuclide value, as appropriate, for the radionuclides in each group may be used in applying the formulas in 7.2.2.4 and 7.2.4.4. Groups may be based on the total alpha activity and the total beta/gamma activity when these are known, using the lowest radionuclide values for the alpha emitters or beta/gamma emitters, respectively.

7.2.2.6 For individual radionuclides or for mixtures of radionuclides for which relevant data are not available, the values shown in Table 2-13 must be used.

**Table 2-12. Basic radionuclides values for individual radionuclides**

<i>Radionuclide (atomic number)</i>	<i>A<sub>1</sub> (TBq)</i>	<i>A<sub>2</sub> (TBq)</i>	<i>Activity concentration for exempt material (Bq/g)</i>	<i>Activity limit for an exempt consignment (Bq)</i>

Am-243	Np-239

- (c) The quantity may be determined from a measurement of the rate of decay or a measurement of the radiation level at a prescribed distance from the source.
- (d) These values apply only to compounds of uranium that take the chemical form of UF<sub>6</sub>, UO<sub>2</sub>F<sub>2</sub> and UO<sub>2</sub>(NO<sub>3</sub>)<sub>2</sub> in both normal and accident conditions of transport.
- (e) These values apply only to compounds of uranium that take the chemical form of UO<sub>3</sub>, UF<sub>4</sub>, UCl<sub>4</sub> and hexavalent compounds in both normal and accident conditions of transport.
- (f) These values apply to all compounds of uranium other than those specified in (d) and (e) above.
- (g) These values apply to unirradiated uranium only.

**Table 2-13. Basic radionuclide values for unknown radionuclides or mixtures**

<i>Radioactive contents</i>	$A_1$ (Tbq)	$A_2$ (Tbq)	<i>Activity concentration for exempt material (Bq/g)</i>	<i>Activity limit for an exempt consignment (Bq)</i>
Only beta- or gamma-emitting nuclides are known to be present	0.1	0.02	$1 \times 10^1$	$1 \times 10^4$
Alpha-emitting nuclides but no neutron emitters are known to be present	0.2	$9 \times 10^{-5}$	$1 \times 10^{-1}$	$1 \times 10^3$
Neutron-emitting nuclides are known to be present or no relevant data are available	0.001	$9 \times 10^{-5}$	$1 \times 10^{-1}$	$1 \times 10^3$

### 7.2.3 Determination of other material characteristics

#### 7.2.3.1 Low specific activity (LSA) material

##### 7.2.3.1.1 (Reserved)

##### 7.2.3.1.2 LSA material must be in one of three groups:

##### a) LSA-I

- i) uranium and thorium ores and concentrates of such ores, and other ores containing naturally occurring radionuclides which are intended to be processed for the use of these radionuclides;
- ii) natural uranium, depleted uranium, natural thorium, or their compounds or mixtures, providing they are unirradiated and in solid or liquid form;
- iii) radioactive material for which the  $A_2$  value is unlimited, excluding material classified as fissile according to 7.2.3.5; or
- iv) other radioactive material in which the activity is distributed throughout and the estimated average specific activity does not exceed 30 times the values for activity concentration specified in 7.2.2.1 to 7.2.2.6, excluding material classified as fissile according to 7.2.3.5.

##### b) LSA-II

- i) water with tritium concentration up to 0.8 TBq/L; or
- ii) other material in which the activity is distributed throughout and the estimated average specific activity does not exceed  $10^{-4} A_2/g$  for solids and gases, and  $10^{-5} A_2/g$  for liquids.

##### c) LSA-III — solids (e.g. consolidated wastes, activated materials), excluding powders, in which:

- i) the radioactive material is distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, ceramic, etc.);
- ii) the radioactive material is relatively insoluble, or it is intrinsically contained in a relatively insoluble matrix, so that, even under loss of packaging, the loss of radioactive material per package by leaching when placed in water for seven days would not exceed  $0.1 A_2$ ; and
- iii) the estimated average specific activity of the solid, excluding any shielding material, does not exceed  $2 \times 10^{-3} A_2/g$ .

7.2.3.1.3 LSA-III material must be a solid of such a nature that if the entire contents of a package were subjected to the test specified in 7.2.3.1.4, the activity in the water would not exceed  $0.1 A_2$ .

##### 7.2.3.1.4 LSA-III material must be tested as follows:

A solid material sample representing the entire contents of the package must be immersed for 7 days in water at ambient temperature. The volume of water to be used in the test must be sufficient to ensure that at the end of the 7-day test period, the free volume of the unabsorbed and unreacted water remaining must be at least 10 per cent of the volume of the solid

test sample itself. The water must have an initial pH of 6-8 and a maximum conductivity of 1 mS/m at 20°C. The total activity of the free volume of water must be measured following the 7-day immersion of the test sample.

7.2.3.1.5 Demonstration of compliance with the performance standards in 7.2.3.1.4 must be in accordance with 6;7.11.1 and 6;7.11.2.

### 7.2.3.2 *Surface contaminated object (SCO)*

7.2.3.2.1 SCO is classified in one of two groups:

a) SCO-I: A solid object on which:

- i) the non-fixed contamination on the accessible surface averaged over 300 cm<sup>2</sup> (or the area of the surface if less than 300 cm<sup>2</sup>) does not exceed 4 Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 0.4 Bq/cm<sup>2</sup> for all other alpha emitters; and
- ii) the fixed contamination on the accessible surface averaged over 300 cm<sup>2</sup> (or the area of the surface if less than 300 cm<sup>2</sup>) does not exceed 4 × 10<sup>4</sup> Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 4 × 10<sup>3</sup> Bq/cm<sup>2</sup> for all other alpha emitters; and
- iii) the non-fixed contamination plus the fixed contamination on the inaccessible surface averaged over 300 cm<sup>2</sup> (or the area of the surface if less than 300 cm<sup>2</sup>) does not exceed 4 × 10<sup>4</sup> Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 4 × 10<sup>3</sup> Bq/cm<sup>2</sup> for all other alpha emitters;

b) SCO-II: A solid object on which either the fixed or non-fixed contamination on the surface exceeds the applicable limits specified for SCO-I in a) above and on which:

- i) the non-fixed contamination on the accessible surface averaged over 300 cm<sup>2</sup> (or the area of the surface if less than 300 cm<sup>2</sup>) does not exceed 400 Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 40 Bq/cm<sup>2</sup> for all other alpha emitters; and
- ii) the fixed contamination on the accessible surface, averaged over 300 cm<sup>2</sup> (or the area of the surface if less than 300 cm<sup>2</sup>) does not exceed 8 × 10<sup>5</sup> Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 8 × 10<sup>4</sup> Bq/cm<sup>2</sup> for all other alpha emitters; and
- iii) the non-fixed contamination plus the fixed contamination on the inaccessible surface averaged over 300 cm<sup>2</sup> (or the area of the surface if less than 300 cm<sup>2</sup>) does not exceed 8 × 10<sup>5</sup> Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters, or 8 × 10<sup>4</sup> Bq/cm<sup>2</sup> for all other alpha emitters.

### 7.2.3.3 *Special form radioactive material*

7.2.3.3.1 Special form radioactive material must have at least one dimension not less than 5 mm. When a sealed capsule constitutes part of the special form radioactive material, the capsule must be so manufactured that it can be opened only by destroying it. The design for special form radioactive material requires unilateral approval.

7.2.3.3.2 Special form radioactive material must be of such a nature or must be so designed that if it is subjected to the tests specified in 7.2.3.3.4 to 7.2.3.3.8, it must meet the following requirements:

- a) it would not break or shatter under the impact, percussion and bending tests specified in 7.2.3.3.5 a), b), c) or 7.2.3.3.6 a), as applicable;
- b) it would not melt or disperse in the applicable heat test specified in 7.2.3.3.5 d) or 7.2.3.3.6 b), as applicable; and
- c) the activity in the water from the leaching tests specified in 7.2.3.3.7 and 7.2.3.3.8 would not exceed 2 kBq; or alternatively for sealed sources, the leakage rate for the volumetric leakage assessment test specified in ISO 9978:1992 "Radiation Protection — Sealed Radioactive Sources — Leakage Test Methods", would not exceed the applicable acceptance threshold acceptable to the competent authority.

7.2.3.3.3 Demonstration of compliance with the performance standards in 7.2.3.3.2 must be in accordance with 6;7.11.1 and 6;7.11.2.

7.2.3.3.4 Specimens that comprise or simulate special form radioactive material must be subjected to the impact test, the percussion test, the bending test, and the heat test specified in 7.2.3.3.5 or alternative tests as authorized in 7.2.3.3.6. A different specimen may be used for each of the tests. Following each test, a leaching assessment or volumetric leakage test must be performed on the specimen by a method no less sensitive than the methods given in 7.2.3.3.7 for indispersible solid material or 7.2.3.3.8 for encapsulated material.

7.2.3.3.5 The relevant test methods are:

- a) Impact test: The specimen must drop onto the target from a height of 9 m. The target must be as defined in 6;7.13;

- b) Percussion test: The specimen must be placed on a sheet of lead which is supported by a smooth, solid surface and struck by the flat face of a mild steel bar so as to cause an impact equivalent to that resulting from a free drop of 1.4 kg through 1 m. The lower part of the bar must be 25 mm in diameter with the edges rounded off to a radius of  $(3.0 \pm 0.3)$  mm. The lead, of hardness number 3.5 to 4.5 on the Vickers scale and not more than 25 mm thick, must cover an area greater than that covered by the specimen. A fresh surface of lead must be used for each impact. The bar must strike the specimen so as to cause maximum damage.
- c) Bending test: The test must apply only to long, slender sources with both a minimum length of 10 cm and a length to minimum width ratio of not less than 10. The specimen must be rigidly clamped in a horizontal position so that one-half of its length protrudes from the face of the clamp. The orientation of the specimen must be such that the specimen will suffer maximum damage when its free end is struck by the flat face of a steel bar. The bar must strike the specimen so as to cause an impact equivalent to that resulting from a free vertical drop of 1.4 kg through 1 m. The lower part of the bar must be 25 mm in diameter with the edges rounded off to a radius of  $(3.0 \pm 0.3)$  mm.
- d) Heat test: The specimen must be heated in air to a temperature of 800°C and held at that temperature for a period of 10 minutes and must then be allowed to cool.

7.2.3.3.6 Specimens that comprise or simulate radioactive material enclosed in a sealed capsule may be excepted from:

- a) the tests prescribed in 7.2.3.3.5 a) and b) provided the mass of the special form radioactive material is:
  - i) less than 200 g and the specimens are alternatively subjected to the Class 4 impact test prescribed in ISO 2919:1999 "Radiation protection — Sealed radioactive sources — General requirements and classification"; or
  - ii) less than 500 g and the specimens are alternatively subjected to the Class 5 impact test prescribed in ISO 2919:1999 "Radiation protection — Sealed radioactive sources — General requirements and classification; and
- b) the test prescribed in 7.2.3.3.5 d) provided the specimens are alternatively subjected to the Class 6 temperature test specified in ISO 2919:1999 "Radiation protection — Sealed radioactive sources — General requirements and classification".

7.2.3.3.7 For specimens which comprise or simulate indispersible solid material, a leaching assessment must be performed as follows:

- a) The specimen must be immersed for 7 days in water at ambient temperature. The volume of water to be used in the test must be sufficient to ensure that at the end of the 7-day test period, the free volume of the unabsorbed and unreacted water remaining must be at least 10 per cent of the volume of the solid test sample itself. The water must have an initial pH of 6-8 and a maximum conductivity of 1 mS/m at 20°C;
- b) The water with the specimen must then be heated to a temperature of  $(50 \pm 5)$ °C and maintained at this temperature for 4 hours;
- c) The activity of the water must then be determined;
- d) The specimen must then be kept for at least 7 days in still air at not less than 30°C and relative humidity not less than 90 per cent;
- e) The specimen must then be immersed in water of the same specification as in a) above and the water with the specimen heated to  $(50 \pm 5)$ °C and maintained at this temperature for 4 hours;
- f) The activity of the water must then be determined.

7.2.3.3.8 For specimens which comprise or simulate radioactive material enclosed in a sealed capsule, either a leaching assessment or a volumetric leakage assessment must be performed as follows:

- a) The leaching assessment must consist of the following steps:
  - i) the specimen must be immersed in water at ambient temperature. The water must have an initial pH of 6-8 with a maximum conductivity of 1 mS/m at 20°C;
  - ii) the water and specimen must be heated to a temperature of  $(50 \pm 5)$ °C and maintained at this temperature for 4 hours;
  - iii) the activity of the water must then be determined;
  - iv) the specimen must then be kept for at least 7 days in still air at not less than 30°C and relative humidity of not less than 90 per cent;
  - v) the process in i), ii) and iii) must be repeated;
- b) The alternative volumetric leakage assessment must comprise any of the tests prescribed in ISO 9978:1992 "Radiation protection — Sealed radioactive sources — Leakage test methods", which are acceptable to the competent authority.

#### 7.2.3.4 Low dispersible radioactive material

7.2.3.4.1 The design for low dispersible radioactive material requires multilateral approval. Low dispersible radioactive material must be such that the total amount of this radioactive material in a package must meet the following requirements:

- The radiation level at 3 m from the unshielded radioactive material does not exceed 10 mSv/h;
- If subjected to the tests specified in 6;7.19.3 and 6;7.19.4, the airborne release in gaseous and particulate forms of up to 100 µm aerodynamic equivalent diameter would not exceed 100 A<sub>2</sub>. A separate specimen may be used for each test; and
- If subjected to the test specified in 7.2.3.1.4, the activity in the water would not exceed 100 A<sub>2</sub>. In the application of this test, the damaging effects of the tests specified in b) above must be taken into account.

7.2.3.4.2 Low dispersible material must be tested as follows:

A specimen that comprises or simulates low dispersible radioactive material must be subjected to the enhanced thermal test specified in 6;7.19.3 and the impact test specified in 6;7.19.4. A different specimen may be used for each of the tests. Following each test, the specimen must be subjected to the leach test specified in 7.2.3.1.4. After each test, it must be determined if the applicable requirements of 7.2.3.4.1 have been met.

7.2.3.4.3 Demonstration of compliance with the performance standards in 7.2.3.4.1 and 7.2.3.4.2 must be in accordance with 6;7.11.1 and 6;7.11.2.

#### 7.2.3.5 Fissile material

7.2.3.5.1 Packages containing fissile radionuclides must be classified under the relevant entry of Table 2-11 for fissile material unless one of the conditions a) to d) of this paragraph is met. Only one type of exception is allowed per consignment.

- A mass limit per consignment such that:

$$\frac{\text{mass of uranium - 235(g)}}{X} + \frac{\text{mass of other fissile material (g)}}{Y} < 1$$

where X and Y are the mass limits defined in Table 2-14, provided that the smallest external dimension of each package is not less than 10 cm and that either:

- each individual package contains not more than 15 g of fissile material; for unpackaged material, this quantity limitation must apply to the consignment being carried in or on the conveyance;
- the fissile material is a homogeneous hydrogenous solution or mixture where the ratio of fissile nuclides to hydrogen is less than 5 per cent by mass; or
- there are not more than 5 g of fissile material in any 10 L volume of material.

**Table 2-14. Consignment mass limits for exceptions from the requirements for packages containing fissile material**

<i>Fissile material</i>	<i>Fissile material mass (g) mixed with substances having an average hydrogen density less than or equal to water</i>	<i>Fissile material mass (g) mixed with substances having an average hydrogen density greater than water</i>
Uranium 235 (X)	400	290
Other fissile material (Y)	250	180

Neither beryllium nor deuterium must be present in quantities exceeding 1 per cent of the applicable consignment mass limits provided in Table 2-14, except for deuterium in natural concentration in hydrogen.

- Uranium enriched in uranium-235 to a maximum of 1 per cent by mass, and with a total plutonium and uranium-233 content not exceeding 1 per cent of the mass of uranium-235, provided that the fissile material is distributed essentially homogeneously throughout the material. In addition, if uranium-235 is present in metallic, oxide or carbide forms, it must not form a lattice arrangement;
- Liquid solutions of uranyl nitrate enriched in uranium-235 to a maximum of 2 per cent by mass, with a total plutonium and uranium-233 content not exceeding 0.002 per cent of the mass of uranium, and with a minimum nitrogen to uranium atomic ratio (N/U) of 2;

- d) Packages containing, individually, a total plutonium mass not more than 1 kg, of which not more than 20 per cent by mass may consist of plutonium-239, plutonium-241 or any combination of those radionuclides.

#### 7.2.4 Classification of packages

7.2.4.1 The quantity of radioactive material in a package must not exceed the relevant limits for the package type as specified below.

##### 7.2.4.1.1 Classification as excepted packages

7.2.4.1.1.1 Packages may be classified as excepted packages if:

- a) they are empty packagings having contained radioactive material;
- b) they contain instruments or articles in limited quantities;
- c) they contain articles manufactured of natural uranium, depleted uranium or natural thorium; or
- d) they contain radioactive material in limited quantities.

7.2.4.1.1.2 A package containing radioactive material may be classified as an excepted package provided that the radiation level at any point on its external surface does not exceed 5  $\mu\text{Sv/h}$ .

7.2.4.1.1.3 Radioactive material which is enclosed in or is included as a component part of an instrument or other manufactured article may be classified under UN 2911 — **Radioactive material, excepted package — instruments or articles**, provided that:

- a) the radiation level at 10 cm from any point on the external surface of any unpackaged instrument or article is not greater than 0.1 mSv/h; and
- b) each instrument or article bears the marking "RADIOACTIVE" except:
  - i) radioluminescent time-pieces or devices;
  - ii) consumer products that either have received regulatory approval according to 1;6.1.4 b) or do not individually exceed the activity limit for an exempt consignment in Table 2-12 (column 5), provided such products are transported in a package that bears the marking "RADIOACTIVE" on an internal surface in such a manner that warning of the presence of radioactive material is visible on opening the package;
- c) the active material is completely enclosed by non-active components (a device performing the sole function of containing radioactive material must not be considered to be an instrument or manufactured article); and
- d) the limits specified in columns 2 and 3 of Table 2-15 are met for each individual item and each package, respectively.

7.2.4.1.1.4 Radioactive material with an activity not exceeding the limit specified in column 4 of Table 2-15 may be classified under UN 2910 — **Radioactive material, excepted package — limited quantity of material**, provided that:

- a) the package retains its radioactive contents under routine conditions of transport; and
- b) the package bears the marking "RADIOACTIVE" on an internal surface in such a manner that a warning of the presence of radioactive material is visible on opening the package.

7.2.4.1.1.5 An empty packaging which had previously contained radioactive material with an activity not exceeding the limit specified in column 4 of Table 2-15 may be classified under UN 2908 — **Radioactive material, excepted package — empty packaging**, provided that:

- a) it is in a well-maintained condition and securely closed;
- b) the outer surface of any uranium or thorium in its structure is covered with an inactive sheath made of metal or some other substantial material;
- c) the level of internal non-fixed contamination, when averaged over any 300  $\text{cm}^2$ , does not exceed:
  - (i) 400  $\text{Bq/cm}^2$  for beta and gamma emitters and low toxicity alpha emitters; and
  - (ii) 40  $\text{Bq/cm}^2$  for all other alpha emitters; and
- d) any labels which may have been displayed on it in conformity with 5;3.2.6 are no longer visible.

7.2.4.1.2 Articles manufactured of natural uranium, depleted uranium or natural thorium and articles in which the sole radioactive material is unirradiated natural uranium, unirradiated depleted uranium or unirradiated natural thorium may be classified under UN 2909, **Radioactive material, excepted package — articles manufactured from natural uranium or depleted uranium or natural thorium**, provided that the outer surface of the uranium or thorium is enclosed in an inactive sheath made of metal or some other substantial material.

**Table 2-15. Activity limits for excepted packages**

<i>Physical state of contents</i>	<i>Instruments or article</i>		<i>Materials</i>
	<i>Item limits*</i>	<i>Package limits*</i>	<i>Package limits*</i>
<b>Solids</b>			
Special form	$10^{-2} A_1$	$A_1$	$10^{-3} A_1$
Other form	$10^{-2} A_2$	$A_2$	$10^{-3} A_2$
<b>Liquids</b>	$10^{-3} A_2$	$10^{-1} A_2$	$10^{-4} A_2$
<b>Gases</b>			
Tritium	$2 \times 10^{-2} A_2$	$2 \times 10^{-1} A_2$	$2 \times 10^{-2} A_2$
Special form	$10^{-3} A_1$	$10^{-2} A_1$	$10^{-3} A_1$
Other forms	$10^{-3} A_2$	$10^{-2} A_2$	$10^{-3} A_2$

\* For mixtures of radionuclides, see 7.2.2.4 to 7.2.2.6.

#### 7.2.4.2 Classification as low specific activity (LSA) material

7.2.4.2.1 Radioactive material may only be classified as LSA material if the conditions of 7.2.3.1 and 4;9.2.1 are met.

#### 7.2.4.3 Classification as surface contaminated object (SCO)

7.2.4.3.1 Radioactive material may be classified as SCO if the conditions of 7.2.3.2.1 and 4;9.2.1 are met.

#### 7.2.4.4 Classification of Type A packages

7.2.4.4.1 Packages containing radioactive material may be classified as Type A packages provided that the following conditions are met:

7.2.4.4.1.1 Type A packages must not contain activities greater than the following:

- for special form radioactive material —  $A_1$ ; or
- for all other radioactive material —  $A_2$ .

7.2.4.4.1.2 For mixtures of radionuclides whose identities and respective activities are known, the following condition must apply to the radioactive contents of a Type A package:

$$\sum_i \frac{B(i)}{A_1(i)} + \sum_j \frac{C(j)}{A_2(j)} \leq 1$$

where

B(i) is the activity of radionuclide i as special form radioactive material;

$A_1(i)$  is the  $A_1$  value for radionuclide i;

C(j) is the activity of radionuclide j as other than special form radioactive material;

$A_2(j)$  is the  $A_2$  value for radio-nuclide j.

#### 7.2.4.5 Classification of uranium hexafluoride

7.2.4.5.1 Uranium hexafluoride must only be assigned to UN 2977 — **Radioactive material, uranium hexafluoride, fissile** or UN 2978 — **Radioactive material, uranium hexafluoride, non-fissile or fissile excepted**.

7.2.4.5.2 Packages containing uranium hexafluoride must not contain:

- a) a mass of uranium hexafluoride different from that authorized for the package design;
- b) a mass of uranium hexafluoride greater than a value that would lead to an ullage smaller than 5 per cent at the maximum temperature of the package as specified for the plant systems where the package will be used; or
- c) uranium hexafluoride other than in solid form or at an internal pressure above atmospheric pressure when presented for transport.

7.2.4.6 *Classification as Type B(U), Type B(M) or Type C packages*

7.2.4.6.1 Packages not otherwise classified in 7.2.4 (7.2.4.1.1 to 7.2.4.5) must be classified in accordance with the competent authority approval certificate for the package issued by the country of origin of design.

7.2.4.6.2 A package may only be classified as a Type B(U) package if it does not contain:

- a) activities greater than those authorized for the package design;
- b) radionuclides different from those authorized for the package design; or
- c) contents in a form or a physical or chemical state different from those authorized for the package design;

as specified in their certificates of approval.

7.2.4.6.3 A package may only be classified as a Type B(M) package if it does not contain:

- a) activities greater than those authorized for the package design;
- b) radionuclides different from those authorized for the package design; or
- c) contents in a form or a physical or chemical state different from those authorized for the package design;

as specified in their certificates of approval.

7.2.4.6.4 A package may only be classified as a Type C package if it does not contain:

- a) activities greater than those authorized for the package design;
- b) radionuclides different from those authorized for the package design; or
- c) contents in a form or physical or chemical state different from those authorized for the package design;

as specified in their certificates of approval.

### 7.2.5 Special arrangements

Radioactive material must be classified as transported under special arrangement when it is intended to be transported in accordance with 1;6.4.

## Chapter 8

### CLASS 8 — CORROSIVE SUBSTANCES

#### 8.1 DEFINITION OF CLASS 8

Class 8 substances (corrosive substances) are substances which, by chemical action, will cause severe damage when in contact with living tissue or, in the case of leakage, will materially damage, or even destroy, other goods or the means of transport.

#### 8.2 ASSIGNMENT OF PACKING GROUPS

8.2.1 Substances and preparations of Class 8 are divided among the three packing groups according to their degree of hazard in transport as follows:

- a) Packing Group I: Very dangerous substances and preparations;
- b) Packing Group II : Substances and preparations presenting medium danger;
- c) Packing Group III: Substances and preparations presenting minor danger.

8.2.2 Allocation of substances in Class 8 to the packing groups referred to in the introduction to Part 3, Chapter 1 has been on the basis of experience, taking into account such additional factors as inhalation risk and reactivity with water, including the formation of hazardous decomposition products. New substances, including mixtures, can be assigned to packing groups on the basis of the length of time of contact necessary to produce full thickness destruction of human skin. Liquids, and solids which may become liquid during transport, which are judged not to cause full thickness destruction of human skin must still be considered for their potential to cause corrosion to certain metal surfaces in accordance with the criteria in 8.2.5 c) ii).

8.2.3 A substance or preparation meeting the criteria of Class 8 having an inhalation toxicity of dusts and mists (LC<sub>50</sub>) in the range of Packing Group I, but toxicity through oral ingestion or dermal contact only in the range of Packing Group III or less, must be allocated to Class 8.

8.2.4 In assigning the packing group to a substance in accordance with 8.2.2, account must be taken of human experience in instances of accidental exposure. In the absence of human experience, the packing group must be based on data obtained from experiments in accordance with OECD Guidelines for Testing of Chemicals No. 404, *Acute Dermal Irritation/Corrosion*, 1992.

8.2.5 Packing groups are assigned to corrosive substances in accordance with the following criteria:

- a) *Packing Group I* is assigned to substances that cause full thickness destruction of intact skin tissue within an observation period of up to 60 minutes starting after an exposure time of 3 minutes or less.
- b) *Packing Group II* is assigned to substances that cause full thickness destruction of intact skin tissue within an observation period of up to 14 days starting after an exposure time of more than 3 minutes but not more than 60 minutes.
- c) *Packing Group III* is assigned to substances that:
  - i) cause full thickness destruction of intact skin tissue within an observation period of up to 14 days starting after an exposure time of more than 60 minutes but not more than 4 hours;
  - ii) are judged not to cause full thickness destruction of intact skin tissue but which exhibit a corrosion rate on either steel or aluminium surfaces exceeding 6.25 mm a year at a test temperature of 55°C when tested on both materials. For the purposes of testing steel, type S235JR+CR (1.0037 resp. St 37-2), S275J2G3+CR (1.0144 resp. St 44-3), ISO 3574, Unified Numbering System (UNS) G10200 or SAE 1020, and for testing aluminium, non-clad types 7075-T6 or AZ5GU-T6, must be used. An acceptable test is prescribed in the UN *Manual of Tests and Criteria*, Part III, Section 37.

+ *Note.— Where an initial test on either steel or aluminium indicates the substance being tested is corrosive, the follow up test on the other metal is not required.*

## Chapter 9

### CLASS 9 — MISCELLANEOUS DANGEROUS SUBSTANCES AND ARTICLES

#### 9.1 DEFINITION

9.1.1 *Class 9 substances and articles (miscellaneous dangerous substances and articles)* are substances and articles which, during air transport, present a danger not covered by other classes.

9.1.2 *Genetically modified micro-organisms (GMMOs) and genetically modified organisms (GMOs)* are micro-organisms and organisms in which genetic material has been purposely altered through genetic engineering in a way that does not occur naturally.

#### 9.2 ASSIGNMENT TO CLASS 9

9.2.1 Class 9 includes, inter alia:

- ≠ a) Environmentally hazardous substances (aquatic environment) are those that meet the criteria in 2.9.3 of the UN Model Regulations or that meet criteria in international regulations or national regulations established by the national authority in a country of origin, transit or destination.

Substances or mixtures dangerous to the aquatic environment not otherwise classified under these Instructions, but classified by the shipper as dangerous goods (see Special Provision A97), must be assigned to Packing Group III and designated:

UN 3077 Environmentally hazardous substance, solid, n.o.s.; or  
UN 3082 Environmentally hazardous substance, liquid, n.o.s.

- b) Elevated temperature substances (i.e. substances that are transported or offered for transport at temperatures equal to or exceeding 100°C in a liquid state or at temperatures equal to or exceeding 240°C in a solid state (these substances may only be carried under 1;1.1).
- c) GMMOs or GMOs which do not meet the definition of infectious substances (see 6.3) but which are capable of altering animals, plants or microbiological substances in a way not normally the result of natural reproduction. They must be assigned to UN 3245. GMMOs or GMOs are not subject to these Instructions when authorized for use by the appropriate national authorities of the States of Origin, transit and destination.
- d) Magnetized material: Any material which, when packed for air transport, has a magnetic field strength of 0.159 A/m or more at a distance of 2.1 m from any point on the surface of the assembled package (see also Packing Instruction 902).

*Note.— Masses of ferro-magnetic metals such as automobiles, automobile parts, metal fencing, piping and metal construction material, even if not meeting the definition of magnetized material may be subject to the operator's special stowage requirements since they may affect aircraft instruments, particularly the compasses. Additionally, packages or items of material which individually do not meet the definition of magnetized material but cumulatively may do so, may also be subject to the operator's special stowage requirements.*

- e) Aviation regulated solid or liquid: Any material which has narcotic, noxious or other properties such that, in the event of spillage or leakage on an aircraft, extreme annoyance or discomfort could be caused to crew members so as to prevent the correct performance of assigned duties.

Some examples of articles in Class 9 are:

- Engines, internal combustion;
- Life-saving appliances, self-inflating;
- Battery-powered equipment or vehicle.

Some examples of substances in Class 9 are:

- Blue, brown or white asbestos;
- Carbon dioxide, solid (dry ice);
- > — Zinc dithionite.

**Part 3**

**DANGEROUS GOODS LIST,  
SPECIAL PROVISIONS AND  
LIMITED AND EXCEPTED QUANTITIES**

## Chapter 1

### GENERAL

*Parts of this Chapter are affected by State Variations US 3, US 7, ZA 1;  
see Table A-1*

#### 1.1 GENERAL

1.1.1 The Dangerous Goods List (Table 3-1) in this Chapter lists the dangerous goods most commonly carried but is not exhaustive. It is intended that the list cover, as far as practicable, all dangerous substances of commercial importance.

1.1.2 Where an article or substance is specifically listed by name in the Dangerous Goods List, it must be transported in accordance with the provisions in the List which are appropriate for that article or substance. A "generic" or "not otherwise specified" entry may be used to permit the transport of substances or articles which do not appear specifically by name in the Dangerous Goods List. Such a substance or article may be transported only after its dangerous properties have been determined. The substance or article must then be classified according to the class definitions and test criteria and the name in the Dangerous Goods List which most appropriately describes the substance must be used. The classification must be made by the appropriate national authority when so required or may otherwise be made by the shipper. Once the class of the substance or article has been so established, all conditions for dispatch and transport, as provided in these Instructions must be met. Any substance or article having or suspected of having explosive characteristics must first be considered for inclusion in Class 1.

1.1.3 The List also includes a number of specific articles and substances whose transport by air is forbidden (see Part 1, Chapter 2).

1.1.4 Where precautionary measures are laid down in the Dangerous Goods List in respect of a given substance or article (e.g. that it must be "stabilized" or "with x% water or phlegmatizer") such substance or article may not normally be carried when these measures have not been taken, unless the item in question is listed elsewhere (e.g. Class 1) without any indication of, or with different, precautionary measures.

1.1.5 Where there is any doubt as to whether a non-listed article or substance is permitted for transport by air, or under what conditions, the shipper and/or operator must consult an appropriate specialized agency.

#### 1.2 PROPER SHIPPING NAME

*Note.— For proper shipping names used for the transport of samples, see Part 2, Introductory Chapter, paragraph 5.*

1.2.1 The proper shipping name is that portion of the entry most accurately describing the goods in the Dangerous Goods List, which is shown in boldface characters (plus any numbers, Greek letters, "sec", "tert", and the letters m, n, o, p, which form an integral part of the name). Portions of an entry appearing in lightface type need not be considered as part of the proper shipping name but may be used.

1.2.2 Proper shipping names may be used in the singular or plural as appropriate. In addition, when qualifying words are used as part of the proper shipping name, their sequence on documentation or package markings is optional. For instance, "**Dimethylamine solution**" may alternatively be shown as "**Solution of Dimethylamine**". However, the entry in column 1 reflects the preferred sequence. Alternative spelling reflecting common usage around the world is acceptable for words such as "**caesium**" for "**cesium**", "**sulfur**" for "**sulphur**", "**aluminum**" for "**aluminium**", etc. However, the spelling appearing in Table 3-1 is preferred.

≠ 1.2.3 Many substances have an entry for both the liquid and solid state (see definitions for liquid and solid in 1;3.1.1) or for the solid and solution. These are allocated separate UN numbers.

1.2.4 Unless it is already included in bold letters in the name indicated in the Dangerous Goods List, the qualifying word "**molten**" must be added as part of the proper shipping name when a substance, which is a solid in accordance with the definition in 1;3.1, is offered for transport in the molten state (e.g. **Alkylphenol, solid, n.o.s., molten**).

1.2.5 Except for self-reactive substances and organic peroxides and unless it is already included in boldface characters in the name indicated in column 1 of the Dangerous Goods List, the word "**stabilized**" must be added as part of the proper shipping name of a substance which without stabilization would be forbidden from transport in accordance with 1;2.1 due to it being liable to react dangerously under conditions normally encountered in transport (e.g. "**Toxic liquid, organic, n.o.s., stabilized**").

1.2.6 Hydrates may be transported under the proper shipping name for the anhydrous substance.

### 1.2.7 Generic or “not otherwise specified” (n.o.s.) names

1.2.7.1 Generic and “not otherwise specified” proper shipping names, indicated by the inclusion of an asterisk in column 1 of the Dangerous Goods List, must be supplemented with the technical or chemical group names unless a national law or international convention prohibits their disclosure if it is a controlled substance. For explosives of Class 1, the dangerous goods description may be supplemented by additional descriptive text to indicate commercial or military names. Technical and chemical group names must be entered in brackets immediately following the proper shipping name. An appropriate modifier, such as “contains” or “containing” or other qualifying words such as “mixture”, “solution”, etc. and the percentage of the technical constituent may be used. For example: “UN 1993 **Flammable liquid, n.o.s.** (contains xylene and benzene), 3, PG II”.

1.2.7.1.1 The technical name must be a recognized chemical or other name currently used in scientific and technical handbooks, journals and texts. Trade names must not be used for this purpose. In the case of pesticides, only ISO common name(s), other name(s) in the World Health Organization (WHO) *Recommended Classification of Pesticides by Hazard and Guidelines to Classification*, or the name(s) of the active substance(s) may be used.

1.2.7.1.2 When a mixture of dangerous goods is described by one of the “n.o.s.” or “generic” entries where an asterisk is indicated in column 1 of the Dangerous Goods List, not more than the two constituents which most predominantly contribute to the hazard or hazards of a mixture need to be shown, excluding controlled substances when their disclosure is prohibited by national law or international convention. If a package containing a mixture is labelled with any subsidiary risk label, one of the two technical names as shown in parentheses must be the name of the constituent which compels the use of the subsidiary risk label.

Examples illustrating the selection of the proper shipping name supplemented with the technical name of the dangerous goods for such n.o.s. entries are:

UN 3394 **Organometallic substance, liquid, pyrophoric, water-reactive** (Trimethylgallium)  
UN 2902 **Pesticide, liquid, toxic, n.o.s.** (Drazoxolon).

*Note.* — As an aid to choosing the most appropriate n.o.s. or generic name, all the n.o.s. entries and the main generic entries of Table 3-1 are listed in Attachment 1, Chapter 2.

## 1.3 MIXTURES AND SOLUTIONS CONTAINING ONE DANGEROUS SUBSTANCE

1.3.1 A mixture or solution containing a dangerous substance identified by name in the Dangerous Goods List and one or more substances not subject to these Instructions must be treated according to the requirements for the dangerous substance provided that the packaging is appropriate to the physical state of the mixture or solution, unless:

- a) the mixture or solution is specifically identified by name in these Instructions; or
- b) the entry in these Instructions specifically indicates that it applies only to the pure substance; or
- c) the hazard class, physical state or packing group of the solution or mixture is different from that of the dangerous substance; or
- d) there is significant change in the measures to be taken in emergencies.

1.3.2 For solutions and mixtures treated according to the provisions given for the dangerous substance, the qualifying word “**solution**” or “**mixture**”, as appropriate, must be added as part of the proper shipping name, e.g. “**Acetone solution**”. In addition, the concentration of the solution or mixture may also be indicated, e.g. “**Acetone 75% solution**”.

1.3.3 A mixture or solution containing one or more substances identified by name in Table 3-1 or classified under an n.o.s. entry and one or more substances not subject to these Instructions is not subject to these Instructions if the hazard characteristics of the mixture or solution are such that they do not meet the criteria (including human experience criteria) for any class.

## 1.4 MIXTURES AND SOLUTIONS CONTAINING TWO OR MORE DANGEROUS GOODS

1.4.1 (Reserved)

*Note.* — Classification of mixtures or solutions containing two or more dangerous goods should be based on the properties of the mixture or solution, not the individual substances. In some instances, it may be appropriate to select the UN number of a substance specifically listed by name in Table 3-1. For example, it may be more appropriate for mixtures or solutions containing a substance specifically listed by name in Table 3-1 and traces or small quantities of one or more other dangerous goods to be assigned the UN number and proper shipping name of the predominant substance.

## Chapter 2

### ARRANGEMENT OF THE DANGEROUS GOODS LIST (TABLE 3-1)

*Parts of this Chapter are affected by State Variations AU 1, AU 2, AU 3, BE 3, CA 7, CA 8, CA 10, CA 11, CA 13, GB 3, IR 3, JP 21, NL 1, US 2, US 3, US 6, US 15, ZA 1; see Table A-1*

#### 2.1 ARRANGEMENT OF THE DANGEROUS GOODS LIST (TABLE 3-1)

≠ 2.1.1 The Dangerous Goods List (Table 3-1) is divided into 13 columns as follows:

- ≠ Column 1 “Name” — this column contains the alphabetically arranged list of dangerous goods, identified by their proper shipping names in boldface characters (see 1.2). Also included, in lightface type, are:
- other names by which certain articles and substances may be known; in such cases a cross reference to the proper shipping name is given;
  - names of articles and substances which are forbidden for carriage by air under any circumstances; and
  - names of articles and substances which are subject to additional considerations under special provisions.

An explanation of some of the terms used appears in Attachment 2.

Entries in this column have been arranged in alphabetical order; where names comprise more than one word, they have been alphabetized as if they were a single word. In deciding the correct order, numbers and the terms n.o.s., alpha-, beta-, meta-, omega-, sec-, tert-, a-, b-, m-, N-, n-, O-, o- and p- have been ignored. Similarly, the word “see” and any words following it have been ignored.

Unless otherwise indicated, for an entry in the dangerous goods list, the word “solution” in a proper shipping name means one or more named dangerous goods dissolved in a liquid that is not otherwise subject to these Instructions.

- Column 2 “UN No.” — this column contains the serial number assigned to the article or substance under the United Nations classification system. Some entries in the list have not been assigned such a number and for these, a temporary identification number (ID) in the 8000 series has been allocated and is indicated where appropriate. Numbers in the 8000 series must be identified with the “ID” prefix instead of the “UN” prefix used when identifying all other numbers for marking and documentation in these Technical Instructions. When the word “Forbidden” appears across this column and column 3, it means that the dangerous goods covered by that particular entry meet the description of dangerous goods forbidden on aircraft under any circumstances, as provided in 1;2.1. It must be noted, however, that all dangerous goods meeting this description have not been included in the Dangerous Goods List.
- Column 3 “Class or division” — this column contains the class or division and in the case of Class 1, the compatibility group assigned to the article or substance according to the classification system described in Part 2; Introductory Chapter.
- Column 4 “Subsidiary risk” — this column contains the class or division number of any important subsidiary risks which have been identified by applying the classification found in Part 2; Chapters 1 to 9. Requirements for the labelling of dangerous goods which have subsidiary risks are given in 5;3.2.
- Column 5 “Labels” — this column specifies the class hazard label followed by the subsidiary risk label(s) (after the symbol “&”) to be applied to each outside packaging and overpack. Subsidiary risk labels are not shown for all n.o.s. or generic articles and substances which possess more than one hazard. When such an article or substance has more than one hazard and no subsidiary risk label is indicated in column 5 of Table 3-1, subsidiary risk labels must be applied in accordance with 5;3.2.2 and 5;3.2.3. For magnetized material the required handling label is also shown. In the instances where no label is required the word “None” will appear.
- Column 6 “State variations” — this column contains references to entries in Attachment 3, which shows State variations from these Instructions (these appear under the designator and name of the State).

- Column 7 “Special provisions” — this column contains a number referring to the appropriate entries in Table 3-2. Special provisions apply to all the packing groups permitted for a particular substance or article unless the wording makes it otherwise apparent.
- Column 8 “UN packing group” — this column contains the UN packing group number (i.e. I, II or III) assigned to the article or substance. If more than one packing group is indicated for the entry, the packing group of the substance or formulation to be transported should be determined, based on its properties, through application of the hazard grouping criteria as provided in Chapters 1 to 10 of this part.
- + Column 9 “Excepted Quantities” — this provides an alphanumeric code described in 5.1.2 which indicates the maximum quantity per inner and outer packaging for transporting dangerous goods as excepted quantities in accordance with Part 3, Chapter 5.
- Column 10 “Passenger aircraft — Packing instruction” — this column refers to the relevant packing instructions listed in Part 4 for transport of the article or substance on a passenger aircraft. For some entries an alternative packing instruction is shown prefixed with the letter “Y”. Such packing instructions are for limited quantities of dangerous goods.
- Column 11 “Passenger aircraft — Maximum net quantity per package” — this column shows the maximum net quantity (mass or volume) of the article or substance allowed in each package for transport on a passenger aircraft. The mass quoted is the net mass unless otherwise indicated by a letter “G”. Where a maximum net quantity appears beside a packing instruction prefixed by the letter “Y”, this indicates it is the maximum net quantity permitted in a packaging containing limited quantities of dangerous goods. The maximum quantity per package may be further limited by the type of packaging used.
- Column 12 “Cargo aircraft — Packing instruction” — this gives information similar to that in column 10, but for articles or substances which may be transported on a cargo aircraft only.
- Column 13 “Cargo aircraft — Maximum net quantity per package” — this gives information similar to that in column 11, but for articles or substances which may be transported on a cargo aircraft only. The mass quoted is the net mass unless otherwise indicated by a letter “G”. The maximum quantity per package may be further limited by the type of packaging used. The maximum net quantities indicated do not apply to transport in portable tanks, as permitted in the Supplement to these Instructions, Part S-4, Chapter 12, with the approval of the appropriate authority of the State of Origin.

*Note 1.— Where an article or substance may not be carried on a passenger aircraft, the word “Forbidden” is written across columns 10 and 11. Where an article or substance may not be carried on any aircraft, the word “Forbidden” is written across columns 12 and 13 as well as across columns 10 and 11.*

*Note 2.— Where an article or substance is packed according to the packing instruction and maximum net quantity per package given in columns 10 and 11, it may also be carried on a cargo aircraft. In such circumstances, the package must not bear the “Cargo aircraft only” label referred to in 5;3.2.11 a).*

2.1.2 The following abbreviations or symbols are used in Table 3-1 and have the meanings shown:

Abbreviation	Column	Meaning
n.o.s.	1	Not otherwise specified
L	11 and 13	Litre(s)
kg	11 and 13	Kilogram(s)
G	11 and 13	Gross mass of package as prepared for transport
*	1	Entry which requires the addition of a technical name according to 1.2.7
†	1	Entry for which there is an explanation in Attachment 2
≠		this symbol indicates changed text
+		this symbol indicates new or relocated text
>		this symbol indicates deleted text

## Chapter 3

### SPECIAL PROVISIONS

*Parts of this Chapter are affected by State Variations AU 2, CA 7, CA 8, GB 3, IR 3, JM 1, NL 1, US 11, ZA 1; see Table A-1*

- ≠ Table 3-2 lists the special provisions referred to in column 7 of Table 3-1 and the information contained in them is additional to that shown for the relevant entry. Where the wording of the special provision is equivalent to that in the UN Model Regulations, the UN special provision number is shown in parentheses.

**Table 3-2. Special provisions**

<i>TIs</i>	<i>UN</i>
A1	This commodity may be transported on passenger aircraft, only with the prior approval of the appropriate authority of the State of Origin under the written conditions established by that authority. The conditions must include the quantity limitations and packing requirements and these must comply with S-3;1.2.2 of the Supplement. A copy of the document of approval, showing the quantity limitations and packing requirements, must accompany the consignment. The commodity may be carried on cargo aircraft in accordance with columns 12 and 13 of Table 3-1. When States, other than the State of Origin, have notified ICAO that they require prior approval of shipments made under this special provision, approval must also be obtained from these States, as appropriate.
A2	This commodity may be transported on passenger aircraft and on cargo aircraft, only with the prior approval of the appropriate authority of the State of Origin under the written conditions established by the authority.  Where States, other than the State of Origin, have notified ICAO that they require prior approval of shipments made under this special provision, approval must also be obtained from the States of transit, overflight and destination and of the State of the Operator, as appropriate.  In each case the conditions must include the quantity limitations and packing requirements and these must comply with S-3;1.2.3 of the Supplement. A copy of the document(s) of approval, showing the quantity limitations and the packing and labelling requirements, must accompany the consignment.
A3	(223) If the chemical or physical properties of a substance covered by this description are such that, when tested, it does not meet the established defining criteria for the class or division listed in column 3, or any other class or division, it is not subject to these Instructions.
A4	Liquids having a vapour inhalation toxicity of Packing Group I are forbidden on both passenger and cargo aircraft.  Liquids having a mist inhalation toxicity of Packing Group I are forbidden on a passenger aircraft. They may be carried on cargo aircraft providing they are packed in accordance with the packing instructions for the Packing Group I substance and the maximum net quantity per package does not exceed 5 L.
A5	Solids having an inhalation toxicity of Packing Group I are forbidden on passenger aircraft. They may be carried on cargo aircraft providing they are packed in accordance with the packing instructions for the Packing Group I substance and the maximum net quantity per package does not exceed 15 kg.
A6	(43) When offered for carriage as pesticides, these substances must be carried under the relevant pesticide entry and in accordance with the relevant pesticide provisions (see 2;6.2.3 and 2;6.2.4).
A7	Not used.
A8	(322) When transported in non-friable tablet form, these goods are assigned to Packing Group III.
A9	Alcoholic beverages containing not more than 70 per cent alcohol by volume, when packed in receptacles of 5 litres or less, are not subject to these Instructions when carried as cargo.
A10	(39) This substance is not subject to these Instructions when it contains less than 30 per cent or not less than 90 per cent silicon.
A11	(305) These substances are not subject to these Instructions when in concentrations of not more than 50 mg/kg.

<i>TIs</i>	<i>UN</i>
≠ A12	(45) Antimony sulphides and oxides which contain not more than 0.5 per cent of arsenic calculated on the total mass are not subject to these Instructions.
A13	(47) Ferricyanides and ferrocyanides are not subject to these Instructions.
A14	The label conforming to Figure 5-14 may be used until 31 December 2010.
A15	(59) These substances are not subject to these Instructions when they contain not more than 50 per cent magnesium.
A16	(62) This substance is not subject to these Instructions when it does not contain more than 4 per cent sodium hydroxide.
A17	These substances must not be classified and transported unless authorized by the appropriate authority of the State of Origin on the basis of results from Series 2 tests and a Series 6(c) test on packages as prepared for transport.
A18	(66) Mercurous chloride and cinnabar are not subject to these Instructions.
A19	(225) Fire extinguishers under this entry may include installed actuating cartridges (cartridges, power device of Division 1.4C or 1.4S), without changing the classification of Division 2.2 provided the total quantity of deflagrating (propellant) explosives does not exceed 3.2 grams per extinguishing unit.
A20	During the course of transport this substance must be protected from direct sunlight and all sources of heat and be placed in an adequately ventilated area. A statement to this effect must be included in the Dangerous Goods Transport Document.
A21	This entry only applies to vehicles and equipment which are powered by wet batteries, sodium batteries or lithium batteries and which are transported with these batteries installed. Examples of such vehicles and equipment are electrically-powered cars, lawn mowers, wheelchairs and other mobility aids. Vehicles that also contain an internal combustion engine must be consigned under the entry Vehicle (flammable gas powered) or Vehicle (flammable liquid powered), as appropriate. Hybrid electric vehicles powered by both an internal combustion engine and wet batteries, sodium batteries or lithium batteries, transported with the battery(ies) installed, must be consigned under the entries UN 3166 <b>Vehicle, flammable gas powered</b> or UN 3166 <b>Vehicle, flammable liquid powered</b> , as appropriate.
A22	The classification of this substance will vary with particle size and packaging, but borderlines have not been experimentally determined. The appropriate classification must be made using the procedure for the classification of explosives.
A23	(325) In the case of non-fissile or fissile excepted uranium hexafluoride, the material must be classified under UN 2978.
A24	The total quantity of explosive substance contained in the shaped charges and the detonating cord must not exceed 10 kg per assembled perforating gun.
A25	(205) This entry must not be used for Pentachlorophenol (UN 3155).
A26	Refrigerating machines include air conditioning units and machines or other appliances which have been designed for the specific purpose of keeping food or other items at low temperature in an internal compartment. Refrigerating machines and refrigerating machine components are considered not subject to these Instructions if containing less than 12 kg of a gas in Division 2.2 or if containing less than 12 L ammonia solution (UN 2672).
A27	(276) This includes any substance which is not covered by any of the other classes but which has narcotic, noxious or other properties such that, in the event of spillage or leakage on an aircraft, extreme annoyance or discomfort could be caused to crew members so as to prevent the correct performance of assigned duties.
A28	(135) The dihydrated sodium salt of dichloroisocyanuric acid is not subject to these Instructions.
A29	(138) p-Bromobenzyl cyanide is not subject to these Instructions.
A30	(273) Maneb and maneb preparations stabilized against self-heating need not be classified in Division 4.2 when it can be demonstrated by testing that a cubic metre of the substance does not self-ignite and that the temperature at the centre of the sample does not exceed 200°C, when the sample is maintained at a temperature of not less than 75°C ± 2°C for a period of 24 hours.

- A31 (141) Products which have undergone sufficient heat treatment so they present no hazard during transport are not subject to these Instructions.
- ≠ A32 Air bag inflators, air bag modules or seat-belt pretensioners installed in conveyances or in completed conveyance components such as steering columns, door panels, seats, etc., which are not capable of inadvertent activation are not subject to these Instructions. The words “not restricted” and the special provision number A32 must be provided on the air waybill when an air waybill is issued.
- A33 (103) Ammonium nitrites and mixtures of an inorganic nitrite with an ammonium salt are prohibited.
- A34 (113) The transport of chemically unstable mixtures is prohibited.
- A35 This substance is not subject to these Instructions when:
- mechanically produced, particle size more than 53 microns; or
  - chemically produced, particle size more than 840 microns.
- A36 The provisions of Special Provision A2 apply to this entry for Packing Group I only and the provisions of Special Provision A1 apply to this entry for Packing Group II only, as applicable.
- A37 This entry is not intended to include Ammonium permanganate, the transport of which is prohibited under any circumstances.
- A38 (207) Polymeric beads and moulding compounds may be made from polystyrene, poly(methyl methacrylate) or other polymeric material.
- A39 This substance possesses some dangerous explosive properties when transported in large volumes.
- A40 (28) This substance may be transported under provisions of Division 4.1 only if it is so packed that the percentage of diluent will not fall below that stated at any time during transport.
- A41 Permeation devices that contain dangerous goods and that are used for calibrating air quality monitoring devices are not subject to these Instructions provided the following requirements are met:
- a) Each device must be constructed of a material compatible with the dangerous goods it contains;
  - b) The total contents of dangerous goods in each device is limited to 2 millilitres and the device must not be liquid full at 55°C;
  - c) Each permeation device must be placed in a sealed, high impact-resistant, tubular inner packaging of plastic or equivalent material. Sufficient absorbent material must be contained in the inner packaging to completely absorb the contents of the device. The closure of the inner packaging must be securely held in place with wire, tape or other positive means;
  - d) Each inner packaging must be contained in a secondary packaging constructed of metal, or plastic having a minimum thickness of 1.5 mm. The secondary packaging must be hermetically sealed;
  - e) The secondary packaging must be securely packed in strong outer packaging. The completed package must be capable of withstanding, without breakage or leakage of any inner packaging and without significant reduction in effectiveness:
    - i) the following free drops onto a rigid, non-resilient, flat and horizontal surface from a height of 1.8 m:
      - one drop flat on the bottom;
      - one drop flat on the top;
      - one drop flat on the long side;
      - one drop flat on the short side;
      - one drop on a corner at the junction of three intersecting edges; and
    - ii) a force applied to the top surface for a duration of 24 hours, equivalent to the total weight of identical packages if stacked to a height of 3 m (including the test sample).
- Note.— Each of the above tests may be performed on different but identical packages.*
- f) The gross mass of the completed package must not exceed 30 kg.
- A42 (249) Ferrocium (lighter flints), stabilized against corrosion, with a minimum iron content of 10 per cent are not subject to these Instructions.

- A43 (210) Toxins from plant, animal or bacterial sources which contain infectious substances, or toxins that are contained in infectious substances, must be classified as Division 6.2.
- ≠ A44 The entry chemical kit or first aid kit is intended to apply to boxes, cases, etc., containing small quantities of one or more compatible items of dangerous goods which are used, for example, for medical, analytical or testing or repair purposes.
- The only dangerous goods which are permitted in the kits are substances which may be transported as:
- excepted quantities as specified in column 9 of Table 3-1, provided the inner packagings and quantities are as prescribed in 5.1.2 and 5.2.1 a); or
  - limited quantities under 3;4.1.2.
- ≠ A45 Not used.
- Note.— See Packing Instructions 965-970.*
- A46 Mixtures of solids which are not subject to these Instructions and flammable liquids may be transported under this entry without first applying the classification criteria of Division 4.1, providing there is no free liquid visible at the time the substance is packaged and the packaging must pass a leakproofness test at the Packing Group II level. Small inner packagings consisting of sealed packets or articles containing less than 10 mL of a Packing Group II or III flammable liquid absorbed into a solid material are not subject to these Instructions provided there is no free liquid in the packet or articles.
- A47 (219) Genetically modified micro-organisms and genetically modified organisms, which meet the definition of an infectious substance and the criteria for inclusion in Division 6.2 in accordance with 2;6, must be transported as UN 2814, UN 2900 or UN 3373, as appropriate.
- A48 Packaging tests are not considered necessary.
- A49 Other inert material or inert material mixture may be used at the discretion of the appropriate authority of the State of Origin, provided this inert material has identical phlegmatizing properties.
- A50 Mixtures of solids which are not subject to these Instructions and toxic liquids may be transported under this entry without first applying the classification criteria of Division 6.1, providing there is no free liquid visible at the time the substance is packaged and the packaging must pass a leakproofness test at the Packing Group II level. This entry must not be used for solids containing a Packing Group I liquid.
- A51 Irrespective of the limit specified in column 11 of Table 3-1, aircraft batteries up to a limit of 100 kg gross mass per package may be transported. Transport in accordance with this special provision must be noted on the dangerous goods transport document.
- A52 (228) Mixtures not meeting the criteria for flammable gases (Division 2.1) must be transported under UN 3163.
- A53 (37) This substance is not subject to these Instructions when coated.
- A54 (32) This substance is not subject to these Instructions when in any other form.
- A55 (142) Solvent extracted soya bean meal containing not more than 1.5 per cent oil and not more than 11 per cent moisture, which is substantially free of flammable solvent, is not subject to these Instructions.
- A56 This entry applies to articles which contain Class 1 explosive substances and which may also contain dangerous goods of other classes. These articles are used as lifesaving vehicle air bag inflators or air bag modules or seat belt pretensioners.
- The quantities given in columns 11 and 13 of Table 3-1 refer to the net mass of the finished article.
- Note.— For the carriage of a vehicle, see Packing Instruction 900.*
- A57 Packagings must be so constructed that explosion is not possible by reason of increased internal pressure.
- A58 (144) An aqueous solution containing not more than 24 per cent alcohol by volume is not subject to these Instructions.
- A59 A tire assembly unserviceable or damaged is not subject to these Instructions if the tire is completely deflated. A tire assembly with a serviceable tire is not subject to these Instructions provided the tire is not inflated to a gauge pressure exceeding the maximum rated pressure for that tire. However, such tires (including valve assemblies) must be protected from damage during transport, which may require the use of a protective cover.

- A60 (215) This entry only applies to the technically pure substance or to formulations derived from it having an SADT higher than 75°C and therefore does not apply to formulations which are self-reactive substances. (For self-reactive substances, see 2;4.2.3. Table 2-6). Homogeneous mixtures containing not more than 35 per cent by mass of azocarbonamide and at least 65 per cent of inert substance are not subject to these Instructions unless criteria of other classes or divisions are met.
- A61 (168) Asbestos which is immersed or fixed in a natural or artificial binder (such as cement, plastics, asphalt, resins or mineral ore) in such a way that no escape of hazardous quantities of respirable asbestos fibres can occur during transport is not subject to these Instructions. Manufactured articles, containing asbestos and not meeting this requirement, are nevertheless not subject to these Instructions, when packed so that no escape of hazardous quantities of respirable asbestos fibres can occur during transport.
- A62 (178) This designation must be used only when no other appropriate designation exists in the list and then only with the approval of the appropriate authority of the State of Origin.
- A63 Not used.
- A64 (306) This entry may only be used for substances that do not exhibit explosive properties of Class 1 when tested in accordance with test series 1 and 2 of Class 1 (see UN *Manual of Tests and Criteria*, Part I).
- A65 (270) Aqueous solutions of Division 5.1 inorganic solid nitrate substances are considered as not meeting the criteria of Division 5.1 if the concentration of the substances in solution at the minimum temperature encountered in transport is not greater than 80 per cent of the saturation limit.
- ≠ A66 Polyester resin kits consist of two components: a base material (Class 3, Packing Group II or III) and an activator (Division 5.2). The organic peroxide must be type D, E or F, not requiring temperature control. Packing Group II or III is assigned according to the criteria for Class 3, applies to the base material.
- ≠ A67 Non-spillable batteries meeting the requirements of Packing Instruction 806 are not subject to these Instructions if, at a temperature of 55°C, the electrolyte will not flow from a ruptured or cracked case. The battery must not contain any free or unabsorbed liquid. Any electrical battery or battery powered device, equipment or vehicle having the potential of dangerous evolution of heat must be prepared for transport so as to prevent:
- a) a short circuit (e.g. in the case of batteries, by the effective insulation of exposed terminals; or, in the case of equipment, by disconnection of the battery and protection of exposed terminals); and
  - b) unintentional activation.
- The words “not restricted” and the special provision number A67 must be provided on the air waybill when an air waybill is issued.
- A68 (272) This substance must not be transported under the provisions of Division 4.1 unless specifically authorized by the appropriate national authority. (See UN 0143.)
- ≠ A69 Articles, each containing not more than 100 mg of mercury, gallium or inert gas and packaged so that the quantity of mercury, gallium or inert gas per package does not exceed 1 g, are not subject to these Instructions when carried as cargo. The words “not restricted” and the special provision number A69 must be provided on the air waybill when an air waybill is issued.
- ≠ A70 Internal combustion engines being shipped either separately or incorporated into a machine or other apparatus, the fuel tank of which has never contained any fuel and the fuel system of which is completely empty of fuel, or that are powered by a fuel that does not meet the classification criteria for any class or division, and without batteries or other dangerous goods, are not subject to these Instructions. The words “not restricted” and the special provision number A70 must be provided on the air waybill when an air waybill is issued.
- A71 (38) This substance is not subject to these Instructions when it contains not more than 0.1 per cent calcium carbide.
- A72 (163) A substance specifically listed by name in Table 3-1 must not be transported under this entry. Materials transported under this entry may contain 20 per cent or less nitrocellulose provided the nitrocellulose contains not more than 12.6 per cent nitrogen.
- A73 (237) The membrane filters, including paper separators, coating, or backing materials, etc., that are present in transport, must not be liable to propagate a detonation as tested by one of the tests described in the UN *Manual of Tests and Criteria*, Part I, Test Series 1(a).

In addition, the appropriate authority may determine, on the basis of the results of suitable burning rate tests taking account of the standard tests in the UN *Manual of Tests and Criteria*, Part III, subsection 33.2.1, that

nitrocellulose membrane filters in the form in which they are to be transported are not subject to the provisions of these Instructions applicable to flammable solids in Division 4.1.

- A74 (169) Phthalic anhydride in the solid state and tetrahydrophthalic anhydrides, with not more than 0.05 per cent maleic anhydride, are not subject to these Instructions. Phthalic anhydride molten at a temperature above its flash point, with not more than 0.05 per cent maleic anhydride, must be classified under UN 3256.
- A75 Articles such as sterilization devices, when containing less than 30 mL per inner packaging with not more than 150 mL per outer packaging, may be transported on passenger and cargo aircraft in accordance with the provisions in 3;5, irrespective of the value in column 9 and the indication of "forbidden" in columns 10 to 13 of the Dangerous Goods List (Table 3-1), provided such packagings were first subjected to comparative fire testing. Comparative fire testing must show no difference in burning rate between a package as prepared for transport (including the substance to be transported) and an identical package filled with water.
- A76 (326) In the case of fissile uranium hexafluoride, the material must be classified under UN 2977.
- A77 Mixtures of solids which are not subject to these Instructions and corrosive liquids may be transported under this entry without first applying the classification criteria of Class 8, providing there is no free liquid visible at the time the substance is packaged and the packaging must pass a leakproofness test at the Packing Group II level.
- A78 Radioactive material with a subsidiary risk must:
- a) be labelled with subsidiary risk labels corresponding to each subsidiary risk exhibited by the material in accordance with the relevant provisions of 5;3.2; corresponding placards must be affixed to transport units in accordance with the relevant provisions of 5;3.6;
  - b) be allocated to Packing Groups I, II or III, as and if appropriate, by application of the grouping criteria provided in Part 2 corresponding to the nature of the predominant subsidiary risk.

The description required in 5;4.1.5.7.1 b) must include a description of these subsidiary risks (e.g. "Subsidiary risk: 3,6.1"), the name of the constituents which most predominantly contribute to this (these) subsidiary risk(s) and, where applicable, the packing group.

Radioactive material with a subsidiary risk of Division 4.2 (Packing Group I) must be transported in Type B packages. Radioactive material with a subsidiary risk of Division 2.1 is forbidden from transport on passenger aircraft, and radioactive material with a subsidiary risk of Division 2.3 is forbidden from transport on passenger or cargo aircraft except with the prior approval of the appropriate authority of the State of Origin under the conditions established by that authority. A copy of the document of approval, showing the quantity limitations and the packaging requirements, must accompany the consignment.

- ≠ A79 (307) This entry may only be used for uniform mixtures containing ammonium nitrate as the main ingredient within the following composition limits:
- a) not less than 90 per cent ammonium nitrate with not more than 0.2 per cent total combustible/organic material calculated as carbon and with added matter, if any, which is inorganic and inert towards ammonium nitrate; or
  - b) less than 90 per cent but more than 70 per cent ammonium nitrate with other inorganic materials or more than 80 per cent but less than 90 per cent ammonium nitrate mixed with calcium carbonate and/or dolomite and/or mineral calcium sulphate and not more than 0.4 per cent total combustible/organic material calculated as carbon; or
  - c) nitrogen type ammonium nitrate based fertilizers containing mixtures of ammonium nitrate and ammonium sulphate with more than 45 per cent but less than 70 per cent ammonium nitrate and not more than 0.4 per cent total combustible/organic material calculated as carbon such that the sum of the percentage composition of ammonium nitrate and ammonium sulphate exceeds 70 per cent.
- A80 (220) The technical name of the flammable liquid component only of this solution or mixture must be shown in parenthesis immediately following the proper shipping name.
- A81 The quantity limits shown in columns 11 and 13 do not apply to body parts, organs or whole bodies.
- A82 (177) Barium sulphate is not subject to these Instructions.

- A83 (208) The commercial grade of calcium nitrate fertilizer, when consisting mainly of a double salt (calcium nitrate and ammonium nitrate) containing not more than 10 per cent ammonium nitrate and at least 12 per cent water of crystallization, is not subject to these Instructions.
- A84 (182) The group of alkali metals includes lithium, sodium, potassium, rubidium and caesium.
- A85 (183) The group of alkaline earth metals includes magnesium, calcium, strontium and barium.
- A86 (241) The formulation must be prepared so that it remains homogeneous and does not separate during transport. Formulations with low nitrocellulose contents are not subject to these Instructions provided that 1) they do not exhibit dangerous properties when tested for their liability to detonate, deflagrate or explode when heated under defined confinement by tests of test series 1(a), 2(b) and 2(c) respectively in the UN *Manual of Tests and Criteria* and 2) they are not flammable solids when tested in accordance with test N1 in the UN *Manual of Tests and Criteria*, Part III, subsection 3.3.2.1.4 (chips, if necessary, crushed and sieved to a particle size of less than 1.25 mm).
- A87 Articles which are not fully enclosed by packaging, crates or other means that prevent ready identification are not subject to the marking requirements of 5;2 or the labelling requirements of 5;3.
- A88 Prototype lithium batteries and cells to be tested that are packed with not more than 24 cells or 12 batteries per packaging that have not been tested to the requirements in subsection 38.3 of the UN *Manual of Tests and Criteria* may be transported aboard cargo aircraft if approved by the appropriate authority of the State of Origin and the following requirements are met:
- a) the cells and batteries must be transported in an outer packaging that is a metal, plastic or plywood drum or a metal, plastic or wooden box and that meets the criteria for Packing Group I packagings; and
  - b) each cell and battery must be individually packed in an inner packaging inside an outer packaging and surrounded by cushioning material that is non-combustible, and non-conductive. Cells and batteries must be protected against short circuiting.
- A89 (186) In determining the ammonium nitrate content, all nitrate ions for which a molecular equivalent of ammonium ions is present in the mixture must be calculated as ammonium nitrate.
- A90 (193) This entry may only be used for uniform ammonium nitrate based fertilizer mixtures of the nitrogen, phosphate or potash type, containing not more than 70 per cent ammonium nitrate and not more than 0.4 per cent total combustible/organic material calculated as carbon or with not more than 45 per cent ammonium nitrate and unrestricted combustible material. Fertilizers within these composition limits are not subject to these Instructions if shown by a Trough Test (see UN *Manual of Tests and Criteria*, Part III, subsection 38.2) not to be liable to self-sustaining decomposition.
- ≠ A91 (198) A nitrocellulose solution containing not more than 20 per cent nitrocellulose may be transported under the requirements for "Paint" or "Printing ink" as applicable; see UN 1210, 1263, 3066, 3469 and 3470.
- ≠ A92 (199) Lead compounds which, when mixed in a ratio of 1:1000 with 0.07 M hydrochloric acid and stirred for 1 hour at a temperature of 23°C ±2°C, exhibit a solubility of 5 per cent or less (see ISO 3711:1990 "*Lead chromate pigments and lead chromate-molybdate pigments — Specifications and methods of test*") are considered insoluble and are not subject to these Instructions unless they meet the criteria for inclusion in another hazard class or division.
- ≠ A93 A heat-producing article is not subject to these Instructions when the heat-producing component or the energy source is removed to prevent unintentional functioning during transport. The words "not restricted" and the special provision number A93 must be provided on the air waybill when an air waybill is issued.
- A94 Batteries or cells containing sodium must not contain dangerous goods other than sodium, sulphur and/or polysulphides. Batteries or cells must not be offered for transport at a temperature such that liquid elemental sodium is present in the battery or cell unless approved and under the conditions established by the appropriate national authority.
- Cells must consist of hermetically sealed metal casings which fully enclose the dangerous goods and which are so constructed and closed as to prevent the release of the dangerous goods under normal conditions of transport.
- Batteries must consist of cells secured within and fully enclosed by a metal casing so constructed and closed as to prevent the release of the dangerous goods under normal conditions of transport.
- A95 (203) This entry is not to be used for Polychlorinated biphenyls (UN 2315).

- A96 (196) Only formulations which in laboratory testing neither detonate in the cavitated state nor deflagrate, which show no effect when heated under confinement and which exhibit no explosive power may be transported under this entry. The formulation must also be thermally stable (i.e. the SADT is 60°C or higher for a 50 kg package). Formulations not meeting these criteria must be transported under the appropriate provisions of Division 5.2.
- ≠ A97 These entries may be used for substances which are hazardous to the environment but do not meet the classification criteria of any other class or other substance within Class 9. This must be based on the criteria as indicated in 2;9.2.1 a). This designation may also be used for wastes not otherwise subject to these Instructions but which are covered under the *Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal*.
- ≠ A98 Aerosols, gas cartridges and receptacles, small, containing gas with a capacity not exceeding 50 ml, containing no constituents subject to these Instructions other than a Division 2.2 gas, are not subject to these Instructions unless their release could cause extreme annoyance or discomfort to crew members so as to prevent the correct performance of assigned duties. The words "not restricted" and the special provision number A98 must be provided on the air waybill when an air waybill is issued.
- A99 Irrespective of the limit specified in column 13 of Table 3-1, a lithium battery or battery assembly that has successfully passed the tests specified in the UN *Manual of Tests and Criteria*, Part III, subsection 38.3, and that meets the requirements of Packing Instruction 903 as prepared for transport may have a mass exceeding 35 kg G, if approved by the appropriate authority of the State of Origin. A copy of the document of approval must accompany the consignment.
- A100 (243) Gasoline, motor spirit and petrol for use in spark-ignition engines (e.g. in automobiles, stationary engines and other engines) must be assigned to this entry regardless of variations in volatility.
- A101 (227) When phlegmatized with water and inorganic inert material, the content of urea nitrate may not exceed 75 per cent by mass and the mixture must not be capable of being detonated by the series 1 type (a) test in the UN *Manual of Tests and Criteria*, Part I.
- A102 (244) This listing includes aluminium dross, aluminium skimmings, spent cathodes, spent potliner and aluminium salt slags.
- A103 Flammable liquefied gases must be contained within refrigerating machine components. These components must be designed and tested to at least three times the working pressure of the machinery. The refrigerating machines must be designed and constructed to contain the liquefied gas and preclude the risk of bursting or cracking of the pressure-retaining components during normal conditions of transport. Refrigerating machines and refrigerating machine components are considered not subject to these Instructions if containing less than 100 g flammable, non-toxic, liquefied gas.
- A104 A toxic subsidiary risk label, although not required by these Instructions, may be applied.
- A105 (242) Sulphur is not subject to these Instructions when it has been formed to a specific shape (e.g. prills, granules, pellets, pastilles or flakes).
- A106 This entry may only be used for samples of chemicals taken for analysis in connection with the implementation of the Chemical Weapons Convention.
- They may be transported on a passenger or cargo aircraft providing prior approval has been granted by the appropriate authority of the State of Origin or the Director General of the Organization for the Prohibition of Chemical Weapons and providing the samples comply with the requirements shown against the entry for chemical samples in Table S-3-1 of the Supplement.
- The substance is assumed to meet the criteria of Packing Group I for Division 6.1. Subsidiary risk labelling is not required.
- A copy of the document of approval showing the quantity limitations and the packing requirements must accompany the consignment.
- Note.— The transport of substances under this description must be in accordance with chain of custody and security procedures specified by the Organization for the Prohibition of Chemical Weapons.*
- A107 This entry only applies to machinery or apparatus containing dangerous goods as a residue or as an integral element of the machinery or apparatus. It must not be used for machinery or apparatus for which a proper shipping name already exists in Table 3-1.
- A108 The provisions of Special Provision A1 apply to this entry for Packing Group I only.

- A109 This commodity may be transported on cargo aircraft, only with the prior approval of the appropriate authority of the State of Origin under the written conditions established by that authority. The conditions must include the quantity limitations and packing requirements and these must comply with S-3;1.2.4 of the Supplement. A copy of the document of approval, showing the quantity limitations and packing requirements, must accompany the consignment.
- Where States, other than the State of Origin, have notified ICAO that they require prior approval of shipments made under this special provision, approval must also be obtained from these States, as appropriate.
- A110 (226) Formulations of these substances containing not less than 30 per cent non-volatile, non-flammable phlegmatizer are not subject to these Instructions.
- A111 Oxygen generators, chemical, that have passed their expiration date, are unserviceable or that have been used are forbidden for transport.
- ≠ A112 Consumer commodities may only include substances of Class 2 (non-toxic aerosols only), Class 3, Packing Group II or III, Division 6.1 (Packing Group III only), UN 3077, UN 3082 and UN 3175, provided such substances do not have a subsidiary risk. Dangerous goods that are forbidden for transport aboard passenger aircraft must not be transported as consumer commodities.
- A113 (279) The substance is assigned to this classification or Packing Group based on human experience rather than the strict application of classification criteria set out in the Instructions.
- A114 (283) Articles, containing gas, intended to function as shock absorbers, including impact energy absorbing devices, or pneumatic springs are not subject to these Instructions provided:
- each article has a gas space capacity not exceeding 1.6 litres and a charge pressure not exceeding 280 bar where the product of the capacity (litres) and charge pressure (bars) does not exceed 80 (i.e. 0.5 litre gas space and 160 bar charge pressure, 1 litre gas space and 80 bar charge pressure, 1.6 litre gas space and 50 bar charge pressure, 0.28 litre gas space and 280 bar charge pressure);
  - each article has a minimum burst pressure of 4 times the charge pressure at 20°C for products not exceeding 0.5 litre gas space capacity and 5 times charge pressure for products greater than 0.5 litre gas space capacity;
  - each article is manufactured from material which will not fragment upon rupture;
  - each article is manufactured in accordance with a quality assurance standard acceptable to the appropriate national authority; and
  - the design type has been subjected to a fire test demonstrating that pressure in the article is relieved by means of a fire-degradable seal or other pressure-relief device such that the article will not fragment and the article does not rocket.
- A115 (280) This entry applies to articles which are used as lifesaving vehicle air bag inflators, or air bag modules or seat belt pretensioners, and which contain dangerous goods of Class 1 or dangerous goods of other classes and when transported as component parts and when these articles as presented for transport have been tested in accordance with test series 6 (c) of Part I of the UN *Manual of Tests and Criteria*, with no explosion of the device, no fragmentation of the device casing or pressure vessel, no projection hazard and no thermal effect which would significantly hinder firefighting or other emergency response efforts in the immediate vicinity.
- A116 An oxygen generator, chemical, when containing an explosive actuating device must only be transported under this entry when excluded from Class 1 in accordance with 2;1.1 b).
- A117 Wastes transported under UN 3291 are wastes derived from the medical treatment of humans or animals or from bio-research, where there is a relatively low probability that infectious substances are present. Waste infectious substances which can be specified must be assigned to UN 2814 or UN 2900. Decontaminated wastes which previously contained infectious substances may be considered as not subject to these Instructions unless the criteria of another class or division are met.
- A118 Items classified as explosive must be removed from vehicles and transported in accordance with the provisions of these Instructions unless authorized by the appropriate national authority under the written conditions established by that authority. In such circumstances, vehicles may be transported on cargo aircraft only.

*Note.— This special provision does not apply where the explosives are a smoke candle installed as a permanent part of the vehicle or are part of an assembly classified as dangerous goods of other than Class 1, e.g. Air bag inflators, Air bag modules and Seat-belt pretensioners (UN 3268), Fire extinguishers (UN 1044). Additionally, this special provision does not apply in the case of Air bag modules and Air bag inflators and Seat-belt pretensioners (UN 0503) installed in the vehicle.*

- A119 Irrespective of the limit specified in column 13 of Table 3-1, a handling device meeting the requirements of Packing Instruction 917 as prepared for transport may have a gross mass not exceeding 1 000 kg.
- A120 This entry includes but is not limited to automobiles, motorcycles, aircraft, boats, snowmobiles, jet skis, etc.
- A121 Not used.
- A122 (286) Nitrocellulose membrane filters covered by this entry, each with a mass not exceeding 0.5 g, are not subject to these Instructions when contained individually in an article or a sealed packet.
- ≠ A123 This entry applies to Batteries, electric storage, not otherwise listed in Table 3-1. Examples of such batteries are: alkali-manganese, zinc-carbon, nickel-metal hydride and nickel-cadmium batteries. Any electrical battery or battery-powered device, equipment or vehicle having the potential of a dangerous evolution of heat must be prepared for transport so as to prevent:
- a) a short circuit (e.g. in the case of batteries, by the effective insulation of exposed terminals; or, in the case of equipment, by disconnection of the battery and protection of exposed terminals); and
  - b) unintentional activation.
- The words “not restricted” and the special provision number A123 must be provided on the air waybill when an air waybill is issued.
- A124 (292) Mixtures containing not more than 23.5 per cent oxygen by volume may be transported under this entry when no other oxidizing gases are present. A Division 5.1 subsidiary risk label is not required for any concentrations within this limit.
- A125 (293) The following definitions apply to matches:
- a) Fusee matches are matches the heads of which are prepared with a friction-sensitive igniter composition and a pyrotechnic composition which burns with little or no flame, but with intense heat;
  - b) Safety matches are combined with or attached to the box, book or card that can be ignited by friction only on a prepared surface;
  - c) Strike anywhere matches are matches that can be ignited by friction on a solid surface;
  - d) Wax Vesta matches are matches that can be ignited by friction either on a prepared surface or on a solid surface.
- A126 Not used.
- A127 Not used.
- A128 (153) This entry only applies if it is demonstrated, on the basis of tests, that the substances, when in contact with water are not combustible nor show a tendency to auto-ignition and that the mixture of gases evolved is not flammable.
- A129 (252) Provided the ammonium nitrate remains in solution under all conditions of transport, aqueous solutions of ammonium nitrate, with not more than 0.2 per cent combustible material, in a concentration not exceeding 80 per cent are not subject to these Instructions.
- A130 When this material meets the definitions and criteria of other classes or divisions as defined in Part 2, it must be classified in accordance with the predominant subsidiary risk. Such material must be declared under the proper shipping name and UN number appropriate for the material in that predominant Class or division, with the addition of the name applicable to this radioactive material according to column 1 of the Dangerous Goods List, and must be transported in accordance with the provisions applicable to that UN number. In addition, all other requirements specified in 1;6.1.5 must apply.
- A131 Sterilization devices, when containing less than 30 mL per inner packaging with not more than 300 mL per outer packaging, may be transported on passenger and cargo aircraft in accordance with the provisions in 3;5, irrespective of the value in column 9 and the indication of “Forbidden” in columns 10 to 13 of the Dangerous Goods List (Table 3-1). In addition, after filling, each inner packaging must be determined to be leak-tight by placing the inner packaging in a hot water bath at a temperature, and for a period of time, sufficient to ensure that an internal pressure equal to the vapour pressure of ethylene oxide at 55°C is achieved. Any inner packaging showing evidence of leakage, distortion or other defect under this test may not be transported under the terms of this special provision. In addition to the packaging required by 3;5, inner packagings must be placed in a sealed plastics bag compatible with ethylene oxide and capable of containing the contents in the event of breakage or leakage of the inner packaging. Glass inner packagings must be placed within a protective shield capable of preventing the glass from puncturing the plastics bag in the event of damage to the packaging (e.g. crushing).

- A132 (204) Articles containing smoke-producing substance(s) corrosive according to the criteria for Class 8 must be labelled with a “Corrosive” subsidiary risk label.
- A133 Substances must not be transported under this entry unless approved by the appropriate national authority on the basis of the results of appropriate tests according to Part I of the UN *Manual of Tests and Criteria*. Packaging must ensure that the percentage of diluent does not fall below that stated in the appropriate authority approval at any time during transport.
- A134 (312) Vehicles which contain an internal combustion engine must be consigned under the entries UN 3166 **Vehicle, flammable gas powered** or UN 3166 **Vehicle, flammable liquid powered**, as appropriate. These entries include hybrid electric vehicles powered by both an internal combustion engine and wet batteries, sodium batteries or lithium batteries, transported with the battery(ies) installed.
- A135 (313) Substances and mixtures meeting the criteria for Class 8 must be labelled with a “Corrosive” subsidiary risk label.
- A136 (314) a) These substances are liable to exothermic decomposition at elevated temperatures. Decomposition can be initiated by heat or by impurities (e.g. powdered metals (iron, manganese, cobalt, magnesium) and their compounds).
- b) During the course of transport, these substances must be shaded from direct sunlight and all sources of heat and be placed in adequately ventilated areas.
- A137 (315) This entry must not be used for Division 6.1 substances that meet the inhalation toxicity criteria for Packing Group I described in 2;6.2.2.4.3.
- A138 (316) This entry applies only to calcium hypochlorite, dry, when transported in non-friable tablet form.
- A139 (317) “Fissile-excepted” applies only to those packages complying with 6;7.10.2.
- A140 (318) For the purposes of documentation, the proper shipping name must be supplemented with the technical name (see 1.2.7). Technical names need not be shown on the package. When the infectious substances to be transported are unknown, but suspected of meeting the criteria for inclusion in category A and assignment to UN 2814 or UN 2900, the words “suspected category A infectious substance” must be shown, in parentheses, following the proper shipping name on the transport document, but not on the outer packagings.
- A141 Not used.
- A142 Not used.
- A143 (321) These storage systems must always be considered as containing hydrogen.
- A144 Protective breathing equipment (PBE) containing a small chemical oxygen generator for use by aircrew members may be transported on passenger aircraft in accordance with Packing Instruction 523 subject to the following conditions:
- a) the PBE must be serviceable and contained in the manufacturer’s original unopened inner packaging (i.e. vacuum sealed bag and protective container);
  - b) the PBE may only be consigned by, or on behalf of, an operator in the event that a PBE(s) has been rendered unserviceable or has been used and there is a need to replace such items so as to restore the number of PBEs on an aircraft to that required by pertinent airworthiness requirements and operating regulations;
  - c) a maximum of two PBE may be contained in a package;
  - d) the statement “Aircrew protective breathing equipment (smoke hood) in accordance with Special Provision A144” must be:
    - (i) included on the dangerous goods transport document;
    - (ii) marked adjacent to the proper shipping name on the package.
- All other requirements applicable to chemical oxygen generators must apply except that the “cargo aircraft only” handling label must not be displayed.

- A145 Waste aerosols are prohibited from air transport.
- ≠ A146 (328) This entry applies to fuel cell cartridges including when contained in equipment or packed with equipment. Fuel cell cartridges installed in or integral to a fuel cell system are regarded as contained in equipment. Fuel cell cartridge means an article that stores fuel for discharge into the fuel cell through a valve(s) that controls the discharge of fuel into the fuel cell. Fuel cell cartridges, including when contained in equipment, must be designed and constructed to prevent fuel leakage under normal conditions of transport.
- Fuel cell cartridge design types using liquids as fuels must pass an internal pressure test at a pressure of 100 kPa (gauge) without leakage.
- Except for fuel cell cartridges containing hydrogen in metal hydride which must be in compliance with A162, each fuel cell cartridge design type, including fuel cell cartridges installed in or integral to a fuel cell system, must be shown to pass a 1.2 metre drop test onto an unyielding surface in the orientation most likely to result in failure of the containment system with no loss of contents.
- A147 (329) Where substances have a flash point of 60°C or less, the package(s) must bear a “FLAMMABLE LIQUID” subsidiary risk label in addition to the hazard label(s) required by these Instructions.
- ≠ A148 (330) Not used.
- A149 Not used.
- A150 An additional subsidiary risk hazard label may be required by a Note found adjacent to the technical name entry in Table 2-7.
- A151 When dry ice is used as a refrigerant for other than dangerous goods loaded in a unit load device or other type of pallet, the quantity limits per package shown in columns 11 and 13 of Table 3-1 for dry ice do not apply. In such case, the unit load device or other type of pallet must be identified to the operator and must allow the venting of the carbon dioxide gas to prevent a dangerous build-up of pressure.
- ≠ A152 Insulated packagings containing refrigerated liquid nitrogen fully absorbed in a porous material and intended for transport, at low temperature, of non-dangerous products are not subject to these Instructions provided the design of the insulated packaging would not allow the build-up of pressure within the container and would not permit the release of any refrigerated liquid nitrogen irrespective of the orientation of the insulated packaging. The words “not restricted” and the special provision number A152 must be provided on the air waybill when an air waybill is issued.
- ≠ A153 Not used.
- A154 Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).
- + A155 (332) Magnesium nitrate hexahydrate is not subject to these Instructions.
- + A156 (333) Ethanol and gasoline, motor spirit or petrol mixtures for use in spark-ignition engines (e.g. in automobiles, stationary engines and other engines) must be assigned to this entry regardless of variations in volatility.
- + A157 (334) A fuel cell cartridge may contain an activator provided it is fitted with two independent means of preventing unintended mixing with the fuel during transport.
- + A158 (335) Mixtures of solids which are not subject to these Instructions and environmentally hazardous liquids or solids must be classified as UN 3077 and may be transported under this entry, provided there is no free liquid visible at the time the substance is loaded or at the time the packaging is closed. Sealed packets and articles containing less than 10 mL of an environmentally hazardous liquid, absorbed into a solid material but with no free liquid in the packet or article, or containing less than 10 g of an environmentally hazardous solid, are not subject to these Instructions.
- + A159 (336) A single package of non-combustible solid LSA-II or LSA-III material must not contain an activity greater than 3000 A<sub>2</sub>.

- + A160 (337) Type B(U) and Type B(M) packages, must not contain activities greater than the following:
  - a) For low dispersible radioactive material: as authorized for the package design as specified in the certificate of approval;
  - b) For special form radioactive material: 3000 A<sub>1</sub> or 100 000 A<sub>2</sub>, whichever is the lower; or
  - c) For all other radioactive material: 3000 A<sub>2</sub>.
- + A161 (338) Each fuel cell cartridge transported under this entry and designed to contain a liquefied flammable gas must:
  - a) be capable of withstanding, without leakage or bursting, a pressure of at least two (2) times the equilibrium pressure of the contents at 55°C;
  - b) not contain more than 200 mL of liquefied flammable gas with a vapour pressure not exceeding 1 000 kPa at 55°C; and
  - c) pass the hot water bath test prescribed in 6;5.4.1.
- + A162 (339) Fuel cell cartridges containing hydrogen in a metal hydride transported under this entry must have a water capacity less than or equal to 120 mL.

The pressure in the fuel cell cartridge must not exceed 5 MPa at 55°C. The design type must withstand, without leaking or bursting, a pressure of two (2) times the design pressure of the cartridge at 55°C or 200 kPa more than the design pressure of the cartridge at 55°C, whichever is greater. The pressure at which this test is conducted is referred to in the drop test and the hydrogen cycling test as the "minimum shell burst pressure".

Fuel cell cartridges must be filled in accordance with procedures provided by the manufacturer. The manufacturer must provide the following information with each fuel cell cartridge:

- a) inspection procedures to be carried out before initial filling and before refilling of the fuel cell cartridge;
- b) safety precautions and potential hazards to be aware of;
- c) method for determining when the rated capacity has been achieved;
- d) minimum and maximum pressure range;
- e) minimum and maximum temperature range; and
- f) any other requirements to be met for initial filling and refilling including the type of equipment to be used for initial filling and refilling.

The fuel cell cartridges must be designed and constructed to prevent fuel leakage under normal conditions of transport. Each cartridge design type, including cartridges integral to a fuel cell, must be subjected to and must pass the following tests:

#### Drop test

A 1.8 metre drop test onto an unyielding surface in four different orientations:

- a) vertically, on the end containing the shut-off valve assembly;
- b) vertically, on the end opposite to the shut-off valve assembly;
- c) horizontally, onto a steel apex with a diameter of 38 mm, with the steel apex in the upward position; and
- d) at a 45° angle on the end containing the shut-off valve assembly.

There must be no leakage, determined by using a soap bubble solution or other equivalent means on all possible leak locations, when the cartridge is charged to its rated charging pressure. The fuel cell cartridge must then be hydrostatically pressurized to destruction. The recorded burst pressure must exceed 85 per cent of the minimum shell burst pressure.

#### Fire test

A fuel cell cartridge filled to rated capacity with hydrogen must be subjected to a fire engulfment test. The cartridge design, which may include a vent feature integral to it, is deemed to have passed the fire test if:

- a) the internal pressure vents to zero gauge pressure without rupture of the cartridge; or
- b) the cartridge withstands the fire for a minimum of 20 minutes without rupture.

#### Hydrogen cycling test

This test is intended to ensure that a fuel cell cartridge design stress limits are not exceeded during use.

The fuel cell cartridge must be cycled from not more than 5 per cent rated hydrogen capacity to not less than 95 per cent rated hydrogen capacity and back to not more than 5 per cent rated hydrogen capacity. The rated charging pressure must be used for charging and temperatures must be held within the operating temperature range. The cycling must be continued for at least 100 cycles.

Following the cycling test, the fuel cell cartridge must be charged and the water volume displaced by the cartridge must be measured. The cartridge design is deemed to have passed the hydrogen cycling test if the water volume displaced by the cycled cartridge does not exceed the water volume displaced by an uncycled cartridge charged to 95 per cent rated capacity and pressurized to 75 per cent of its minimum shell burst pressure.

#### Production leak test

Each fuel cell cartridge must be tested for leaks at  $15^{\circ}\text{C} \pm 5^{\circ}\text{C}$ , while pressurized to its rated charging pressure. There must be no leakage, determined by using a soap bubble solution or other equivalent means on all possible leak locations.

Each fuel cell cartridge must be permanently marked with the following information:

- a) the rated charging pressure in megapascals (MPa);
  - b) the manufacturer's serial number of the fuel cell cartridges or unique identification number; and
  - c) the date of expiry based on the maximum service life (year in four digits; month in two digits).
- + A163 (340) Chemical kits, first-aid kits and polyester resin kits containing dangerous goods in inner packagings which do not exceed the quantity limits for excepted quantities applicable to individual substances as specified in column 9 of Table 3-1 may be transported in accordance with 3.5. Division 5.2 substances, although not individually permitted as excepted quantities in Table 3-1, are permitted in such kits and are assigned Code E2 (see 5.1.2).
- + A164 Any electrical battery or battery-powered device, equipment or vehicle having the potential of a dangerous evolution of heat must be prepared for transport so as to prevent:
- a) a short circuit (e.g. in the case of batteries, by the effective insulation of exposed terminals; or, in the case of equipment, by disconnection of the battery and protection of exposed terminals); and
  - b) unintentional activation.

## Chapter 4

### DANGEROUS GOODS IN LIMITED QUANTITIES

*Note.— The UN Recommendations contain provisions for limited quantities of dangerous goods. These recognize that many dangerous goods when in reasonably limited quantities present a reduced hazard during transport and can safely be carried in good quality packagings of the types specified in the Recommendations but which have not been tested and marked accordingly. The provisions contained in this paragraph are based on those in the UN Recommendations and allow limited quantities of dangerous goods to be transported in packagings which, although not tested and marked in accordance with Part 6 of these Instructions, do meet the construction requirements of that part.*

#### 4.1 APPLICABILITY

4.1.1 Limited quantities of dangerous goods may only be carried in accordance with the limitations and provisions of this chapter and must meet all the applicable requirements of the Technical Instructions unless otherwise provided for below.

4.1.2 Only dangerous goods which are permitted on passenger aircraft and which meet the criteria of the following classes, divisions and packing groups (if appropriate) may be carried under these provisions for dangerous goods in limited quantities:

≠	Class 2	Only UN 1950 in Divisions 2.1 and 2.2, and UN 2037 in Divisions 2.1 and 2.2 without a subsidiary risk
	Class 3	Packing Groups II and III
	Division 4.1	Packing Groups II and III but excluding all self-reactive substances irrespective of packing group
	Division 4.3	Packing Groups II and III, solids only
	Division 5.1	Packing Groups II and III
	Division 5.2	Only when contained in a chemical kit or a first-aid kit
	Division 6.1	Packing Groups II and III
	Class 8	Packing Groups II and III but excluding UN 2794, 2795, 2803, 2809 and 3028
	Class 9	Only UN 1941, 1990, 2071, 3077, 3082 and 3316

*Note.— Many articles or substances, including the following, are NOT permitted under these limited quantity provisions:*

- a) *those permitted only on cargo aircraft;*
- b) *those in Packing Group I;*
- c) *those in Class 1 or 7 or Divisions 2.1 (other than aerosols), 2.3 or 6.2;*
- d) *those in Division 4.2 or with a subsidiary risk 4.2.*

4.1.3 The limitations and provisions of this chapter for the transport of dangerous goods in limited quantities apply equally to both passenger and cargo aircraft.

#### 4.2 PACKING AND PACKAGINGS

4.2.1 The general packing requirements of 4;1.1 applicable to passenger aircraft must be met except that the requirements of 4;1.1.2, 4;1.1.8 c), 4;1.1.8 e) and 4;1.1.16 do not apply.

4.2.2 Packagings, including closures, which have been used more than once (i.e. they have been refilled and are being reshipped after having previously been emptied) must be inspected thoroughly and must be in such condition that they will protect their contents and perform their containment functions as efficiently as new packagings. Cushioning and absorbent materials if used previously must remain capable of performing their primary functions.

4.2.3 Single packagings, including composite packagings, are not permitted.

4.2.4 Limited quantities of dangerous goods must be packed in accordance with the applicable limited quantity packing instruction identified by the prefix letter "Y" indicated in column 10 of Table 3-1.

*Note.— The packing instruction prefixed with the letter "Y" bears the same number as the packing instruction applicable to normal quantities permitted by passenger aircraft for the entry concerned or packing group of that entry.*

4.2.5 Inner packagings must meet the requirements of 6;3.2. Outer packagings must be so designed that they meet the construction requirements in 6;3.1 which apply to the type of outer packaging to be used for the article or substance.

### 4.3 QUANTITY LIMITATIONS

4.3.1 The net quantity per package must not exceed the quantity specified in column 11 of Table 3-1 against the packing instruction number identified by the prefix letter "Y" in column 10.

4.3.2 The gross mass per package must not exceed 30 kg.

4.3.3 When different dangerous goods are contained in one outer packaging, the quantities of such dangerous goods must be so limited that:

- a) for classes other than Classes 2 and 9, the total net quantity in the package does not exceed the value of 1, where "Q" is calculated using the formula:

$$Q = \frac{n_1}{M_1} + \frac{n_2}{M_2} + \frac{n_3}{M_3} + \dots$$

where  $n_1$ ,  $n_2$ , etc., are the net quantities of the different dangerous goods and  $M_1$ ,  $M_2$  etc., are the maximum net quantities for these different dangerous goods shown in Table 3-1 against the relevant "Y" packing instructions; and

- b) for Classes 2 and 9:

- 1) when packed together without goods of other classes, the gross mass of the package does not exceed 30 kg; or
- 2) when packed together with goods of other classes, the gross mass of the package does not exceed 30 kg and the total net quantity in the package of goods other than in Classes 2 or 9 does not exceed the value of 1 when calculated according to a) above.

- c) carbon dioxide, solid (dry ice), UN 1845 may be packed together with goods of other classes, provided that the gross mass of the package does not exceed 30 kg. The quantity of dry ice does not need to be taken into account in the calculation of the "Q" value. However, the packaging containing the carbon dioxide, solid (dry ice) and the outer packaging must permit the release of carbon dioxide gas.

4.3.4 Where the different dangerous goods in the outer packaging consist only of those with the same UN number, packing group and physical state (i.e. solid or liquid), the calculation in 4.3.3 a) does not need to be made. However, the total net quantity in the package must not exceed the maximum net quantity according to Table 3-1.

### 4.4 PACKAGE TESTING

4.4.1 Each package offered for transport must be capable of withstanding a 1.2 m drop test on to a rigid, non-resilient, flat and horizontal surface, in the position most likely to cause damage. The criteria for passing the test is that the outer packaging must not exhibit any damage liable to affect safety during transport and there must be no leakage from the inner packaging(s).

4.4.2 Each package offered for transport must be capable of withstanding, without breakage or leakage of any inner packaging and without significant reduction of effectiveness, a force applied to the top surface for a duration of 24 hours equivalent to the total weight of identical packages if stacked to a height of 3 m (including the test sample).

### 4.5 PACKAGE MARKING

4.5.1 Packages containing limited quantities of dangerous goods must be marked as required by the applicable paragraphs of 5;2, except that 5;2.4.4.1 does not apply.

4.5.2 Packages containing limited quantities of dangerous goods and prepared in accordance with this chapter must be marked "limited quantity(ies)" or "LTD QTY".

**4.6 DANGEROUS GOODS TRANSPORT DOCUMENT**

The dangerous goods transport document required by 5;4.1 must contain the words “limited quantity” or “LTD QTY” to indicate that the consignment contains limited quantities of dangerous goods.

---

## Chapter 5

### DANGEROUS GOODS PACKED IN EXCEPTED QUANTITIES

*Parts of this Chapter are affected by State Variation JP 23; see Table A-1*

#### 5.1 EXCEPTED QUANTITIES

5.1.1 Excepted quantities of dangerous goods of certain classes, other than articles, meeting the provisions of this chapter are not subject to any other provisions of these Instructions except for:

- a) the training requirements in 1;4;
- b) the classification procedures and packing group criteria in Part 2; and
- c) the packaging requirements of 4;1.1.1, 4;1.1.3.1, 4;1.1.5, 4;1.1.6 and 4;1.1.7.

*Note.— In the case of radioactive material, the requirements for radioactive material in excepted packages in 1;6.1.5 apply.*

5.1.2 Dangerous goods which may be carried as excepted quantities in accordance with this chapter are shown in column 9 of the dangerous goods list by means of an alphanumeric code as indicated in Table 3-3 below:

**Table 3-3. Excepted quantity codes for Table 3-1**

Code	<i>Maximum quantity per inner packaging</i>	<i>Maximum quantity per outer packaging</i>
E0	Not permitted as Excepted Quantity	
E1	30 g/30 mL	1 kg/1 L
E2	30 g/30 mL	500 g/500 mL
E3	30 g/30 mL	300 g/300 mL
E4	1 g/1 mL	500 g/500 mL
E5	1 g/1 mL	300 g/300 mL

5.1.2.1 For gases, the volume indicated for inner packagings refers to the water capacity of the inner receptacle and the volume indicated for outer packagings refers to the combined water capacity of all inner packagings within a single outer package.

5.1.3 Where dangerous goods in excepted quantities for which different codes are assigned are packaged together, the total quantity per outer packaging must be limited to that corresponding to the most restrictive Code.

#### 5.2 PACKAGINGS

5.2.1 Packagings used for the transport of dangerous goods in excepted quantities must be in compliance with the following:

- a) there must be an inner packaging and each inner packaging must be constructed of plastic (when used for liquid dangerous goods it must have a thickness of not less than 0.2 mm), or of glass, porcelain, stoneware, earthenware or metal (see also 4;1.1.3.1) and the closure of each inner packaging must be held securely in place with wire, tape or other positive means; any receptacle having a neck with moulded screw threads must have a leak proof threaded type cap. The closure must be resistant to the contents;
- b) each inner packaging must be securely packed in an intermediate packaging with cushioning material in such a way that, under normal conditions of transport, they cannot break, be punctured or leak their contents. The intermediate packaging must completely contain the contents in case of breakage or leakage, regardless of package orientation. For liquid dangerous goods, the intermediate packaging must contain sufficient absorbent material to absorb the entire contents of the inner packaging. In such cases, the absorbent material may be the cushioning material. Dangerous goods must not react dangerously with cushioning, absorbent material and packaging material or reduce the integrity or function of the materials;

- c) the intermediate packaging must be securely packed in a strong, rigid outer packaging (wooden, fibreboard or other equally strong material);
- d) each package type must be in compliance with the provisions in 5.3;
- e) each package must be of such a size that there is adequate space to apply all necessary markings; and
- f) overpacks may be used and may also contain packages of dangerous goods or goods not subject to these Instructions.

### 5.3 TESTS FOR PACKAGES

5.3.1 The complete package as prepared for transport, with inner packagings filled to not less than 95 per cent of their capacity for solids or 98 per cent for liquids, must be capable of withstanding, as demonstrated by testing which is appropriately documented, without breakage or leakage of any inner packaging and without significant reduction in effectiveness:

- a) drops onto a rigid, non-resilient flat and horizontal surface from a height of 1.8 m:
  - 1) where the sample is in the shape of a box, it must be dropped in each of the following orientations:
    - flat on the base;
    - flat on the top;
    - flat on the longest side;
    - flat on the shortest side;
    - on a corner;
  - 2) where the sample is in the shape of a drum, it must be dropped in each of the following orientations:
    - diagonally on the top chime, with the centre of gravity directly above the point of impact;
    - diagonally on the base chime;
    - flat on the side.

*Note.— Each of the above drops may be performed on different but identical packages.*

- b) a force applied to the top surface for a duration of 24 hours, equivalent to the total weight of identical packages if stacked to a height of 3 m (including the drop sample).

5.3.2 For the purposes of testing, the substances to be transported in the packaging may be replaced by other substances except where this would invalidate the results of the tests. For solids, when another substance is used, it must have the same physical characteristics (mass, grain size, etc.) as the substance to be carried. In the drop tests for liquids, when another substance is used, its relative density (specific gravity) and viscosity must be similar to those of the substance to be transported.

### 5.4 MARKING OF PACKAGES

5.4.1 Packages containing excepted quantities of dangerous goods prepared in accordance with this chapter must be durably and legibly marked with the mark shown in Figure 3-1. The primary hazard class or, when assigned, the division of each of the dangerous goods contained in the package must be shown in the mark. Where the name of the shipper or consignee is not shown elsewhere on the package, this information must be included within the mark.

5.4.2 The dimensions of the mark must be a minimum of 100 mm × 100 mm.

5.4.3 An overpack containing dangerous goods in excepted quantities must display the markings required by 5.4.1, unless such markings on packages within the overpack are clearly visible.

### 5.5 DOCUMENTATION

If a document such as an air waybill accompanies dangerous goods in excepted quantities, it must include the statement "Dangerous Goods in Excepted Quantities" and indicate the number of packages.

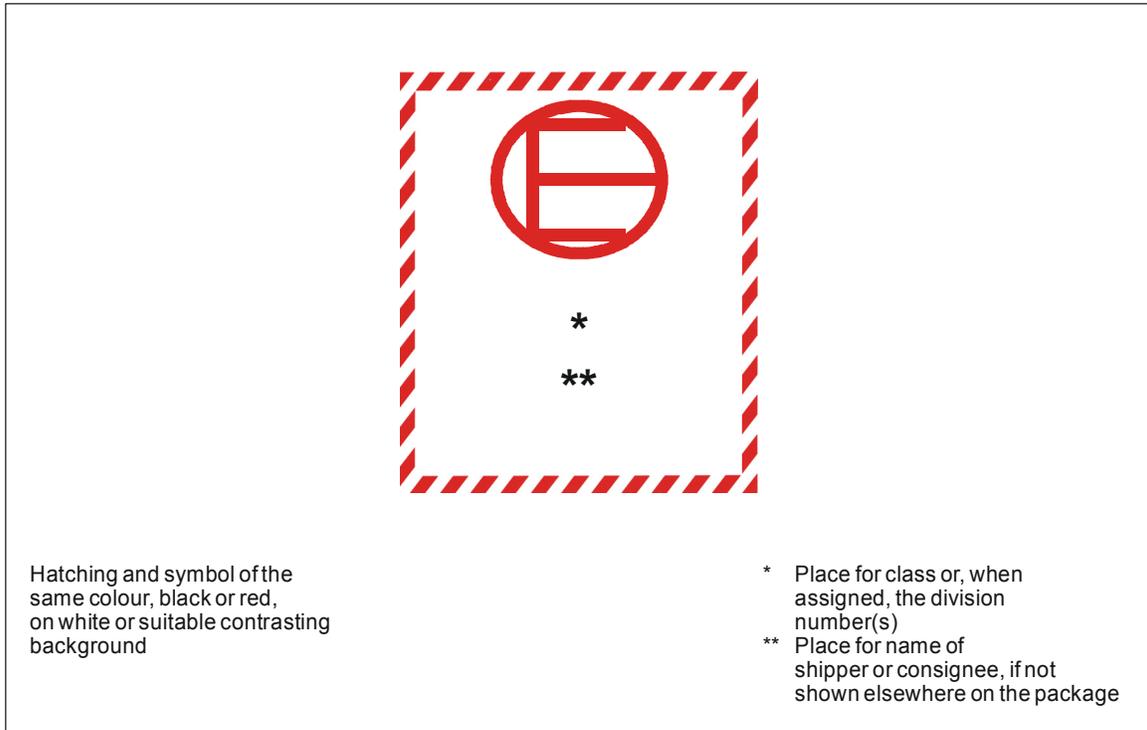

Figure 3-1. Excepted quantities mark

**Part 4**  
**PACKING INSTRUCTIONS**

## INTRODUCTORY NOTES

### *Note 1.— Packing groups*

For packing purposes, dangerous goods of all classes, other than Classes 1, 2 and 7 and Divisions 5.2 and 6.2, have been divided among three packing groups according to the degree of danger they present. The packing groups have the following meanings:

- Packing Group I — Substances presenting high danger
- Packing Group II — Substances presenting medium danger
- Packing Group III — Substances presenting low danger

Some substances in Class 9 and liquids in Division 5.1 have been assigned to packing groups by experience rather than through application of technical criteria. The packing group to which a substance is assigned is listed in Table 3-1. The criteria for the packing groups are given in Part 2, Chapters 3, 4, 5, 6 and 8.

### *Note 2.— Temperature variations*

For the information of users of these Instructions, the extremes of temperature which may be encountered in international transportation are in the order of  $-40^{\circ}\text{C}$  and  $55^{\circ}\text{C}$ . Since receptacles or packagings may be filled at low temperatures and then exposed in transit in tropical areas, the increase in temperature may tend to cause discharge of liquid contents or bursting of the receptacles or packagings during transit, unless a suitable ullage (outage) has been provided and the receptacles or packagings meet the pressure requirement specified in 1.1.6 of this Part.

### *Note 3.— Pressure variations*

Due to altitude, pressure reductions will be encountered under flight conditions which may in extreme conditions be of the order of 68 kPa. Since receptacles or packagings will generally be filled at normal atmospheric pressure of approximately 100 kPa, these pressure reductions will tend to cause discharge of liquid contents or bursting of the receptacles or packagings during flight, unless each receptacle or packaging and its closures meet the packaging test requirements.

### *Note 4.— Vibrations*

Vibrations in commercial aircraft to which packagings may be exposed range from 5 mm amplitude at 7 Hz (corresponding to 1 g acceleration), to 0.05 mm amplitude at 200 Hz (corresponding to 8 g acceleration).

### *Note 5.— Nomenclature*

A nomenclature of some packaging terms used in the Instructions is given in 1;3.1. Explanations of the codes used in this Part to designate types of inner and outer packagings may be found in Tables 6-2 and 6-3.

### *Note 6.— Portable tanks*

With the approval of the appropriate authority of the State of Origin, certain dangerous goods may also be carried on cargo aircraft in portable tanks in accordance with the provisions of Part S-4, Chapter 12 of the Supplement.

### *Note 7.— Carriage of oxygen with aquatic animals*

With the approval of the appropriate authority of the State of Origin, of Destination and of the Operator, for the purpose of providing life support to aquatic animals during transport, a cylinder containing Oxygen compressed, UN 1072, may be carried to oxygenate the water in accordance with the provisions of Table S-3-1 and Special Provision A202 (which appear in the Supplement).

### *Note 8.— Packagings for explosives, self-reactive substances and organic peroxides*

Unless specific provision to the contrary is made in these Instructions, the packagings used for goods of Class 1, self-reactive substances of Division 4.1 and organic peroxides of Division 5.2 should comply with the provisions for the medium danger (Packing Group II) category.

*Note 9.— Additional requirements for the air mode*

The transport of dangerous goods by air is subject to requirements additional to those of other modes of transport (e.g. quantity limitations, requirements for absorbent material, pressure differential requirements, appropriate closure procedures, specific packing instruction requirements).

+ *Note 10.— Carriage of flames*

With the approval of the appropriate authority of the State of Origin, or transit (where applicable), of Destination and of the Operator, lamps fuelled by UN 1223 — **Kerosene** or UN 3295 — **Hydrocarbons, liquid, n.o.s.**, carried by a passenger to transport a symbolic flame (e.g. Olympic flame, Peace flame) may be carried in accordance with the provisions of Special Provision A224 (which appears in the Supplement to this document).

+ *Editorial Note.— Packing Instructions 215 to 217, 374 to 376, 495 to 497, 873 to 875 and 965 to 970 are presented in the new format which will be adopted in the 2011-2012 edition of these Instructions (see Attachment 4).*

## Chapter 1

### GENERAL PACKING REQUIREMENTS

*Parts of this Chapter are affected by State Variations IT 7, JP 20, JP 24;  
see Table A-1*

#### 1.1 GENERAL REQUIREMENTS APPLICABLE TO ALL CLASSES EXCEPT CLASS 7

1.1.1 Dangerous goods must be packed in good quality packagings, which must be strong enough to withstand the shocks and loadings normally encountered during transport, including removal from a pallet, unit load device or overpack for subsequent manual or mechanical handling. Packagings must be constructed and closed so as to prevent any loss of contents when prepared for transport, which may be caused under normal conditions of transport, by vibration, or by changes in temperature, humidity or pressure (resulting from altitude, for example). Packagings (including inner packagings and receptacles) must be closed in accordance with the information provided by the manufacturer. No dangerous residue must adhere to the outside of packages during transport. These provisions apply, as appropriate, to new, reused, reconditioned or re-manufactured packagings.

*Note.— The nature of transport dictates that many packages are likely to be moved between different modes of transport with the attendant increase in handling, e.g. from vehicles into warehouses and then onto aircraft. Additionally, packages consigned on a pallet may be removed from that pallet to assist handling and loading which may be carried out manually. To avoid damage and leakage from packages during transport, shippers should take this into account in selecting an appropriate packaging or in making the decision about the suitability of an already packaged item. In this respect, it is recommended that single steel or aluminium packagings (1A1, 1A2, 1B1, 1B2, 3A1, 3A2, 3B1, 3B2), when transported in narrow-bodied aircraft and not otherwise protected by, for example, placement in a unit load device, be provided additional protection against the abrasive effects experienced in loading the aircraft through overpacking, palletization or other means of protecting the bottom head and chime. Also, small single packagings, with a capacity of 2 L or less, should be overpacked to facilitate handling and to permit adequate securing of the dangerous goods aboard the aircraft.*

1.1.2 New, remanufactured, reused or reconditioned packagings which are listed in Tables 6-2 and 6-3, must meet the applicable requirements of Part 6 of these Instructions. Such packagings must be manufactured and tested under a quality assurance programme which satisfies the appropriate national authority, in order to ensure that such packagings meet those applicable requirements. Where packagings are required to be tested in accordance with 6;4, their subsequent use must be as specified in the applicable test report and conform in all respects with the design type which was tested, including the method of packing and size and type of any inner packagings, except as provided for in 1.1.9.1 and 6;4.1.7. Before being filled and handed over for transport, every packaging must be inspected to ensure that it is free from corrosion, contamination or other damage. Any packaging which shows signs of reduced strength as compared with the approved design type must no longer be used or must be so reconditioned that it is able to withstand the design type tests.

+ *Note.— ISO 16106:2006 Packaging — Transport packages for dangerous goods — Dangerous goods packagings, intermediate bulk containers (IBCs) and large packagings — Guidelines for the application of ISO 9001 provides acceptable guidance on procedures which may be followed.*

#### 1.1.3 Compatibility requirements

1.1.3.1 Parts of packagings which are in direct contact with dangerous goods:

- a) must not be affected or significantly weakened by those dangerous goods; and
- b) must not cause a dangerous effect, e.g. catalyzing a reaction or reacting with the dangerous goods.

Where necessary, they must be provided with a suitable inner coating or treatment.

1.1.3.2 Materials, such as some plastics, which can be significantly softened or rendered brittle or permeable by the temperatures likely to be experienced during transport or because of the chemical action of the contents or the use of a refrigerant, must not be used. Even though certain packagings are specified in individual packing instructions, it is, nevertheless, the responsibility of the shipper to ensure that such packagings are, in every way, compatible with the articles or substances to be contained within such packagings. This particularly applies to corrosivity, permeability, softening, premature aging and embrittlement.

Particular attention should be paid to the following:

- a) the effect of fluorine on glass;
- b) the effects of corrosion on metals such as steel and aluminium; and

- c) consideration of the interaction (such as swelling, permeation, chemical degradation and environmental stress cracking) of substances with polymer materials such as polyethylene and polypropylene.

1.1.3.3 Shippers must ensure that all appropriate measures have been taken to ensure that the packagings used are compatible with the dangerous goods to be transported. Evidence of such measures or assessments must be made available to the competent authority upon request.

1.1.4 The body and the closure of any packaging must be so constructed as to be able adequately to resist the effects of temperature and vibration occurring in normal conditions of transport. Stoppers, corks or other such friction-type closures must be held securely, tightly and effectively in place by positive means (for example, by the use of adhesive tape, friction sleeves, welding or soldering, positive locking wires). The closure device must be so designed that it is unlikely that it can be incorrectly or incompletely closed, and must be such that it may be checked easily to determine that it is completely closed.

1.1.5 When filling packagings for liquids sufficient ullage (outage) must be left to ensure that neither leakage nor permanent distortion of the packaging will occur as a result of an expansion of the liquid caused by temperatures likely to prevail during transport. Liquids must not completely fill a packaging at a temperature of 55°C.

1.1.6 Packagings for which retention of liquid is a basic function must be capable of withstanding without leakage an internal pressure which produces a pressure differential of not less than 95 kPa (not less than 75 kPa for liquids in Packing Group III of Class 3 or Division 6.1), or a pressure related to the vapour pressure of the liquid to be conveyed, whichever is the greater. The pressure related to the vapour pressure must be determined as either:

- a) the total gauge pressure measured in the packaging (i.e. the vapour pressure of the filling substance and the partial pressure of the air or other inert gases, less 100 kPa) at 55°C, multiplied by a safety factor of 1.5; this total gauge pressure should be determined on the basis of a degree of filling in accordance with 1.1.5 and a filling temperature of 15°C; or
- b) 1.75 times the vapour pressure at 50°C less 100 kPa, but with a minimum of 95 kPa.

This is expressed as:

$$P = (V_{p50} \times 1.75) - 100 \text{ kPa with a minimum of 95 kPa}$$

where

P = Pressure requirement in kPa (gauge)

$V_{p50}$  = Vapour pressure at 50°C; or

- c) 1.5 times the vapour pressure at 55°C less 100 kPa, but with a minimum of 95 kPa.

This is expressed as:

$$P = (V_{p55} \times 1.5) - 100 \text{ kPa with a minimum of 95 kPa}$$

where

P = Pressure requirement in kPa (gauge)

$V_{p55}$  = Vapour pressure at 55°C.

*Note.— The capability of a packaging to withstand an internal pressure without leakage that produces the specified pressure differential should be determined by testing samples of inner packagings of combination packagings and single packagings. Pressure differential is the difference between the pressure exerted on the inside of the packaging and the pressure on the outside. The appropriate test method should be selected based on packaging type. Acceptable test methods include any method that produces the required pressure differential between the inside and outside of a single packaging or an inner packaging of a combination packaging. The test may be conducted using internal hydraulic or pneumatic pressure (gauge) or external vacuum test methods. Internal hydraulic or pneumatic pressure can be applied in most cases as the required pressure differential can be achieved under most circumstances. An external vacuum test is not acceptable if the specified pressure differential is not achieved and maintained. The external vacuum test is a generally acceptable method for rigid packagings but is not normally acceptable for:*

- flexible packagings;
- packagings filled and closed under an absolute atmospheric pressure lower than 95 kPa or for liquids in Packing Group III of Class 3 or Division 6.1 with an absolute pressure of 75 kPa;
- packagings intended for the transport of high vapour pressure liquids (i.e. vapour pressure greater than 111 kPa at 50°C or 130 kPa at 55°C and accordingly greater than 100 kPa at 50°C or 117 kPa at 55°C for liquids in Packing Group III of Class 3 or Division 6.1).

1.1.6.1 Notwithstanding the foregoing, dangerous goods may be contained in an inner packaging which does not itself meet the pressure requirement provided that the inner packaging is packed within a supplementary packaging which does meet the pressure requirement and all the other requirements of this Chapter and the applicable packing instruction.

1.1.7 Dangerous goods must not be packed together in the same outer packaging with dangerous or other goods if they react dangerously with each other and cause:

- a) combustion and/or evolution of considerable heat;
- b) evolution of flammable, toxic or asphyxiant gases;
- c) the formation of corrosive substances; or
- d) the formation of unstable substances.

1.1.8 Subject to 1.1.7 an outer packaging may contain more than one item of dangerous goods provided that:

- a) the inner packaging used for each item of dangerous goods and the quantity contained therein complies with the relevant part of the packing instruction applicable to that item;
- b) the outer packagings used are permitted by all the packing instructions applicable to each item of dangerous goods;
- c) the package as prepared for shipment meets the specification performance tests for the most restrictive packing group of a substance or article contained in the package;
- d) the dangerous goods do not require segregation according to Table 7-1, unless otherwise provided for in these Instructions; and
- e) the quantities of different dangerous goods contained in one outer packaging must be such that "Q" does not exceed the value of 1, where "Q" is calculated using the formula:

$$Q = \frac{n_1}{M_1} + \frac{n_2}{M_2} + \frac{n_3}{M_3} + \dots$$

where  $n_1$ ,  $n_2$ , etc. are the net quantities of the different dangerous goods and  $M_1$ ,  $M_2$ , etc. are the maximum net quantities for these different dangerous goods according to Table 3-1 for passenger or cargo aircraft as applicable. However, the following dangerous goods do not need to be taken into account in the calculation of the "Q" value:

- 1) carbon dioxide, solid (dry ice), UN 1845;
  - 2) those where columns 11 and 13 of Table 3-1 indicate "No limit";
  - 3) those with the same UN number, packing group, and physical state (i.e. solid or liquid), providing they are the only dangerous goods in the package and the total net quantity does not exceed the maximum net quantity according to Table 3-1.
- + 4) those where columns 11 and 13 of Table 3-1 indicate a maximum gross mass per package.
- + f) for packages containing dangerous goods where the letter "G" follows the quantity shown in column 11 or 13 of Table 3-1, the gross mass of the completed package does not exceed the lowest applicable gross mass.

An outer packaging containing Division 6.2 (Infectious Substances) may contain material for refrigeration, or freezing or packaging material such as absorbent material.

*Note.— For packages containing radioactive material, see 9.1.3.*

1.1.9 Inner packagings must be so packed, secured or cushioned in an outer packaging in such a way that, under normal conditions of transport, they cannot break, be punctured or leak their contents into the outer packaging. Inner packagings containing liquids must be packaged with their closures upward and placed within outer packagings consistent with the orientation markings prescribed in 5.3.2.11 b) of these Instructions. Inner packagings that are liable to break or be punctured easily, such as those made of glass, porcelain or stoneware or of certain plastic material, must be secured in outer packagings with suitable cushioning material. Any leakage of the contents must not substantially impair the protective properties of the cushioning material or of the outer packaging.

1.1.9.1 Where an outer packaging of a combination packaging has been successfully tested with different types of inner packagings, a variety of such different inner packagings may also be assembled in this outer packaging or large packaging. In addition, provided an equivalent level of performance is maintained, the following variations in inner packagings are allowed without further testing of the package:

- a) inner packagings of equivalent or smaller size may be used provided:
  - 1) the inner packagings are of similar design to the tested inner packagings (e.g. shape — round, rectangular);
  - 2) the material of construction of the inner packagings (glass, plastics, metal, etc.) offers resistance to impact and stacking forces equal to or greater than that of the originally tested inner packaging;

- 3) the inner packagings have the same or smaller openings and the closure is of similar design (screw cap, friction lid, etc.);
  - 4) sufficient additional cushioning material is used to take up void spaces and to prevent significant movement of the inner packagings; and
  - 5) inner packagings are oriented within the outer packaging in the same manner as in the tested package; and
- b) a lesser number of the tested inner packagings, or of the alternative types of inner packagings identified in a) above, may be used provided sufficient cushioning is added to fill the void space(s) and to prevent significant movement of the inner packagings.

1.1.10 Unless otherwise provided in the packing instructions, liquids in Class 3, 4 or 8, or Division 5.1, 5.2 or 6.1 that are packaged in glass, earthenware, plastic or metal inner packagings must be packaged using absorbent material as follows:

- a) Packing Group I liquids on passenger aircraft must be packaged using material capable of absorbing the entire contents of the inner packagings containing such liquids;
- b) Packing Group I liquids on cargo aircraft and Packing Group II liquids and liquids in Division 5.2 on passenger and cargo aircraft must be packaged using a sufficient quantity of absorbent material to absorb the entire contents of any one of the inner packagings containing such liquids and, where they are of different sizes and quantities, sufficient absorbent material to absorb the contents of the inner packaging with the greatest quantity.

1.1.10.1 Absorbent material is not required if the inner packagings are so protected that breakage of them and leakage of their contents from the outer packaging will not occur during normal conditions of transport. Where absorbent material is required and an outer packaging is not liquid tight, a means of containing the liquid in the event of a leakage must be provided in the form of a leakproof liner, plastic bag or other equally efficient means of containment.

1.1.10.2 Absorbent material must not react dangerously with the liquid.

1.1.11 The nature and the thickness of the outer packaging must be such that friction during transport does not generate any heat likely to alter dangerously the chemical stability of the contents.

1.1.12 Venting of packagings to reduce internal pressure, which may develop by the evolution of gas from the contents, is not permitted for air transport, except as otherwise specified in these Instructions.

1.1.13 Combination packagings containing liquid dangerous goods, excluding flammable liquids in inner packagings of 120 mL or less, or infectious substances in primary receptacles not exceeding 50 mL, must be packed so that the closures on the inner packagings are upward and the upright position of the package must be indicated on it by the "Package orientation" label shown in 5;3.2.11 b). The words "This side up" or "This end up" may also be displayed on the top cover of the package.

1.1.14 Except as provided in 5;3.5.1.1 a), a package must be of such size that there is adequate space to affix all necessary labels and markings.

1.1.15 An empty packaging that has contained a dangerous substance must be treated in the same manner as is required by these Instructions for a package filled with that substance unless adequate measures have been taken to nullify any hazard.

*Note.— Purging and thorough flushing of the packaging with a neutralizing agent is an acceptable method of nullifying the hazard.*

1.1.16 Packagings tested as prescribed in 6;4.5 and marked with the hydraulic test pressure prescribed in 6;2.1.1 d) 1) must be filled only with a liquid having a vapour pressure:

- a) such that the total gauge pressure in the packaging (i.e. the vapour pressure of the filling substance plus the partial pressure of air or other inert gases, less 100 kPa) at 55°C, determined on the basis of a maximum degree of filling in accordance with 1.1.5 and a filling temperature of 15°C, will not exceed two-thirds of the marked test pressure; or
- b) at 50°C less than four-sevenths of the sum of the marked test pressure plus 100 kPa; or
- c) at 55°C less than two-thirds of the sum of the marked test pressure plus 100 kPa (see Table 4-1).

However, where the packaging is selected on the basis of 1.1.16 a) the hydraulic test pressure marked in accordance with 6;2.1.1 d) 1) must be not less than 100 kPa (not less than 80 kPa for liquids in Packing Group III of Class 3 or Division 6.1).

1.1.17 Packagings used for solids which may become liquid at temperatures encountered during air transport must also be capable of containing that substance in the liquid state.

*Note.— Packagings for solids (both inner and single) which may be permitted by the applicable packing instruction should not be used if they are unsuitable for containing liquids (e.g. paper or plastic bags as inner packagings, unlined fibre drums as single packagings, should not be used).*

**Table 4-1. Examples of required marked test pressures calculated as in 1.1.16 c)**

UN No.	Name	Class	Packing Group	$V_{p55}$ (kPa)	$V_{p55} \times 1.5$ (kPa)	$(V_{p55} \times 1.5) \text{ minus } 100$ (kPa)	Required minimum test pressure (gauge) under 6;4.5.3 c) (kPa)	Minimum test pressure (gauge) to be marked on the packaging (kPa)
2056	Tetrahydrofuran	3	II	70	105	5	100	100
2247	n-Decane	3	III	1.4	2.1	-97.9	100	100
1593	Dichloromethane	6.1	III	164	246	146	146	150
1155	Diethyl ether	3	I	199	299	199	199	250

*Note 1.— For pure liquids the vapour pressure at 55°C ( $V_{p55}$ ) can often be obtained from scientific tables.*

*Note 2.— The maximum vapour pressures in 1.1.16 b) and c) refer to the basis of the formula while the minimum hydraulic test pressure in the last sentence of 1.1.16 refers to the aircraft altitude.*

*Note 3.— This table refers to the use of 1.1.16 c) only, which means that the marked test pressure must exceed 1.5 times the vapour pressure at 55°C less 100 kPa. When, for example, the test pressure for n-Decane is determined according to 6;4.5.3 a) the minimum marked test pressure of 80 kPa applies.*

*Note 4.— For Diethyl ether the required minimum test pressure under 6;4.5.4 is 250 kPa.*

1.1.18 Every packaging intended to contain liquids must successfully undergo a suitable leakproofness test and be capable of meeting the appropriate test level indicated in 6;4.4.2:

- a) before it is first used for transport;
- b) after remanufacturing or reconditioning, before it is reused for transport.

For this test, packagings need not have their own closures fixed.

The inner receptacle of composite packagings may be tested without the outer packaging provided the test results are not affected. This test is not necessary for inner packagings of combination packagings.

1.1.19 The closures of packagings containing wetted or diluted substances must be such that the percentage of liquid (water, solvent or phlegmatizer) does not fall below the prescribed limits during transport.

1.1.20 For plastic drums and jerricans, unless otherwise approved by the appropriate national authority, the period of use permitted for the transport of dangerous goods must be not more than five years from the date of manufacture of the receptacles, except where a shorter period of use is prescribed because of the nature of the substance to be transported.

## 1.2 PACKING GROUP

Unless otherwise provided for, the specification packagings (i.e. those listed in Table 6-2) detailed in the packing instructions must meet the performance test requirements of the relevant packing group shown in column 8 of Table 3-1 for the particular substance or article.

## 1.3 TRANSITIONAL PACKAGING ARRANGEMENTS FOR RADIOACTIVE MATERIAL

For the arrangements for the use of packagings for radioactive material manufactured under earlier requirements, see 6;7.23.

## 1.4 SALVAGE PACKAGINGS

1.4.1 Damaged, defective, leaking or non-conforming packages, or dangerous goods that have spilled or leaked may be transported in salvage packagings (see 1;3.1.1) meeting the requirements of 1.4.2 and 6;4.8. These salvage packagings may be used provided that appropriate measures are taken to prevent excessive movement of the damaged or leaking packages

within the salvage packaging and that when the salvage packaging contains liquids, sufficient absorbent material is added to eliminate the presence of free liquid. Prior approval from the appropriate national authority must be obtained to ship salvage packagings.

1.4.2 Salvage packagings must be single packagings of a material resistant to any chemical or other action of the leaking or spilled dangerous goods. Not more than one damaged, defective or leaking package of dangerous goods may be packed in any one of such single packagings.

1.4.3 Damaged, defective or leaking packages of dangerous goods of Classes 1, 2 and 7 and Division 6.2 (other than Clinical waste and Medical waste falling under UN 3291) must not be transported in salvage packagings.

1.4.4 Damaged, defective or leaking packages of self-reactive substances of Division 4.1 or substances of Division 5.2 must not be transported in metal salvage packagings meeting Packing Group I requirements.

---

## Chapter 2

### GENERAL

2.1 Each of the succeeding Chapters of this Part is devoted to the specific packing instructions applicable to an individual class of dangerous goods. In some cases the Chapters start with general requirements which apply to all goods in that class.

2.2 The Dangerous Goods List (Table 3-1) shows for each article or substance, in columns 10 and 12, the number of the packing instruction that must be used.

2.3 The packing instruction numbers are prominently displayed on the outer edge of each page for easy reference. Each instruction shows, where applicable, the acceptable single and combination packagings. For combination packagings, tables show the acceptable outer packagings and associated inner packagings with the maximum net quantity permitted in each inner packaging. The maximum quantity per inner packaging may be further limited by the maximum quantity per package specified in Table 3-1. Where provisions for particular articles or substances apply, tables show the inner packagings with associated quantity limitations and single packagings which are acceptable for the individual commodities (identified by their UN Number). If a commodity is identified in the table applicable to inner packagings of combination packagings but not in the table applicable to single packagings, it means that the particular commodity is not permitted in single packagings. Where appropriate, particular packing requirements are also indicated for each commodity; these requirements are detailed at the end of that packing instruction. Particular packing requirements apply to both inner packagings of combination packagings and single packagings as appropriate.

2.4 Unless otherwise specified, each packaging must conform to the applicable requirements of Part 6. Generally packing instructions do not provide guidance on compatibility and the user must not select a packaging without checking that the substance is compatible with the packaging material selected (e.g. most fluorides are unsuitable for glass receptacles). Where glass receptacles are permitted in the packing instructions porcelain, earthenware and stoneware packagings are also allowed.

2.5 The following packagings must not be used when the substances being transported are liable to become liquid during transport:

Drums:	1D and 1G
Boxes:	4C1, 4C2, 4D, 4F, 4G and 4H1
Bags:	5L1, 5L2, 5L3, 5H1, 5H2, 5H3, 5H4, 5M1 and 5M2
Composite packagings:	6HC, 6HD2, 6HG1, 6HG2, 6HD1, 6PC, 6PD1, 6PD2, 6PG1, 6PG2 and 6PH1.

2.6 Where the packing instructions in this Part authorize the use of a particular type of outer packaging (e.g. 4G, 1A2), packagings bearing the same packaging identification code followed by the letters "V", "U" or "W" marked in accordance with the requirements of 6;4.1.7 h) (e.g. 4GV, 4GU or 4GW; 1A2V, 1A2U or 1A2W) may also be used under the same conditions and limitations applicable to the use of that type of packaging according to the relevant packing instruction. For example, a combination packaging marked with the packaging code "4GV" may be used whenever a combination packaging marked "4G" is authorized, provided the requirements in the relevant packing instruction regarding types of inner packagings and quantity limitations are respected.

2.7 Cylinders may be used for liquids and solids when indicated in a packing instruction. The cylinder must meet the standards set out below.

2.7.1 Unless otherwise indicated in these Instructions, cylinders conforming to:

- a) the applicable requirements of 6;5; or
- b) the national or international standards on the design, construction, testing, manufacturing and inspection, as applied by the country in which the cylinders are manufactured, provided that the provisions of 2.7 and 6;5.3.3 are met.

2.7.2 Every design type of cylinder must be approved by the competent authority of the country of manufacture or as indicated in 6;5.

2.7.3 Unless otherwise indicated, cylinders having a minimum test pressure of 0.6 MPa must be used.

2.7.4 Unless otherwise indicated, cylinders may be provided with an emergency pressure relief device designed to avoid bursting in case of overfill or fire accidents.

Cylinder valves must be designed and constructed in such a way that they are inherently able to withstand damage without release of the contents or must be protected from damage which could cause inadvertent release of the contents of the cylinder, by one of the methods as given in 4.1.1.8 a) to e).

2.7.5 The level of filling must not exceed 95 per cent of the capacity of the cylinder at 50°C. Sufficient ullage (outage) must be left to ensure that the cylinder will not be liquid full at a temperature of 55°C.

2.7.6 Unless otherwise indicated cylinders must be subjected to a periodic inspection and test every 5 years. The periodic inspection must include an external examination, an internal examination or alternative method as approved by the competent authority, a pressure test or equivalent effective non-destructive testing with the agreement of the competent authority including an inspection of all accessories (e.g. tightness of valves, emergency relief valves of fusible elements). Cylinders must not be filled after they become due for periodic inspection and test but may be transported after the expiry of the time limit. Cylinder repairs must meet the requirements of 4.1.1.11.

≠ 2.7.7 Prior to filling, the filler must perform an inspection of the cylinder and ensure that the cylinder is authorized for the substances to be transported and that the provisions of these Instructions have been met. Shut-off valves must be closed after filling and remain closed during transport. The shipper must verify that the closures and equipment are not leaking.

2.7.8 Refillable cylinders must not be filled with a substance different from that previously contained unless the necessary operations for change of service have been performed.

2.7.9 Marking of cylinders for liquids and solids according to 2.7 (not conforming to the requirements of 6;5) must be in accordance with the requirements of the competent authority of the country of manufacturing.

2.8 The appropriate authority of the State of Origin may approve the use of a packaging alternative to those provided in a particular packing instruction indicated in Table 3-1 for listed dangerous goods provided:

- a) the alternative packaging complies with the general requirements of 4;1;
- b) when the particular packaging instruction indicated in Table 3-1 specifies packagings which are listed in Tables 6-2 and 6-3, the alternative packaging must meet the applicable requirements of Part 6;
- c) for the type of alternative packaging, the expressions "Not used in these Instructions" or "Specialized use only" do not appear in Table 6-2 under the "Paragraph" column heading;
- d) the appropriate authority of the State of Origin determines that the alternative packaging achieves at least the same level of safety as if the substance were packed in accordance with a method specified in the particular packing instruction indicated in Table 3-1;
- e) the maximum net quantity of dangerous goods in the packaging does not exceed the quantity specified in the appropriate column of Table 3-1; and
- f) a copy of the document of approval accompanies each consignment.

## 2.9 UNPACKAGED ARTICLES OTHER THAN CLASS 1 ARTICLES

The appropriate authority of the State of Origin may approve the transport of large and robust articles which cannot be packaged in accordance with the requirements of 6;1 to 6;4, where they have to be transported empty, uncleaned and unpackaged, providing they comply with the requirements in Part S-4, Chapter 3 of the Supplement.

## Chapter 3

### CLASS 1 — EXPLOSIVES

*Parts of this Chapter are affected by State Variation BE 2;  
see Table A-1*

#### 3.1 PACKING GROUP

Packagings must conform to the requirements of 6;1 and must meet the test requirements of 6;4.1 for Packing Group II, subject to 1.1.17 and 6;1.2.7. However, packagings, other than metal packagings, meeting the test criteria of Packing Group I may be used.

#### 3.2 GENERAL REQUIREMENTS

3.2.1 The general packing requirements of 4;1 must be met.

3.2.2 All packagings for Class 1 explosives must be so designed and constructed that:

- a) they will protect the explosives, prevent them from escaping and cause no increase in the risk of unintended ignition or initiation when subjected to normal conditions of transport including foreseeable changes in temperature, humidity and pressure;
- b) the complete package can be handled safely in normal conditions of transport; and
- c) the packages will withstand any loading imposed on them by foreseeable stacking to which they will be subject during transport so that they do not add to the risk presented by the explosives, the containment function of the packagings is not harmed, and they are not distorted in a way or to an extent which will reduce their strength or cause instability of a stack.

3.2.3 All explosive substances and articles, as prepared for transport, must have been classified in accordance with the procedures detailed in 2;1.5.

#### 3.3 GENERAL PACKING PROVISIONS

3.3.1 The general provisions detailed below are in addition to those in Part 4, Chapter 1.

3.3.1.1 The closure device of packagings containing liquid explosives must ensure a double protection against leakage.

3.3.1.2 The closure device of metal drums must include a suitable gasket; if a closure device includes a screw-thread, the ingress of explosive substances into the screw-thread must be prevented.

3.3.1.3 Packagings for water soluble substances must be water-resistant.

3.3.1.4 When the packaging includes a double envelope filled with water which may freeze during transport, a sufficient quantity of an anti-freeze agent must be added to the water to prevent freezing. Anti-freeze that could create a fire hazard because of its inherent flammability must not be used.

3.3.1.5 Nails, staples and other closure devices made of metal without protective covering must not penetrate to the inside of the outer packaging unless the inner packaging adequately protects the explosives against contact with the metal.

3.3.1.6 Inner packagings, fittings and cushioning materials and the placing of explosive substances or articles in packages must be accomplished in a manner which prevents the explosive substances or articles from becoming loose in the outer packaging under normal conditions of transport. Metallic components of articles must be prevented from making contact with metal packagings. Articles containing explosive substances not enclosed in an outer casing must be separated from each other in order to prevent friction and impact. Padding, trays, partitioning in the inner or outer packaging, mouldings or receptacles may be used for this purpose.

3.3.1.7 Packagings must be made of materials compatible with, and impermeable to, the explosives contained in the package, so that neither interaction between the explosives and the packaging materials, nor leakage, causes the explosive to become unsafe to transport, or the hazard division or compatibility group to change.

3.3.1.8 The ingress of explosive substances into the recesses of seamed metal packagings must be prevented.

3.3.1.9 Plastic packagings must not be liable to generate or accumulate sufficient static electricity so that a discharge could cause the packaged explosive substances or articles to initiate, ignite or function.

3.3.1.10 Explosive substances must not be packed in inner or outer packagings where the differences in internal and external pressures, due to thermal or other effects, could cause an explosion or rupture of the package.

3.3.1.11 Whenever loose explosive substances or the explosive substance of an uncased or partly cased article may come into contact with the inner surface of metal packagings (1A2, 1B2, 4A, 4B and metal receptacles), the metal packaging must be provided with an inner liner or coating (see 1.1.3).

3.3.1.12 Packing Instruction 101 may be used for any explosive provided the package has been approved by an appropriate national authority regardless of whether the packaging complies with the packing instruction assignment in the Dangerous Goods List.

3.3.1.13 Electro-explosive devices must be adequately protected against electro-magnetic radiation and stray currents.

3.3.1.14 Large and robust explosive articles, normally intended for military use, without their means of initiation or without their means of initiation containing at least two effective protective features, may be carried unpackaged. When such articles have propelling charges or are self-propelled, their ignition systems must be protected against stimuli encountered during normal conditions of transport. A negative result in Test Series 4 on an unpackaged article indicates that the article can be considered for transport unpackaged. Such unpackaged articles may be fixed to cradles or contained in crates or other suitable handling, storage or launching devices in such a way that they will not become loose during normal conditions of transport.

3.3.1.14.1 Where such large explosive articles are, as part of their operational safety and suitability tests, subjected to test regimes that meet the intentions of these Instructions and such tests have been successfully undertaken, the appropriate national authority may approve such articles to be transported under these Instructions.

*Note 1.— The term receptacle used in the Inner and Intermediate packaging columns of this table includes boxes, bottles, cans, drums, jars and tubes, including any means of closure.*

*Note 2.— Reels are devices made of plastics, wood, fibreboard, metal or other suitable material comprising a central spindle with, or without, side walls at each end of the spindle. Articles and substances can be wound onto the spindle and may be retained by side walls.*

*Note 3.— Trays are sheets of metal, plastics, wood, fibreboard or other suitable material which are placed in the inner, intermediate or outer packaging and achieve a close-fit in such packaging. The surface of the tray may be shaped so that packagings or articles can be inserted, held secure and separated from each other.*

**3.4 PACKING INSTRUCTIONS**

<b>101</b>	<b>PACKING INSTRUCTION 101</b>		<b>101</b>
<i>Inner packagings</i>	<i>Intermediate packagings</i>	<i>Outer packagings</i>	
As specified by the appropriate national authority.			
The State's distinguishing sign for motor vehicles in international traffic of the country for which the authority acts must be marked on the dangerous goods transport document as follows: "Packaging approved by the competent authority of ..."			
<i>Note.— In this instance the term "competent authority" is used for intermodal compatibility; it refers to the appropriate national authority.</i>			

114	PACKING INSTRUCTION 114		114
<b>a) solid wetted</b>			
<i>Inner packagings</i>	<i>Intermediate packagings</i>	<i>Outer packagings</i>	
Bags plastic textile woven plastic	Bags plastic textile, plastic coated or lined	Boxes fibreboard (4G) natural wood, ordinary (4C1) natural wood, with siftproof walls (4C2) plywood (4D) reconstituted wood (4F) solid plastic (4H2) steel (4A)	
Receptacles metal plastic	Receptacles metal plastic	Drums aluminium, removable head (1B2) fibre (1G) plastic, removable head (1H2) plywood (1D) steel, removable head (1A2)	
<b>PARTICULAR PACKING REQUIREMENTS OR EXCEPTIONS:</b>			
<ul style="list-style-type: none"> <li>— For UN 0077, 0234, 0235 and 0236, packagings must be lead-free.</li> <li>— For UN 0342, inner packagings are not required when metal (1A2 or 1B2) or plastic (1H2) drums are used as outer packagings.</li> <li>— Intermediate packagings are not required if leakproof removable head drums are used as the outer packaging.</li> </ul>

## Chapter 4

### CLASS 2 — GASES

*Parts of this Chapter are affected by State Variations CA 17, US 6, US 15; see Table A-1*

#### 4.1 SPECIAL PACKING PROVISIONS FOR DANGEROUS GOODS OF CLASS 2

##### 4.1.1 General requirements

4.1.1.1 This section provides general requirements applicable to the use of cylinders and closed cryogenic receptacles for the transport of Class 2 gases (e.g. UN 1072 **Oxygen, compressed**). Cylinders and closed cryogenic receptacles must be constructed and closed so as to prevent any loss of contents which might be caused under normal conditions of transport, including by vibration, or by changes in temperature, humidity or pressure (resulting from change in altitude, for example).

≠ 4.1.1.2 Parts of cylinders and closed cryogenic receptacles that are in direct contact with dangerous goods must not be affected or weakened by those dangerous goods and must not cause a dangerous effect (e.g. catalysing a reaction or reacting with the dangerous goods). In addition to the requirements specified in the relevant packing instruction, which take precedence, the applicable provisions of ISO 11114-1:1997 and ISO 11114-2:2000 must be met.

4.1.1.3 Cylinders and closed cryogenic receptacles, including their closures, must be selected that are able to contain a gas or a mixture of gases according to the requirements of 6;5.1.2 and the requirements of the specific packing instructions of this Part.

4.1.1.4 Refillable cylinders must not be filled with a gas or gas mixture different from that previously contained unless the necessary operations for change of gas service have been performed. The change of service for compressed and liquefied gases must be in accordance with ISO 11621:1997, as applicable. In addition, a cylinder that previously contained a Class 8 corrosive substance or a substance of another class with a corrosive subsidiary risk must not be authorized for the transport of a Class 2 substance unless the necessary inspection and testing as specified in 6;5.1.6 have been performed.

4.1.1.5 Prior to filling, the filler must perform an inspection of the cylinder or closed cryogenic receptacle and ensure that the cylinder or closed cryogenic receptacle is authorized for the gas to be transported and that the provisions of these Instructions have been met. Shut-off valves must be closed after filling and remain closed during transport. The shipper must verify that the closures and equipment are not leaking.

4.1.1.6 Cylinders and closed cryogenic receptacles must be filled according to the working pressures, filling ratios and provisions specified in the appropriate packing instruction for the specific substance. Reactive gases and gas mixtures must be filled to a pressure such that if complete decomposition of the gas occurs, the working pressure of the cylinder must not be exceeded.

4.1.1.7 Cylinders and closed cryogenic receptacles, including their closures, must conform to the design, construction, inspection and testing requirements detailed in 6;5. When outer packagings are prescribed, the cylinders must be firmly secured therein. Unless otherwise specified in the detailed packing instructions, one or more inner packagings may be enclosed in an outer packaging.

4.1.1.8 Valves must be designed and constructed in such a way that they are inherently able to withstand damage without release of the contents or must be protected from damage, which could cause inadvertent release of the contents of the cylinder and closed cryogenic receptacle, by one of the following methods:

- a) Valves are placed inside the neck of the cylinder and closed cryogenic receptacle and protected by a threaded plug or cap;
- b) Valves are protected by caps. Caps must possess vent holes of a sufficient cross-sectional area to evacuate the gas if leakage occurs at the valves;
- c) Valves are protected by shrouds or guards;
- d) Not used; or
- e) Cylinders and closed cryogenic receptacles are transported in an outer packaging. The packaging as prepared for transport must be capable of meeting the drop test specified in 6;4.3 at the Packing Group I performance level.

For cylinders and closed cryogenic receptacles with valves as described in b) and c), the requirements of ISO 11117:1998 must be met; for valves with inherent protection, the requirements of Annex B of ISO 10297:1999 must be met.

4.1.1.9 Non-refillable cylinders and closed cryogenic receptacles must:

- a) be transported in an outer packaging, such as a box, or crate, or in shrink-wrapped trays or stretch-wrapped trays;
- b) not used;
- c) not be repaired after being put into service.

4.1.1.10 Refillable cylinders, other than closed cryogenic receptacles, must be periodically inspected according to the provisions of 6;5.1.6 and Packing Instruction 200. Cylinders and closed cryogenic receptacles must not be filled after they become due for periodic inspection but may be transported after the expiry of the time limit.

4.1.1.11 Repairs must be consistent with the fabrication and testing requirements of the applicable design and construction standards and are only permitted as indicated in the relevant periodic inspection standards specified in 6;5.2.4. Cylinders, other than the jacket of closed cryogenic receptacles, must not be subjected to repairs of any of the following:

- a) weld cracks or other weld defects;
- b) cracks in walls;
- c) leaks or defects in the material of the wall, head or bottom.

4.1.1.12 Cylinders and closed cryogenic receptacles must not be offered for filling:

- a) when damaged to such an extent that the integrity of the cylinder and closed cryogenic receptacle or its service equipment may be affected;
- b) unless the cylinder and closed cryogenic receptacle and its service equipment have been examined and found to be in good working order; or
- c) unless the required certification, retest, and filling markings are legible.

4.1.1.13 Filled cylinders and closed cryogenic receptacles must not be offered for transport:

- a) when leaking;
- b) when damaged to such an extent that the integrity of the cylinder and closed cryogenic receptacle or its service equipment may be affected;
- c) unless the cylinder and closed cryogenic receptacle and its service equipment have been examined and found to be in good working order; or
- d) unless the required certification, retest, and filling markings are legible.

## 4.2 PACKING INSTRUCTIONS

200	PACKING INSTRUCTION 200	200
<p>For cylinders, the general packing requirements of 1.1 and 4.1.1 must be met.</p> <p>Cylinders, constructed as specified in 6;5 are authorized for the transport of a specific substance when specified in the following tables (Table 1 and Table 2). Cylinders other than UN marked and certified cylinders may be used if the design, construction, testing, approval and markings conform to the requirements of the appropriate national authority in which they are approved and filled. The substances contained must be permitted in cylinders and permitted for air transport according to these Instructions. Cylinders for which prescribed periodic tests have become due must not be charged and offered for transport until such retests have been successfully completed. Valves must be suitably protected or must be designed and constructed in such a manner that they are able to withstand damage without leakage as specified in Annex B of ISO 10297:1999. Cylinders with capacities of one litre or less must be packaged in outer packaging constructed of suitable material of adequate strength and design in relation to the packaging capacity and its intended use, and secured or cushioned so as to prevent significant movement within the outer packaging during normal conditions of transport. For some substances, the special packing provisions may prohibit a particular type of cylinder. The following requirements must be met:</p> <ul style="list-style-type: none"> <li>1) Pressure relief devices must be fitted on cylinders used for the transport of UN 1013 <b>Carbon dioxide</b> and UN 1070 <b>Nitrous oxide</b>. Other cylinders must be fitted with a pressure relief device if specified by the appropriate national authority of the country of use. The type of pressure relief device, the set to discharge pressure and relief capacity of pressure relief devices, if required, must be specified by the appropriate national authority of the country of use. Manifolding of cylinders is not permitted.</li> </ul>		

- 2) The following two tables cover compressed gases (Table 1) and liquefied and dissolved gases (Table 2). They provide:
- the UN number, name and description, and classification of the substance;
  - the LC<sub>50</sub> for toxic substances;
  - the types of cylinders authorized for the substance, shown by the letter "X";
  - the maximum test period for periodic inspection of the cylinders;
  - the minimum test pressure of the cylinders;
  - the maximum working pressure of the cylinders for compressed gases (where no value is given, the working pressure must not exceed two-thirds of the test pressure) or the maximum filling ratio(s) dependent on the test pressure(s) for liquefied and dissolved gases;
  - special packing provisions that are specific to a substance.

- 3) In no case must cylinders be filled in excess of the limit permitted in the following requirements:

- For compressed gases, the working pressure must be not more than two-thirds of the test pressure of the cylinders. Restrictions to this upper limit on working pressure are imposed by special packing provision "o". In no case must the internal pressure at 65°C exceed the test pressure.
- For high pressure liquefied gases, the filling ratio must be such that the settled pressure at 65°C does not exceed the test pressure of the cylinders.

The use of test pressures and filling ratios other than those in the table is permitted provided that the above criterion is met, except where special packing provision "o" applies.

For high pressure liquefied gases and gas mixtures for which relevant data are not available, the maximum filling ratio (FR) must be determined as follows:

$$FR = 8.5 \times 10^{-4} \times d_g \times P_h$$

where FR = maximum filling ratio  
 $d_g$  = gas density (at 15°C, 1 bar)(in g/l)  
 $P_h$  = minimum test pressure (in bar).

If the density of the gas is unknown, the maximum filling ratio must be determined as follows:

$$FR = \frac{P_h \times MM \times 10^{-3}}{R \times 338}$$

where FR = maximum filling ratio  
 $P_h$  = minimum test pressure (in bar)  
 MM = molecular mass (in g/mol)  
 $R = 8.31451 \times 10^{-2}$  bar.l/mol.K (gas constant).

For gas mixtures, the average molecular mass is to be taken, taking into account the volumetric concentrations of the various components.

- For low pressure liquefied gases, the maximum mass of contents per litre of water capacity (filling factor) must equal 0.95 times the density of the liquid phase at 50°C; in addition, the liquid phase must not fill the cylinder at any temperature up to 60°C. The test pressure of the cylinder must be at least equal to the vapour pressure (absolute) of the liquid at 65°C, minus 100 kPa (1 bar).

For low pressure liquefied gases for which filling data is not provided in the table, the maximum filling ratio must be determined as follows:

$$FR = (0.0032 \times BP - 0.24) \times d_1$$

where FR = maximum filling ratio  
 BP = boiling point (in Kelvin)  
 $d_1$  = density of the liquid at boiling point (in kg/l).

- For UN 1001, **Acetylene, dissolved**, and UN 3374 **Acetylene, solvent free**, see p).

- 4) Keys for the column "Special packing provisions":

Material compatibility

- Aluminium alloy cylinders are forbidden.
- Copper valves are forbidden.
- Metal parts in contact with the contents must not contain more than 65 per cent copper.
- When steel cylinders are used, only those bearing the "H" mark are permitted.

- 5) Gas mixtures containing any of the following gases must not be offered for transport in aluminium alloy cylinders unless approved by the appropriate national authority of the State of Origin:

UN 1037 **Ethyl chloride**  
 UN 1063 **Methyl chloride**  
 UN 1063 **Refrigerant gas R 40**  
 UN 1085 **Vinyl bromide, stabilized**  
 UN 1086 **Vinyl chloride, stabilized**  
 UN 1860 **Vinyl fluoride, stabilized**  
 UN 1912 **Methyl chloride and methylene chloride mixture**

Gas specific provisions:

- l) UN 1040 **Ethylene oxide** may also be packed in hermetically sealed glass ampoules (IP.8) or metal inner packagings (IP.3 and IP.3A) suitably cushioned in fibreboard, wooden or metal boxes meeting the Packing Group I performance level. The maximum quantity permitted in any glass inner packaging is 30 g, and the maximum quantity permitted in any metal inner packaging is 200 g. After filling, each inner packaging must be determined to be leak-tight by placing the inner packaging in a hot water bath at a temperature, and for a period of time, sufficient to ensure that an internal pressure equal to the vapour pressure of ethylene oxide at 55°C is achieved. The maximum net mass in any outer packaging must not exceed 2.5 kg. When cylinders are used, they must be of the seamless or welded steel types that are equipped with suitable pressure relief devices. Each cylinder must be tested for leakage with an inert gas before each refilling and must be insulated with three coats of heat retardant paint or in any equally efficient manner. The maximum net quantity per cylinder must not exceed 25 kg.

m) Cylinders must be filled to a working pressure not exceeding 5 bar.

o) In no case must the working pressure or filling ratio shown in the table be exceeded.

- p) For UN 1001 **Acetylene, dissolved**, and UN 3374 **Acetylene, solvent free**: cylinders must be filled with a homogeneous monolithic porous mass; the working pressure and the quantity of acetylene must not exceed the values prescribed in the approval or in ISO 3807-1:2000 or ISO 3807-2:2000, as applicable.

For UN 1001 **Acetylene, dissolved**, cylinders must contain a quantity of acetone or suitable solvent as specified in the approval (see ISO 3807-1:2000 or ISO 3807-2:2000, as applicable); cylinders fitted with pressure relief devices must be transported vertically.

The test pressure of 52 bar applies only to cylinders conforming to ISO 3807-2:2000.

s) Aluminium alloy cylinders must be:

- Equipped only with brass or stainless steel valves; and
- Cleaned in accordance with ISO 11621:1997 and not contaminated with oil.

Periodic inspection:

- u) The interval between periodic tests may be extended to 10 years for aluminium alloy cylinders when the alloy of the cylinder has been subjected to stress corrosion testing as specified in ISO 7866:1999.

v) The interval between periodic inspections for steel cylinders may be extended to 15 years if approved by the appropriate national authority of the country of use.

- w) Ethyl chloride may be carried in securely sealed glass ampoules (IP.8) containing not more than 5 g of ethyl chloride with a ullage of not less than 7.5 per cent at 21°C. Ampoules must be cushioned with efficient non-combustible material in partitioned cartons with not more than 12 ampoules per carton. The cartons must be tightly packed to prevent movement in wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) that meet the performance testing requirements of 6;4 at the Packing Group II performance level. Not more than 300 g of ethyl chloride is permitted per package.

Requirements for N.O.S. descriptions and for mixtures:

- z) The construction materials of the cylinders and their accessories must be compatible with the contents and must not react to form harmful or dangerous compounds therewith.

The test pressure and filling ratio must be calculated in accordance with the relevant requirements of PI 200.

The necessary steps must be taken to prevent dangerous reactions (i.e. polymerization or decomposition) during transport. If necessary, stabilization or addition of an inhibitor may be required.

*Note.— For the carriage of oxygen to provide life support to aquatic animals, see Note 7 of the Introductory Notes to this Part.*

**201****PACKING INSTRUCTION 201****201**

The general packing requirements of 4;1 must be met.

Hydrocarbon gas-powered small devices, including replacement cartridges, and lighters for cigarettes and lighter refills must comply with the requirements of the country in which they are filled. They must be provided with protection against inadvertent discharge. Lighters must not contain more than 10 g of liquefied petroleum gas. Hydrocarbon gas-powered small devices and lighter refills must not contain more than 65 g of liquefied petroleum gas. The liquid portion of the gas must not exceed 85 per cent of the capacity of the fuel vessel at 15°C. The articles, including closures, must be capable of withstanding an internal pressure of twice the pressure in the fuel vessel at 55°C. Where refill cartridges are in the form of aerosol dispensers, the pressure in the aerosol must not exceed 1 500 kPa at 55°C and the requirements of subparagraphs b) to e) of Packing Instruction 203 must be met. The articles must be tightly packed to prevent inadvertent operation in wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) of Packing Group II. The net quantity of liquefied petroleum gas in each package must not exceed 1 kg on passenger aircraft and 15 kg on cargo aircraft. Articles which meet the above requirements are permitted only when the valve and ignition mechanisms are designed or securely sealed, taped or otherwise fastened to prevent operation or leakage of contents during transport.

Articles permitted under this packing instruction may also include, within the same outer packaging, replacement cartridges exceeding 65 g each, containing liquefied petroleum gas, provided such cartridges comply with all the requirements of Packing Instruction 200, they are not manifolded or connected to the article and they cannot cause the failure or functioning of the article during transport. Such consignments must be carried on cargo aircraft.

#

202

## PACKING INSTRUCTION 202

202

This instruction applies to Class 2 refrigerated liquefied gases in open and closed cryogenic receptacles.

1. Open cryogenic receptacles must be metal or glass vacuum insulated vessels or flasks vented to the atmosphere to prevent any increase in pressure within the package and must be designed and constructed to permit the release of the gas.
2. The use of safety relief valves, check valves, frangible discs or similar devices in the vent lines is not permitted.
3. Receptacles must be equipped with devices which prevent the release of liquid.
4. Fill and discharge openings must be protected against the entry of foreign materials which might increase the internal pressure.
5. The maximum water capacity for metal receptacles is 50 litres and for glass receptacles it is 5 litres.
6. The open receptacle must have a secure base and must be designed so that it will remain stable and will not topple under normal conditions of transport.
7. The glass vessel or flask must be protected by shock absorbent material or structure and placed in a strong outer packaging that permits the release of the gas. The package must be designed so that the upright position of the glass vessel or flask is guaranteed under normal conditions of transport. Packagings must conform to the requirements of 6;3.1 and meet Packing Group II performance test requirements in accordance with 6;4 and be marked in compliance with 6;2.
8. Open cryogenic receptacles are permitted for nitrogen, argon, krypton and xenon refrigerated liquids.

**Closed cryogenic receptacles**

For closed cryogenic receptacles, the general requirements of 4;1 and 4;4 must be met.

Closed cryogenic receptacles constructed as specified in 6;5 are authorized for the transport of refrigerated liquefied gases.

The closed cryogenic receptacles must be so insulated that they do not become coated with frost.

Air, argon, carbon dioxide, helium, krypton, neon, nitrogen, nitrous oxide, oxygen, trifluoromethane and xenon refrigerated liquids may be carried to the extent permitted in these Instructions and in packagings meeting the requirements as set. These requirements also apply to empty packagings unless all parts are at ambient temperatures.

1) Test pressure

Refrigerated liquids must be filled in closed cryogenic receptacles with the following minimum test pressures:

- a) For closed cryogenic receptacles with vacuum insulation, the test pressure must not be less than 1.3 times the sum of the maximum internal pressure of the filled receptacle, including during filling and discharge, plus 100 kPa (1 bar);
- b) For other closed cryogenic receptacles, the test pressure must be not less than 1.3 times the maximum internal pressure of the filled receptacle taking into account the pressure developed during filling and discharge.

2) Degree of filling

For refrigerated liquefied gases the volume of liquid phase at the filling temperature and at a pressure of 100 kPa (1 bar) must not exceed 98 per cent of the water capacity.

3) Pressure-relief devices

Every closed cryogenic receptacle, having a nominal capacity in excess of 550 L, must be provided with at least 2 pressure-relief devices. The pressure-relief device must be of the type that will resist dynamic forces including surge.

Closed cryogenic receptacles, having a nominal capacity of 550 L or less, must be provided with at least 1 pressure-relief device, and may in addition have a frangible disc in parallel with the spring loaded device in order to meet the requirements of 6;5.1.3.6.5. The pressure-relief device must be of the type that will resist dynamic forces including surge.

*Note.— The pressure-relief devices must meet the requirements of 6;5.1.3.6.4 and 6;5.1.3.6.5.*

## 4) Compatibility

Materials used to ensure the leakproofness of the joints or for the maintenance of the closures must be compatible with the contents. In the case of receptacles intended for the transport of oxidizing gases (i.e. with a subsidiary risk of 5.1), these materials must not react with these gases in a dangerous manner.

*Note.— Insulated packagings containing refrigerated liquid nitrogen fully absorbed in a porous material and intended for transport, at low temperature, of non-dangerous products are not subject to these Instructions provided the design of the insulated packaging would not allow the build-up of pressure within the container and would not permit the release of any refrigerated liquid nitrogen irrespective of the orientation of the insulated packaging.*

203

## PACKING INSTRUCTION 203

203

This Instruction applies to UN 1950 and 2037.

The general packing requirements of 4;1 must be met.

Single packagings are not permitted.

***Metal aerosols and non-refillable receptacles containing gas (gas cartridges)***

Non-refillable metal aerosols and non-refillable receptacles containing gas (gas cartridges) must not exceed 1 000 mL capacity.

The following conditions must be met:

- a) the pressure in the receptacle must not exceed 1 500 kPa at 55°C and each receptacle must be capable of withstanding without bursting a pressure of at least 1.5 times the equilibrium pressure of the contents at 55°C;
- b) if the pressure in the receptacle exceeds 970 kPa at 55°C but does not exceed 1 105 kPa at 55°C, an IP.7, IP.7A or IP.7B metal receptacle must be used;
- c) if the pressure in the receptacle exceeds 1 105 kPa at 55°C but does not exceed 1 245 kPa at 55°C, an IP.7A or IP.7B metal receptacle must be used;
- d) if the pressure in the receptacle exceeds 1 245 kPa at 55°C, an IP.7B metal receptacle must be used;
- e) IP.7B metal receptacles having a minimum burst pressure of 1 800 kPa may be equipped with an inner capsule charged with a non-flammable, non-toxic compressed gas to provide the propellant function. In this case, the pressures indicated in a), b), c) or d) do not apply to the pressure within the capsule for an aerosol. The quantity of gas contained in the capsule must be so limited such that the minimum burst pressure of the receptacle would not be exceeded if the entire gas content of the capsule were released into the outer metal receptacle;
- f) the liquid content must not completely fill the closed receptacle at 55°C;
- g) each receptacle exceeding 120 mL capacity must have been heated until the pressure in the receptacle is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect.

***Plastic aerosols (IP.7C)***

≠

Non-refillable plastic aerosols must not exceed 120 mL capacity, except when the propellant is a non-flammable, non-toxic gas and the contents are not dangerous goods in accordance with the provisions of the Technical Instructions, in which case the quantity must not exceed 500 mL.

The following conditions must be met:

- a) the contents must not completely fill the closed receptacle at 55°C;
- b) the pressure in the container may not exceed 970 kPa at 55°C; and
- c) each receptacle must be leak tested in accordance with the provisions of 6;3.2.8.1.6.

**All aerosols**

- a) the valves, if fitted, must be protected by a cap or other suitable means during transport;
- b) receptacles must be tightly packed, so as to prevent movement, in wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) of Packing Group II.

**Y203****PACKING INSTRUCTION Y203****Y203**

This Instruction applies to UN 1950 and 2037.

The requirements of 3;4 must be met.

Single packagings are not permitted.

**COMBINATION PACKAGINGS:****INNER:****Metal aerosols and non-refillable receptacles containing gas (gas cartridges)**

Non-refillable metal aerosols and non-refillable receptacles containing gas (gas cartridges) must not exceed 1 000 mL capacity.

The following conditions must be met:

- a) the pressure in the receptacle must not exceed 1 245 kPa at 55°C and each receptacle must be capable of withstanding without bursting a pressure of at least 1.5 times the equilibrium pressure of the contents at 55°C;
- b) if the pressure in the receptacle exceeds 970 kPa at 55°C but does not exceed 1 105 kPa at 55°C, an IP.7, IP.7A or IP.7B metal receptacle must be used;
- c) if the pressure in the receptacle exceeds 1 105 kPa at 55°C, an IP.7A or IP.7B metal receptacle must be used;
- d) if the pressure in the receptacle exceeds 1 245 kPa at 55°C, an IP.7B metal receptacle must be used;
- e) IP.7B metal receptacles having a minimum burst pressure of 1 800 kPa may be equipped with an inner capsule charged with a non-flammable, non-toxic compressed gas to provide the propellant function. In this case, the pressures indicated in a), b), c) or d) do not apply to the pressure within the capsule for an aerosol. The quantity of gas contained in the capsule must be so limited such that the minimum burst pressure of the receptacle would not be exceeded if the entire gas content of the capsule were released into the outer metal receptacle;
- f) the liquid content must not completely fill the closed receptacle at 55°C;
- g) each receptacle exceeding 120 mL capacity must have been heated until the pressure in the receptacle is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect.

**Plastic aerosols (IP.7C)**

≠ Non-refillable plastic aerosols must not exceed 120 mL capacity, except when the propellant is a non-flammable, non-toxic gas and the contents are not dangerous goods in accordance with the provisions of the Technical Instructions, in which case the quantity must not exceed 500 mL.

The following conditions must be met:

- a) the contents must not completely fill the closed receptacle at 55°C;
- b) the pressure in the container may not exceed 970 kPa at 55°C; and
- c) each receptacle must be leak tested in accordance with the provisions of 6;3.2.8.1.6.

**All aerosols**

- a) the valves, if fitted, must be protected by a cap or other suitable means during transport;
- b) receptacles must be tightly packed, so as to prevent movement, in wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) of Packing Group II.

**204****PACKING INSTRUCTION 204****204**

The general packing requirements of 4;1 must be met.

Aerosols, non-flammable, containing biological products or a medical preparation which will be deteriorated by a heat test, are acceptable in inner non-refillable receptacles not exceeding 575 mL capacity each, providing all the following conditions are met:

- a) the pressure in the aerosol must not exceed 970 kPa at 55°C;
- b) the liquid contents must not completely fill the closed receptacle at 55°C;
- c) one aerosol out of each lot of 500 or less must be heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect;
- d) the valves must be protected by a cap or other suitable means during transport;
- e) aerosols must be tightly packed, so as to prevent movement, in wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) of Packing Group II.

**Y204****PACKING INSTRUCTION Y204****Y204**

The requirements of 3;4 must be met.

Single packagings are not permitted.

**COMBINATION PACKAGINGS:***INNER:*

Aerosols, non-flammable, containing only a non-toxic substance or substances and biological products or a medical preparation which will be deteriorated by a heat test, are acceptable in inner non-refillable receptacles not exceeding 575 mL capacity each, providing all the following conditions are met:

- a) the pressure in the aerosol must not exceed 970 kPa at 55°C;
- b) the liquid contents must not completely fill the closed receptacle at 55°C;
- c) one aerosol out of each lot of 500 or less must be heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect;
- d) the valves must be protected by a cap or other suitable means during transport;
- e) aerosols must be tightly packed, so as to prevent movement, in one of the following boxes:

*OUTER:*

**206****PACKING INSTRUCTION 206****206**

The general packing requirements of 4;1 must be met.

A gas sample may only be accepted for transport as a non-pressurized gas providing it is at a pressure corresponding to ambient atmospheric pressure at the time the containment system is closed and this must not exceed 105 kPa absolute.

Non-pressurized gases must be contained in hermetically sealed glass (IP.1 or IP.8) or metal (IP.3 or IP.3A) inner packagings, the capacities of which do not exceed those shown below:

IP.1: 1 L  
 IP.8: 0.5 L  
 IP.3: 1 L  
 IP.3A: 1 L

except that for "Gas sample, non-pressurized, flammable, n.o.s.", being transported on a cargo aircraft only, the limit for IP.1, IP.3 or IP.3A is increased to 2.5 L.

The inner packaging(s) must be packed so as to prevent movement in steel drums (1A2), aluminium drums (1B2), wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) of Packing Group II.

**208****PACKING INSTRUCTION 208****208**

The general packing requirements of 4;1 must be met.

Articles, pressurized pneumatic or hydraulic containing a non-flammable, non-liquefied and non-toxic gas and constructed from materials which will not fragment under pressure, may be carried under the following conditions:

- a) when installed in construction equipment and assembled machinery, articles must be designed and constructed with a burst pressure of not less than 5 times their charged pressure at 21°C when shipped;

*Note.— Labelling, marking, dangerous goods transport document and information to pilot-in-command are not required.*

- b) when tightly packed to prevent movement in strong outer packagings and charged to not more than 1 380 kPa at 21°C, the following conditions also apply:

- 1) each article must have a fluid space not exceeding 41 L under stored pressure;
- 2) each article must be tested without failure or damage to at least 3 times its charged pressure at 21°C but not less than 830 kPa before initial shipment and before each refilling and re-shipment;

- c) when tightly packed to prevent movement in strong outer packagings and charged with a pressure exceeding 1 380 kPa at 21°C the following conditions also apply:

- 1) each article must have a fluid space not exceeding 41 L under stored pressure;
- 2) each article must be tested without failure or damage to at least 3 times its charged pressure at 21°C, but not less than 830 kPa before initial shipment and before each refilling and re-shipment;
- 3) each article must be designed and constructed with a burst pressure of not less than 5 times its charged pressure at 21°C when shipped.

<b>211</b>	<b>PACKING INSTRUCTION 211</b>	<b>211</b>
<p>The general packing requirements of 4;1 must be met.</p> <p>Refrigerating machines or components containing non-toxic liquefied gases or Ammonia solutions (UN 2672) must meet the following requirements:</p> <ul style="list-style-type: none"> <li>a) each cylinder must not contain more than 450 kg of a Division 2.2 gas without subsidiary risk or 25 kg of Ammonia solutions (UN 2672);</li> <li>b) machines or components having two or more charged cylinders may not contain an aggregate of more than 910 kg of a Division 2.2 gas without subsidiary risk or more than 45 kg of Ammonia solutions (UN 2672);</li> <li>c) each cylinder must be equipped with a safety device meeting the requirements of a recognized national standard;</li> <li>d) each cylinder must be equipped with a shut-off valve at each opening except openings used for safety devices and with no other connection. These valves must be closed prior to and during transport;</li> <li>e) cylinders must be manufactured, inspected and tested in accordance with a recognized UN or national standard;</li> <li>f) all parts subject to refrigerant pressure during shipment must be tested in accordance with a recognized UN or national standard;</li> <li>g) the liquid portion of the refrigerant, if any, must not completely fill any pressure vessel at 55°C;</li> <li>h) the amount of refrigerant, if liquefied, must not exceed the filling density prescribed by applicable State regulations.</li> </ul>		

<b>212</b>	<b>PACKING INSTRUCTION 212</b>	<b>212</b>
<p>The general packing requirements of 4;1 must be met.</p> <p>Aerosols, non-flammable, which are tear gas devices are permitted in inner non-refillable metal receptacles not exceeding 1 000 mL capacity each providing all the following conditions are met:</p> <ul style="list-style-type: none"> <li>a) the pressure in the aerosol must not exceed 1 500 kPa at 55°C and each receptacle must be capable of withstanding without bursting a pressure of at least 1.5 times the equilibrium pressure of the contents at 55°C;</li> <li>b) if the pressure in the aerosol does not exceed 1 105 kPa at 55°C, an IP.7, IP.7A or IP.7B metal receptacle must be used;</li> <li>c) if the pressure in the aerosol exceeds 1 105 kPa at 55°C but does not exceed 1 245 kPa at 55°C, an IP.7A or IP.7B metal receptacle must be used;</li> <li>d) if the pressure in the aerosol exceeds 1 245 kPa at 55°C, an IP.7B metal receptacle must be used;</li> <li>e) IP.7B metal receptacles having a minimum burst pressure of 1 800 kPa may be equipped with an inner capsule charged with a non-flammable, non-toxic compressed gas to provide the propellant function. In this case, the pressures indicated in a), b), c) or d) do not apply to the pressure within the capsule. The quantity of gas contained in the capsule must be so limited such that the minimum burst pressure of the receptacle would not be exceeded if the entire gas content of the capsule were released into an aerosol;</li> <li>f) the liquid content must not completely fill the closed receptacle at 55°C;</li> <li>g) each aerosol must have been heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect;</li> <li>h) the valves must be protected by a cap or other suitable means during transport;</li> <li>i) aerosols must be individually placed into spiral wound tubes fitted with metal ends or a double-faced fibreboard box with suitable padding, which must be tightly packed in wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or plastic boxes (4H1, 4H2) of Packing Group II. Maximum net quantity per package is 50 kg.</li> </ul>		

**213****PACKING INSTRUCTION 213****213**

The general packing requirements of 4;1 must be met.

Fire extinguishers with compressed or liquefied gas must be packed in strong outer packagings so that they cannot be accidentally activated.

Fire extinguishers may include installed actuating cartridges (cartridges, power device of Division 1.4C or 1.4S), without changing the classification of Division 2.2, provided the total quantity of deflagrating (propellant) explosives does not exceed 3.2 g per extinguishing unit.

**214****PACKING INSTRUCTION 214****214**

This Instruction applies to storage systems containing hydrogen absorbed in a metal hydride (UN 3468) individually or when contained in equipment and apparatus when transported on cargo aircraft.

The storage systems must be constructed and marked by the manufacturer indicating they meet the requirements of Annex B of IEC PAS 62282-6-1.

Storage systems employing cylinders other than UN marked and certified cylinders may be used if the design, construction, testing, approval and markings conform to the requirements of the appropriate national authority of the State in which they are approved and filled.

Storage systems for which prescribed periodic tests have become due must not be filled and offered for transport until such retests have been successfully completed.

Storage systems with a water capacity of less than 1 L must be packaged in rigid outer packagings constructed of suitable material of adequate strength and design in relation to the packaging capacity and its intended use. They must be adequately secured or cushioned so as to prevent damage during normal conditions of transport.

Storage systems must be filled in accordance with procedures provided by the manufacturer of the system in accordance with clause B4.17.2 of IEC PAS 62282-6-1.

**PACKING INSTRUCTION 215**

Passenger and cargo aircraft for UN 3478 and 3479 only

**General requirements**

Part 4;1.1.1, 1.1.2 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3478 <b>Fuel cell cartridges</b> containing liquefied flammable gas	1 kg of fuel cell cartridges	15 kg of fuel cell cartridges
UN 3479 <b>Fuel cell cartridges</b> containing hydrogen in metal hydride		

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges must be securely cushioned in the outer packagings.
- Packagings must meet the Packing Group II performance requirements.

**OUTER PACKAGINGS***Boxes*

Aluminium (4B)  
 Fibreboard (4G)  
 Natural wood (4C1, 4C2)  
 Plastic (4H2)  
 Plywood (4D)  
 Reconstituted wood (4F)  
 Steel (4A)

*Drums*

Aluminium (1B2)

 Plastic (1H2)  
 Plywood (1D)  
 Steel (1A2)

*Jerricans*

Steel (3A2)  
 Plastics (3H2)  
 Aluminium (3B2)

**PACKING INSTRUCTION 216**

Passenger and cargo aircraft for UN 3478 and 3479 (contained in equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3478 <b>Fuel cell cartridges contained in equipment</b> , containing liquefied flammable gas	1 kg of fuel cell cartridges	15 kg of fuel cell cartridges
UN 3479 <b>Fuel cell cartridges contained in equipment</b> , containing hydrogen in metal hydride		

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges that are contained in equipment must be protected against short circuit and the equipment must be protected against inadvertent operation.
- Equipment must be securely cushioned in the outer packagings.
- Fuel cell systems must not charge batteries during transport.
- On passenger aircraft, each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1 or a standard approved by the appropriate authority of the State of Origin.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

+

**PACKING INSTRUCTION 217**

Passenger and cargo aircraft for UN 3478 and 3479 (packed with equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3478 <b>Fuel cell cartridges packed with equipment</b> , containing liquefied flammable gas	1 kg of fuel cell cartridges	15 kg of fuel cell cartridges
UN 3479 <b>Fuel cell cartridges packed with equipment</b> , containing hydrogen in metal hydride		

**ADDITIONAL PACKING REQUIREMENTS**

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus 2 spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

## Chapter 5

### CLASS 3 — FLAMMABLE LIQUIDS

#### 5.1 PACKING INSTRUCTIONS

301	PACKING INSTRUCTION 301	301
<p>The general packing requirements of 4;1 must be met.</p> <p>Aircraft hydraulic power unit fuel tanks containing a mixture of anhydrous hydrazine and methyl hydrazine (M86 fuel) and designed for installation as complete units in aircraft are acceptable, subject to either of the following conditions:</p> <ol style="list-style-type: none"> <li>a) the unit must consist of an aluminium pressure vessel made from tubing and having welded heads. Primary containment of the fuel within this vessel must consist of a welded aluminium bladder having a maximum internal volume of 46 L. The outer vessel must have a minimum design gauge pressure of 1 275 kPa and a minimum burst gauge pressure of 2 755 kPa. Each vessel must be leak-checked during manufacture and before shipment and must be found leakproof. The complete inner unit must be securely packed in non-combustible cushioning material, such as vermiculite, in a strong outer tightly closed metal packaging which will adequately protect all fittings. Maximum quantity of fuel per unit and package is 42 L; or</li> <li>b) the unit must consist of an aluminium pressure vessel. Primary containment of the fuel within this vessel must consist of a welded hermetically sealed fuel compartment with an elastomeric bladder having a maximum internal volume of 46 L. The pressure vessel must have a minimum design gauge pressure of 2 860 kPa and a minimum burst gauge pressure of 5 170 kPa. Each vessel must be leak-checked during manufacture and before shipment and must be found leakproof. The complete inner unit must be securely packed in non-combustible cushioning material, such as vermiculite, in a strong outer tightly closed metal packaging which will adequately protect all fittings. Maximum quantity of fuel per unit and package is 42 L.</li> </ol>

**PARTICULAR PACKING REQUIREMENTS:**

- 2 Plastic inner packagings must be packed in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 3 Pure aluminium or aluminium alloys are permitted only for halogenated hydrocarbons that will not react with aluminium.
- 5 Steel packagings must be corrosion-resistant or with protection against corrosion.
- 13 Glass or earthenware inner packagings and glass ampoules must be packed with absorbent material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.

**309****PACKING INSTRUCTION 309****309**

The general packing requirements of 4;1 must be met.

If the substance has a subsidiary corrosive risk, all of these packagings must meet Packing Group II performance requirements.

**COMBINATION PACKAGINGS:***INNER:*

Glass or earthenware (IP.1)	2.5 L

**PACKING INSTRUCTION 374**

Passenger and cargo aircraft for UN 3473 only

**General requirements**

Part 4;1.1.1, 1.1.2 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3473 Fuel cell cartridges	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges must be securely cushioned in the outer packagings.
- Packagings must meet the Packing Group II performance requirements.

**OUTER PACKAGINGS***Boxes*

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastic (4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

**PACKING INSTRUCTION 375**

Passenger and cargo aircraft for UN 3473 (contained in equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3473 Fuel cell cartridges contained in equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges that are contained in equipment must be protected against short circuit and the equipment must be protected against inadvertent operation.
- Equipment must be securely cushioned in the outer packagings.
- Fuel cell systems must not charge batteries during transport.
- On passenger aircraft, each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1 or a standard approved by the appropriate authority of the State of Origin.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

+

**PACKING INSTRUCTION 376**

Passenger and cargo aircraft for UN 3473 (packed with equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3473 <b>Fuel cell cartridges packed with equipment</b>	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus 2 spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

## Chapter 6

### CLASS 4 — FLAMMABLE SOLIDS; SUBSTANCES LIABLE TO SPONTANEOUS COMBUSTION; SUBSTANCES WHICH, IN CONTACT WITH WATER, EMIT FLAMMABLE GASES

#### 6.1 GENERAL REQUIREMENTS FOR SELF-REACTIVE SUBSTANCES

Unless otherwise provided in these Instructions, the packagings used for self-reactive substances of Division 4.1 must meet Packing Group II requirements. To avoid unnecessary confinement, metal packaging meeting Packing Group I requirements must not be used.

#### 6.2 PACKING INSTRUCTIONS

400	PACKING INSTRUCTION 400	400
<p>Films, nitrocellulose base must be packed in accordance with the general packing requirements of 4;1 and as follows:</p> <ul style="list-style-type: none"> <li>a) in steel drums (1A2), aluminium drums (1B2), aluminium jerricans (3B2), steel jerricans (3A2), aluminium (4B), steel (4A), wooden (4C1, 4C2), plywood (4D) or reconstituted wood (4F) boxes or plywood drums (1D) of Packing Group II with each reel in a tightly closed metal can or strong cardboard or fibreboard inner packaging with cover held in place by adhesive tape or paper; or</li> <li>b) in fibreboard (4G) or solid plastic (4H2) boxes or fibre drums (1G) of Packing Group II with a single tightly closed metal can or strong cardboard or fibreboard inner packaging with cover held in place by adhesive tape or paper; authorized only for not over 600 m of film.</li> </ul>		

Y400	PACKING INSTRUCTION Y400	Y400
<p>The requirements of 3;4 must be met.</p> <p>Single packagings are not permitted.</p> <p><b>COMBINATION PACKAGINGS:</b></p> <p>Films, nitrocellulose base must be packed as follows:</p> <ul style="list-style-type: none"> <li>a) in steel or aluminium drums, aluminium or steel jerricans, aluminium, steel, wooden, plywood or reconstituted wood boxes or plywood drums with each reel in a tightly closed metal can or strong cardboard or fibreboard inner packaging with cover held in place by adhesive tape or paper, up to a maximum net quantity of 1 kg of film in each inner packaging; or</li> <li>b) in fibreboard or solid plastic boxes or fibre drums with a single tightly closed metal can or strong cardboard or fibreboard inner packaging with cover held in place by adhesive tape or paper; authorized only for not over 600 m or 1kg (whichever is the more restrictive) of film in one outer packaging.</li> </ul>		

401	PACKING INSTRUCTION 401	401
<p>The general packing requirements of 4;1 must be met.</p> <p>Nitrocellulose membrane filters must be packed as follows:</p> <ul style="list-style-type: none"> <li>a) in fibreboard (4G) boxes of Packing Group II; or</li> <li>b) in other packagings of Packing Group II, provided that explosion is not possible by reason of increased internal pressure.</li> </ul>		

Y401	PACKING INSTRUCTION Y401	Y401
<p>The requirements of 3;4 must be met.</p> <p>Single packagings are not permitted.</p> <p>Nitrocellulose membrane filters must be packed in tightly closed metal, plastics, or strong cardboard or fibreboard inner packagings. Inner packagings must be securely packed in aluminium or steel drums, aluminium or steel jerricans, aluminium, steel, wooden, plywood, reconstituted wood, fibreboard or plastics boxes, plywood or fibre drums.</p>		

404	PACKING INSTRUCTION 404	404
<p>Matches, safety (book, card or strike on box) must be of a type that will not ignite spontaneously under normal conditions of air transport and can be readily ignited by friction only by striking on the manufacturer's box, book or card. Matches must be packed in accordance with the general packing requirements of 4;1 and be tightly packed to prevent movement within the package and ignition by rubbing against an adjoining box, book or card; they must be securely wrapped in paper or foil, or packed in tightly closed inner packagings. Not more than 50 books of matches may be packed in one inner packaging. Inner packagings must be securely packed in steel drums (1A2), aluminium drums (1B2), steel jerricans (3A2), aluminium jerricans (3B2), steel (4A), aluminium (4B), wooden (4C1, 4C2), plywood (4D), reconstituted wood (4F), fibreboard (4G) or solid plastic (4H2) boxes, plywood (1D) or fibre (1G) drums of Packing Group II. Alternatively, book safety matches only, up to a maximum of 50 books, may be packed in a strong fibreboard carton, which is made of straw-board, covered with kraft paper, having a securely glued inside lining consisting of aluminium foil at least 0.01 mm thick, the carton to have a full depth lid with all joints secured with gummed paper tape; no additional outer packaging is required.</p>		

Y404	PACKING INSTRUCTION Y404	Y404
<p>The requirements of 3;4 must be met.</p> <p>Single packagings are not permitted.</p> <p><b>COMBINATION PACKAGINGS:</b></p> <p>Matches, safety (book, card or strike on box) must be of a type that will not ignite spontaneously under normal conditions of air transport and can be readily ignited by friction only by striking on the manufacturer's box, book or card. **PARTICULAR PACKING REQUIREMENTS:**

- 5 Steel packagings must be corrosion-resistant or with protection against corrosion.
- 9 Glass or earthenware inner packagings and glass ampoules must be packed with cushioning material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 10 Copper cartridges only are permitted when the substance is not in dispersion.
- 22 If the substance is in dispersion in organic liquid, the organic liquid must have a flash point above 50°C.

**413****PACKING INSTRUCTION 413****413**

The general packing requirements of 4;1 must be met.

Glass or earthenware inner packagings and glass ampoules must be packed with absorbent material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.

Single packagings are not permitted.

**COMBINATION PACKAGINGS:***INNER:*

Glass or earthenware (IP.1)	1 L
Plastic (IP.2)	1 L
Metal (IP.3, IP.3A)	2.5 L

**PARTICULAR PACKING REQUIREMENTS:**

- 2 Plastic inner packagings must be packed in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 5 Steel packagings must be corrosion-resistant or with protection against corrosion.
- 9 Glass or earthenware inner packagings and glass ampoules must be packed with cushioning material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 22 If the substance is in dispersion in organic liquid, the organic liquid must have a flash point above 50°C.

**419****PACKING INSTRUCTION 419****419**

The general packing requirements of 4;1 must be met.

All of the following packagings must meet Packing Group II performance requirements.

Single packagings are not permitted.

**COMBINATION PACKAGINGS:***INNER:*

Glass or earthenware (IP.1)	5 kg
Plastic (IP.2)	10 kg
Metal (IP.3, IP.3A)	10 kg
Plastic bag (IP.5)	5 kg
Glass ampoule (IP.8)	0.5 kg

*OUTER:**Boxes*

aluminium (4B) fibreboard (4G) plywood (4D) reconstituted wood (4F) solid plastic (4H2) steel (4A) wooden (4C1, 4C2)	aluminium (1B2) fibre (1G) plastic (1H2) plywood (1D) steel (1A2)	aluminium (3B2) plastic (3H2) steel (3A2)

**SINGLE PACKAGINGS:**

<i>UN No.</i>	<i>Cylinders (as permitted by 4;2.7)</i>
3399	Yes

**PARTICULAR PACKING REQUIREMENTS:**

- 8 Only metal cylinders that meet the requirements of 4;2.7 are permitted.
- 13 Glass or earthenware inner packagings and glass ampoules must be packed with absorbent material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.

**433****PACKING INSTRUCTION 433****433**

Cells must be packed in accordance with the general packing requirements of 4;1 and be in steel drums (1A2), aluminium drums (1B2), plywood drums (1D), fibre drums (1G), plastic drums (1H2), aluminium jerricans (3B2), steel boxes (4A), aluminium boxes (4B), wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or solid plastic boxes (4H2). Packagings must meet Packing Group II requirements. Sufficient cushioning material must be provided to prevent contact between cells, and between cells and the internal surfaces of the outer packagings, and to ensure that no dangerous movement of the cells within the outer packaging occurs in transport.

Batteries may be offered for transport and transported unpacked, or in protective enclosures such as fully enclosed or wooden slatted crates that are not subject to the requirements of Part 6 of these Instructions.

**434****PACKING INSTRUCTION 434****434**

The general packing requirements of 4;1 must be met.

**COMBINATION PACKAGINGS:***INNER:*

Glass or earthenware (IP.1)	0.5 kg
Plastic (IP.2)	1 kg
Plastic bag (IP.5)	1 kg
Glass ampoule (IP.8)	0.5 kg

**PACKING INSTRUCTION 496**

Passenger and cargo aircraft for UN 3476 (contained in equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3476 Fuel cell cartridges contained in equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges that are contained in equipment must be protected against short circuit and the equipment must be protected against inadvertent operation.
- Equipment must be securely cushioned in the outer packagings.
- The mass of each fuel cell cartridge must not exceed 1 kg.
- Fuel cell systems must not charge batteries during transport.
- On passenger aircraft, each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1 or a standard approved by the appropriate authority of the State of Origin.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes**Drums**Jerricans*

Strong outer packagings

+

**PACKING INSTRUCTION 497**

Passenger and cargo aircraft for UN 3476 (packed with equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3476 Fuel cell cartridges packed with equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus two spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.
- The mass of each fuel cell cartridge must not exceed 1 kg.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes**Drums**Jerricans*

Strong outer packagings

+

**499****PACKING INSTRUCTION 499****499**

Only packagings which are approved by the appropriate national authority for these substances may be used (see 4;2.8). A copy of this approval must accompany each consignment or an annotation that it has been granted must be included with the transport document.

## Chapter 7

### CLASS 5 — OXIDIZING SUBSTANCES; ORGANIC PEROXIDES

#### 7.1 GENERAL REQUIREMENTS FOR ORGANIC PEROXIDES

7.1.1 Unless otherwise provided in these Instructions, the packaging used for goods of Division 5.2 must meet Packing Group II requirements. To avoid unnecessary confinement, metal packaging meeting Packing Group I requirements must not be used.

7.1.2 Venting of packages is not permitted for air transport.

7.1.3 The packaging of organic peroxides presenting an explosive subsidiary risk must comply with the provisions of 4;3.2.2 and 4;3.2.3.

#### 7.2 PACKING INSTRUCTIONS

- 5 Steel packagings must be corrosion-resistant or with protection against corrosion.

523

## PACKING INSTRUCTION 523

523

The general packing requirements of 4;1, except for 1.1.12, must be met.

**Oxygen generator, chemical** containing oxidizing substances, including when fitted in associated equipment, e.g. passenger service units (PSUs), portable breathing equipment (PBE), must meet all the following conditions:

- a) the generator, without its packaging, must be capable of withstanding a 1.8 m drop test onto a rigid, non-resilient, flat and horizontal surface, in the position most likely to cause actuation, without loss of its contents and without actuation. For PBE, which are in a vacuum-sealed bag as part of their containment system, this test may be conducted on the PBE in the vacuum-sealed bag;
- b) when a generator is equipped with an actuating device, it must have at least two positive means of preventing unintentional actuation. For PBE, which are in a vacuum-sealed bag as part of their containment system, the vacuum-sealed bag may be considered the second positive means of preventing unintentional actuation;
- c) the generator(s) must be transported in a package which will meet the following requirements when one generator in the package is actuated:
  - 1) other generators in the package will not be actuated;
  - 2) packaging material will not ignite; and
  - 3) the outside surface temperature of the completed package will not exceed 100°C;

*Note. — To enable test c) 1), 2) and 3) to be conducted on PBE, it is acceptable to break the vacuum-sealed bag to actuate the generator before placing it in the package.*

- d) the generator(s) must be tightly packed in steel drums (1A2), aluminium drums (1B2), plywood drums (1D), fibre drums (1G), plastic drums (1H2), steel jerricans (3A2), plastic jerricans (3H2), metal boxes (4A, 4B), wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G) or solid plastic boxes (4H2).

## Chapter 8

### CLASS 6 — TOXIC AND INFECTIOUS SUBSTANCES

#### 8.1 PACKING INSTRUCTIONS

600	PACKING INSTRUCTION 600	600
<p>Ammunition, tear-producing or toxic may be carried provided it is without ignition elements, bursting charges, detonating fuses or other explosive components and when packed according to the general packing requirements of 4;1 and in steel (4A), aluminium (4B) or wooden (4C1, 4C2) boxes, steel drums (1A2) or aluminium drums (1B2) or aluminium jerricans (3B2).</p>		

601	PACKING INSTRUCTION 601	601
<p>Tear gas grenades or candles may be carried when packed according to the general packing requirements of 4;1 and in steel (4A), aluminium (4B) or metal strapped wooden (4C1, 4C2) boxes, steel drums (1A2), aluminium drums (1B2) or aluminium jerricans (3B2). Unless functioning elements are so packed that they cannot accidentally function, elements must not be assembled in grenades or devices, but must be packed in a separate compartment or in a separate wooden (4C1, 4C2) box and so cushioned that they cannot come into contact with each other or with the walls of the packaging during transport. Not more than 24 grenades and 24 functioning devices per package are authorized.</p>		

602	PACKING INSTRUCTION 602	602
<p>This packing instruction applies to UN 2814 and UN 2900.</p> <p>The following packagings are authorized provided the special packing provisions are met.</p> <p>Packagings meeting the requirements of 6;6 and approved accordingly consisting of:</p>		
#	<p>a) inner packagings comprising:</p>	
#	<p>1) leakproof primary receptacle(s);</p>	
#	<p>2) a leakproof secondary packaging;</p>	
#	<p>3) other than for solid infectious substances, an absorbent material in sufficient quantity to absorb the entire contents placed between the primary receptacle(s) and the secondary packaging; if multiple fragile primary receptacles are placed in a single secondary packaging, they shall be either individually wrapped or separated so as to prevent contact between them;</p>	
#	<p>b) a rigid outer packaging. The smallest external dimension must be not less than 100 mm.</p>	
<p>Additional requirements:</p>		
<p>c) Inner packagings containing infectious substances must not be consolidated with inner packagings containing unrelated types of goods. Complete packages may be overpacked in accordance with the provisions of 1;3.1 and 5;2.4.10. Such an overpack may contain dry ice.</p>		
<p>d) Other than for exceptional consignments, e.g. whole organs, which require special packaging, the following additional requirements must apply:</p>		

- 1) Substances consigned at ambient temperatures or at a higher temperature. Primary receptacles must be of glass, metal or plastics. Positive means of ensuring a leakproof seal must be provided, e.g. a heat seal, a skirted stopper or a metal crimp seal. If screw caps are used, they must be secured by positive means, e.g. tape, paraffin sealing tape or manufactured locking closure;
  - 2) Substances consigned refrigerated or frozen. Ice, dry ice or other refrigerant must be placed around the secondary packaging(s) or, alternatively, in an overpack with one or more complete packages marked in accordance with 6;6.3. Interior supports must be provided to secure secondary packaging(s) or packages in position after the ice or dry ice has dissipated. If ice is used, the outer packaging or overpack must be leakproof. If dry ice is used, the outer packaging or overpack must permit the release of carbon dioxide gas. The primary receptacle and the secondary packaging must maintain their integrity at the temperature of the refrigerant used;
  - 3) Substances consigned in liquid nitrogen. Plastic primary receptacles capable of withstanding very low temperature must be used. The secondary packaging must also be capable of withstanding very low temperatures and, in most cases, will need to be fitted over the primary receptacle individually. Provisions for the consignment of liquid nitrogen must also be fulfilled. The primary receptacle and the secondary packaging must maintain their integrity at the temperature of the liquid nitrogen;
  - 4) Lyophilized substances may also be transported in primary receptacles that are flame-sealed glass ampoules or rubberstoppered glass vials fitted with metal seals.
- e) Whatever the intended temperature of the consignment, the primary receptacle or the secondary packaging must be capable of withstanding, without leakage, an internal pressure producing a pressure differential of not less than 95 kPa and temperatures in the range  $-40^{\circ}\text{C}$  to  $+55^{\circ}\text{C}$ .
- + f) Alternative packagings for the transport of animal material may be authorized by the competent authority in accordance with the provisions of 4;2.8.
- + g) A quantity of 30 ml or less of dangerous goods included in Class 3, 8 or 9 may be packed in each primary receptacle containing infectious substances provided these substances meet the requirements of 3;5.

*Note.— The capability of a packaging to withstand an internal pressure without leakage that produces the specified pressure differential should be determined by testing samples of primary receptacles or secondary packagings. Pressure differential is the difference between the pressure exerted on the inside of the receptacle or packaging and the pressure on the outside. The appropriate test method should be selected based on receptacle or packaging type. Acceptable test methods include any method that produces the required pressure differential between the inside and outside of a primary receptacle or a secondary packaging. The test may be conducted using internal hydraulic or pneumatic pressure (gauge) or external vacuum test methods. Internal hydraulic or pneumatic pressure can be applied in most cases as the required pressure differential can be achieved under most circumstances. An external vacuum test is not acceptable if the specified pressure differential is not achieved and maintained. The external vacuum test is a generally acceptable method for rigid receptacles and packagings but is not normally acceptable for:*

- flexible receptacles and flexible packagings;
- receptacles and packagings filled and closed under an absolute atmospheric pressure lower than 95 kPa.

#### **Special packing provisions**

- a) Shippers of infectious substances must ensure that packages are prepared in such a manner that they arrive at their destination in good condition and present no hazard to persons or animals during transport.
  - b) The definition in 1;3, and the general packing requirements of 4;1, apply to infectious substances packages.
  - c) An itemized list of contents must be enclosed between the secondary packaging and the outer packaging. When the infectious substances to be transported are unknown, but suspected of meeting the criteria for inclusion in Category A, the words "suspected Category A infectious substance" must be shown in parentheses following the proper shipping name on the itemized list of contents inside the outer packaging.
- + d) Before an empty packaging is returned to the shipper, or sent elsewhere, it must be disinfected or sterilized to nullify any hazard, and any label or marking indicating that it had contained an infectious substance must be removed or obliterated.

**PARTICULAR PACKING REQUIREMENTS:**

- 2 Plastic inner packagings must be packed in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 3 Pure aluminium or aluminium alloys are permitted only for halogenated hydrocarbons that will not react with aluminium.
- 5 Steel packagings must be corrosion-resistant or with protection against corrosion.
- 13 Glass or earthenware inner packagings and glass ampoules must be packed with absorbent material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.

**Y612****PACKING INSTRUCTION Y612****Y612**

The requirements of 3;4 must be met.

Single packagings are not permitted.

Jerricans  
    plastic (3H1)  
    steel (3A1)

**622****PACKING INSTRUCTION 622****622**

The general packing requirements of 4;1 must be met.

Consignments must be prepared in such a manner that they arrive at their destination in good condition and present no hazard to persons or animals during transport.

Consignments must be packed in steel drums (1A2), aluminium drums (1B2), plywood drums (1D), fibre drums (1G), plastic drums (1H2), steel jerricans (3A2), plastic jerricans (3H2), wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F) or fibreboard boxes (4G). Packagings must meet Packing Group II requirements.

The packaging tests may be those appropriate for solids when there is sufficient absorbent material to absorb the entire amount of liquid present and the packaging is capable of retaining liquids.

In all other circumstances, the packaging tests must be those appropriate for liquids.

Packagings intended to contain sharp objects such as broken glass and needles must be resistant to puncture and retain liquids under the performance test conditions for the packaging.

**650****PACKING INSTRUCTION 650****650**

This packing instruction applies to UN 3373.

- 1) The packaging must be of good quality, strong enough to withstand the shocks and loadings normally encountered during transport, including transshipment between transport units and between transport units and warehouses as well as any removal from a pallet or overpack for subsequent manual or mechanical handling. Packagings must be constructed and closed to prevent any loss of contents that might be caused under normal conditions of transport by vibration or by changes in temperature, humidity or pressure.
- 2) The packaging must consist of three components:
  - a) a primary receptacle;
  - b) a secondary packaging; and
  - c) a rigid outer packaging.
- 3) Primary receptacles must be packed in secondary packagings in such a way that, under normal conditions of transport, they cannot break, be punctured or leak their contents into the secondary packaging. Secondary packagings must be secured in outer packagings with suitable cushioning material. Any leakage of the contents must not compromise the integrity of the cushioning material or of the outer packaging.
- 4) For transport, the mark illustrated below must be displayed on the external surface of the outer packaging on a background of a contrasting colour and must be clearly visible and legible. The mark must be in the form of a square set at an angle of 45° (diamond-shaped) with each side having a length of at least 50 mm, the width of the line must be at least 2 mm, and the letters and numbers must be at least 6 mm high. The proper shipping name "Biological substance, Category B" in letters at least 6 mm high must be marked on the outer packaging adjacent to the diamond-shaped mark.

- 5) At least one surface of the outer packaging must have a minimum dimension of 100 mm × 100 mm.
- 6) The completed package must be capable of successfully passing the drop test in 6;6.5.3 as specified in 6;6.5.2 of the Instructions except that the height of the drop must not be less than 1.2 m. Following the appropriate drop sequence, there must be no leakage from the primary receptacle(s) which must remain protected by absorbent material, when required, in the secondary packaging.
- 7) For liquid substances:
  - a) The primary receptacle(s) must be leakproof and must not contain more than 1 litre;
  - b) The secondary packaging must be leakproof;
  - c) If multiple fragile primary receptacles are placed in a single secondary packaging, they must be either individually wrapped or separated to prevent contact between them;
  - d) Absorbent material must be placed between the primary receptacle(s) and the secondary packaging. The absorbent material must be in quantity sufficient to absorb the entire contents of the primary receptacle(s) so that any release of the liquid substance will not compromise the integrity of the cushioning material or of the outer packaging;
  - e) The primary receptacle or the secondary packaging must be capable of withstanding, without leakage, an internal pressure of 95 kPa (0.95 bar);
  - f) The outer package must not contain more than 4 litres. This quantity excludes ice, dry ice or liquid nitrogen when used to keep specimens cold.

*Note.— The capability of a packaging to withstand an internal pressure without leakage that produces the specified pressure differential should be determined by testing samples of primary receptacles or secondary packagings. Pressure differential is the difference between the pressure exerted on the inside of the receptacle or packaging and the pressure on the outside. The appropriate test method should be selected based on receptacle or packaging type. Acceptable test methods include any method that produces the required pressure differential between the inside and outside of a primary receptacle or a secondary packaging. The test may be conducted using internal hydraulic or pneumatic pressure (gauge) or external vacuum test methods. Internal hydraulic or pneumatic pressure can be applied in most cases as the required pressure differential can be achieved under most circumstances. An external vacuum test is not acceptable if the specified pressure differential is not achieved and maintained. The external vacuum test is a generally acceptable method for rigid receptacles and packagings but is not normally acceptable for:*

— *flexible receptacles and flexible packagings;*

— *receptacles and packagings filled and closed under an absolute atmospheric pressure lower than 95 kPa.*

- 8) For solid substances:
  - a) The primary receptacle(s) must be siftproof and must not exceed the outer packaging mass limit;
  - b) The secondary packaging must be siftproof;
  - c) If multiple fragile primary receptacles are placed in a single secondary packaging, they must be either individually wrapped or separated to prevent contact between them;
  - d) Except for packages containing body parts, organs or whole bodies, the outer package must not contain more than 4 kg. This quantity excludes ice, dry ice or liquid nitrogen when used to keep specimens cold;
  - e) If there is any doubt as to whether or not residual liquid may be present in the primary receptacle during transport, then a packaging suitable for liquids, including absorbent materials, must be used.
- 9) Refrigerated or frozen specimens: ice, dry ice and liquid nitrogen:
  - a) When dry ice or liquid nitrogen is used to keep specimens cold, all applicable requirements of these Instructions must be met. When used, ice or dry ice must be placed outside the secondary packagings or in the outer packaging or an overpack. Interior supports must be provided to secure the secondary packagings in the original position after the ice or dry ice has dissipated. If ice is used, the outside packaging or overpack must be leakproof. If carbon dioxide, solid (dry ice) is used, the packaging must be designed and constructed to permit the release of carbon dioxide gas to prevent a build-up of pressure that could rupture the packagings;
  - b) The primary receptacle and the secondary packaging must maintain their integrity at the temperature of the refrigerant used as well as the temperatures and the pressures which could result if refrigeration were lost.

10) When packages are placed in an overpack, the package markings required by this packing instruction must either be clearly visible or the markings must be reproduced on the outside of the overpack and the overpack must be marked with the word "Overpack".

11) Infectious substances assigned to UN 3373 which are packed and marked in accordance with this packing instruction are not subject to any other requirement in these Instructions except for the following:

- a) the name and address of the shipper and of the consignee must be provided on each package;
- b) the name and telephone number of a person responsible must be provided on a written document (such as an air waybill) or on the package;
- c) classification must be in accordance with 2;6.3.2;
- d) the incident reporting requirements in 7;4.4 must be met;
- e) the inspection for damage or leakage requirements in 7;3.1.3 and 7;3.1.4; and
- f) passengers and crew members are prohibited from transporting infectious substances either as, or in, carry-on baggage or checked baggage or on their person.

*Note.— When the shipper or consignee is also the "person responsible" as referred to in b), the name and address need be marked only once in order to satisfy the name and marking provisions in both a) and b).*

12) Clear instructions on filling and closing such packages must be provided to the shipper or to the person who prepares the package (e.g. patient) by packaging manufacturers and subsequent distributors to enable the package to be correctly prepared for transport.

13) Other dangerous goods must not be packed in the same packaging as Division 6.2 infectious substances unless they are necessary for maintaining the viability, stabilizing or preventing degradation or neutralizing the hazards of the infectious substances. A quantity of 30 ml or less of dangerous goods included in Class 3, 8 or 9 may be packed in each primary receptacle containing infectious substances provided these substances meet the requirements of 3;5. When these small quantities of dangerous goods are packed with infectious substances in accordance with this packing instruction no other requirements in these Instructions need be met.

**Additional requirements:**

1) Alternative packagings for the transport of animal material may be authorized by the competent authority in accordance with the provisions of 4;2.8.

**PACKING INSTRUCTION 699**

Passenger and cargo aircraft for UN 3123 and UN 3125 only

Only packagings which are approved by the appropriate national authority for these substances may be used (see 4;2.8). A copy of this approval must accompany each consignment or an annotation that it has been granted must be included with the transport document.

≠

## Chapter 9

### CLASS 7 — RADIOACTIVE MATERIAL

*Parts of this Chapter are affected by State Variations CA 1, CA 2, CA 4, JP 2, JP 17; see Table A-1*

#### 9.1 GENERAL

9.1.1 Radioactive material, packagings and packages must meet the requirements of 6;7. The quantity of radioactive material in a package must not exceed the limits specified in 2;7.2.4. The types of packages for radioactive materials covered by these Instructions are:

- a) Excepted package (see 1;6.1.5);
- b) Industrial package Type 1 (Type IP-1 package);
- c) Industrial package Type 2 (Type IP-2 package);
- d) Industrial package Type 3 (Type IP-3 package);
- e) Type A package;
- f) Type B(U) package;
- g) Type B(M) package;
- h) Type C package.

Packages containing fissile material or uranium hexafluoride are subject to additional requirements.

9.1.2 The non-fixed contamination on the external surfaces of any package must be kept as low as practicable and, under routine conditions of transport, must not exceed the following limits:

- a) 4 Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters; and
- b) 0.4 Bq/cm<sup>2</sup> for all other alpha emitters.

These limits are applicable when averaged over any area of 300 cm<sup>2</sup> of any part of the surface.

9.1.3 A package, other than an excepted package, must not contain any other items except such articles and documents as are necessary for the use of the radioactive material. This requirement must not preclude the transport of low specific activity material or surface contaminated objects with other items. The transport of such articles and documents in a package, or of low specific activity material or surface contaminated objects with other items may be permitted provided that there is no interaction between them and the packaging or its radioactive contents that would reduce the safety of the package.

9.1.4 Except as provided in 7;3.2.5, the level of non-fixed contamination on the external and internal surfaces of overpacks and freight containers, must not exceed the limits specified in 9.1.2.

9.1.5 Radioactive material meeting the criteria of other Classes or Divisions as defined in Part 2 must be allocated to Packing Group I, II or III, as appropriate, by the application of the grouping criteria provided in Part 2 corresponding to the nature of the predominant subsidiary risk. It must also be capable of meeting the appropriate packaging performance criteria for the subsidiary risk.

9.1.6 Before the first shipment of any package, the following requirements must be fulfilled:

- a) If the design pressure of the containment system exceeds 35 kPa (gauge), it must be ensured that the containment system of each package conforms to the approved design requirements relating to the capability of that system to maintain its integrity under that pressure;
- b) For each Type B(U), Type B(M) and Type C package and for each package containing fissile material, it must be ensured that the effectiveness of its shielding and containment and, where necessary, the heat transfer characteristics and the effectiveness of the confinement system, are within the limits applicable to or specified for the approved design;

- c) For packages containing fissile material, where, in order to comply with the requirements of 6;7.10.1 neutron poisons are specifically included as components of the package, checks must be performed to confirm the presence and distribution of those neutron poisons.

9.1.7 Before each shipment of any package, the following requirements must be fulfilled:

- a) For any package it must be ensured that all the requirements specified in the relevant provisions of these Instructions have been satisfied;
- b) It must be ensured that lifting attachments which do not meet the requirements of 6;7.1.2 have been removed or otherwise rendered incapable of being used for lifting the package, in accordance with 6;7.1.3;
- c) For each package requiring competent authority approval, it must be ensured that all the requirements specified in the approval certificates have been satisfied;
- d) Each Type B(U), Type B(M) and Type C package must be held until equilibrium conditions have been approached closely enough to demonstrate compliance with the requirements for temperature and pressure unless an exemption from these requirements has received unilateral approval;
- e) For each Type B(U), Type B(M) and Type C package, it must be ensured by inspection and/or appropriate tests that all closures, valves, and other openings of the containment system through which the radioactive contents might escape are properly closed and, where appropriate, sealed in the manner for which the demonstrations of compliance with the requirements of 6;7.7.7 and 6;7.9.3 were made;
- f) For each special form radioactive material, it must be ensured that all the requirements specified in the approval certificate and the relevant provisions of these Instructions have been satisfied;
- g) For packages containing fissile material, the measurement specified in 6;7.10.4 b) and the tests to demonstrate closure of each package as specified in 6;7.10.7 must be performed where applicable;
- h) For each low dispersible radioactive material, it must be ensured that all the requirements specified in the approval certificate and the relevant provisions of these Instructions have been satisfied.

9.1.8 The shipper must also have a copy of any instructions with regard to the proper closing of the package and any preparation for shipment before making any shipment under the terms of the certificates.

9.1.9 Except for consignments under exclusive use, the transport index of any package or overpack must not exceed 10, nor must the criticality safety index of any package or overpack exceed 50.

9.1.10 Except for packages or overpacks transported under exclusive use and special arrangement under the conditions specified in 7;2.9.5.3, the maximum radiation level at any point on any external surface of a package or overpack must not exceed 2 mSv/h.

9.1.11 The maximum radiation level at any point on any external surface of a package or overpack under exclusive use must not exceed 10 mSv/h.

## **9.2 REQUIREMENTS AND CONTROLS FOR TRANSPORT OF LSA MATERIAL AND SCO**

9.2.1 The quantity of LSA material or SCO in a single Industrial package Type 1 (Type IP-1), Industrial package Type 2 (Type IP-2), or Industrial package Type 3 (Type IP-3), must be so restricted that the external radiation level at 3 m from the unshielded material does not exceed 10 mSv/h.

9.2.2 LSA material and SCO which is or contains fissile material must meet the applicable requirements in 7;2.9.4.1, 7;2.9.4.2 and 6;7.10.1.

9.2.3 LSA material and SCO in groups LSA-I and SCO-I must not be transported unpackaged.

9.2.4 LSA material and SCO must be packaged in accordance with Table 4-2.

## **9.3 PACKAGES CONTAINING FISSILE MATERIAL**

Unless not classified as fissile in accordance with 2;7.2.3.5, packages containing fissile material must not contain:

- a) a mass of fissile material different from that authorized for the package design;

- b) any radionuclide or fissile material different from those authorized for the package design; or
- c) contents in a form or physical or chemical state, or in a spatial arrangement, different from those authorized for the package design;

as specified in their certificates of approval, where appropriate.

**Table 4-2. Industrial package requirements for LSA material and SCO**

<i>Radioactive contents</i>	<i>Industrial package type</i>	
	<i>Exclusive use</i>	<i>Not under exclusive use</i>
LSA-I Solid Liquid	Type IP-1 Type IP-1	Type IP-1 Type IP-2
LSA-II Solid Liquid and gas	Type IP-2 Type IP-2	Type IP-2 Type IP-3
LSA-III	Type IP-2	Type IP-3
SCO-I	Type IP-1	Type IP-1
SCO-II	Type IP-2	Type IP-2

## Chapter 10

### CLASS 8 — CORROSIVE SUBSTANCES

#### 10.1 PACKING INSTRUCTIONS

<b>800</b>	<b>PACKING INSTRUCTION 800</b>	<b>800</b>
<p>Batteries must be packed in accordance with the general packing requirements of 4;1 and be in wooden (4C1, 4C2), plywood (4D), fibreboard (4G) or reconstituted wood (4F) boxes, plywood drums (1D), fibre drums (1G), plastic drums (1H2), plastic jerricans (3H2) or solid plastic boxes (4H2) of Packing Group II and must incorporate an acid/alkali-proof liner of sufficient strength and adequately sealed to positively preclude leakage in the event of spillage. The batteries must be packed so that the fill openings and vents, if any, are upward; they must be incapable of short-circuiting and be securely cushioned in the packagings. The upright position of the package must be indicated on it by the "Package orientation" label shown in 5;3.2.11 b). The words "This side up" or "This end up" may also be displayed on the top of the package.</p> <p>If batteries are shipped as an integral component of assembled equipment, they must be securely installed and fastened in an upright position and protected against contact with other articles so as to prevent short circuits. Batteries must be removed and packed according to this packing instruction if the assembled equipment is likely to be carried in other than an upright position.</p> <p>For batteries, electric storage, packed with battery fluid in the same outer packaging, see UN 2796 and UN 2797.</p>		

<b>801</b>	<b>PACKING INSTRUCTION 801</b>	<b>801</b>
<p>Bombs, smoke may be carried provided they are without ignition elements, bursting charges, detonating fuses or other explosive components and when packed according to the general packing requirements of 4;1 and in wooden (4C1, 4C2), plywood (4D) or reconstituted wood (4F) boxes, or plywood drums (1D).</p>		

<b>802</b>	<b>PACKING INSTRUCTION 802</b>	<b>802</b>
<p>Batteries, dry, containing potassium hydroxide solid must be packed in accordance with the general packing requirements of 4;1 and be in wooden (4C1, 4C2), plywood (4D), fibreboard (4G), solid plastic (4H2) or reconstituted wood (4F) boxes of Packing Group II. The batteries must be securely cushioned in the packagings.</p>		

<b>803</b>	<b>PACKING INSTRUCTION 803</b>	<b>803</b>
<p>The general packing requirements of 4;1 must be met.</p> <p>Mercury must be packed in inner packagings of earthenware or glass (IP.1) or plastic (IP.2) containing not more than 3.5 kg of mercury, or inner packagings which are glass ampoules (IP.8) containing not more than 0.5 kg of mercury, or iron or steel "quicksilver flasks" containing not more than 35 kg of mercury. The inner packagings or flasks must be packed in steel drums (1A2), steel jerricans (3A2), wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G), plastic boxes (4H2), plywood drums (1D) or fibre drums (1G) of Packing Group I. When inner packagings of earthenware, glass or plastic are used they must be packed in the outer packaging with sufficient cushioning material to prevent breakage. Either the inner packagings or the outer packagings must have inner linings or bags of strong leakproof and puncture-resistant material impervious to mercury, completely surrounding the contents, so that the escape of mercury will be prevented irrespective of the position of the package.</p> <p>Mercury may also be packed in a single packaging which may only be a welded steel bottle with an inner vaulted bottom, an opening not exceeding 20 mm and a closure which must be a bolt with a conical thread.</p>		

<b>804</b>	<b>PACKING INSTRUCTION 804</b>	<b>804</b>
<p>Gallium must be packed in accordance with the general packing requirements, for packagings intended to contain liquids, in 4;1.</p> <p>Gallium must be packed in semi-rigid plastic inner packagings (IP.2) of not more than 2.5 kg capacity each. The inner packagings must be individually enclosed in a sealed leakproof bag of strong puncture-resistant material and the bags must be packed in steel drums (1A2), steel jerricans (3A2), wooden boxes (4C1, 4C2), plywood boxes (4D), reconstituted wood boxes (4F), fibreboard boxes (4G), plastic boxes (4H2), plywood drums (1D) or fibre drums (1G) of Packing Group I. The outer packagings must have inner linings of strong leakproof and puncture-resistant material. The bags and linings must be chemically resistant to gallium.</p> <p>When a refrigerant, such as dry ice, is used to maintain gallium in a solid state during transport, the outer packagings may be overpacked in a further strong, water-resistant packaging which contains the refrigerant. If dry ice is used, this packaging must be designed and constructed so as to permit the release of carbon dioxide gas.</p> <p>When a refrigerant is used, all the packagings must be chemically and physically resistant to the effects of the refrigerant and must have impact resistance at the low temperatures produced by that refrigerant.</p>		

<b>805</b>	<b>PACKING INSTRUCTION 805</b>	<b>805</b>
<p>The general packing requirements of 4;1 must be met.</p> <p>a) Except as otherwise provided for in b), manufactured articles or apparatuses of which metallic mercury is a component part, such as manometers, pumps, thermometers, switches, must be in strong outer packagings, having sealed inner liners or bags of strong leakproof and puncture-resistant material impervious to mercury which will prevent the escape of mercury from the package irrespective of its position. Mercury switches and relays are excepted from the requirement for a sealed inner liner or bag providing they are of the totally enclosed leakproof type in sealed metal or plastic units.</p> <p>b) Electron tubes, mercury vapour tubes and similar tubes must be packed as follows:</p> <ol style="list-style-type: none"> <li>1) tubes which are packed in strong outer packagings with all seams and joints sealed with self-adhesive, pressure-sensitive tape which will prevent the escape of mercury from the package, may be accepted up to a total net quantity of 450 g of mercury per package;</li> <li>2) tubes with more than 450 g of mercury are permitted only when packed in strong outer packagings, having sealed inner liners or bags of strong leakproof and puncture-resistant material impervious to mercury which will prevent the escape of mercury from the package irrespective of its position;</li> <li>3) tubes which do not contain more than 5 g of mercury each and which are packed in the manufacturer's original packagings, may be accepted up to a total net quantity of 30 g of mercury per package; and</li> </ol>		

- 4) tubes which are completely jacketed in sealed leakproof metal cases may be accepted in the manufacturer's original packagings.
- c) For electron tubes, mercury vapour tubes and similar tubes the shipper must indicate the quantity of mercury on the dangerous goods transport document.

Thermometers, switches and relays, each containing a total quantity of not more than 15 g of mercury, are excepted from the requirements of these Instructions if they are installed as an integral part of a machine or apparatus and so fitted that shock or impact damage, leading to leakage of mercury, is unlikely to occur under conditions normally incident to transport.

**806****PACKING INSTRUCTION 806****806**

Batteries can be considered as non-spillable provided that they are capable of withstanding the vibration and pressure differential tests given below, without leakage of battery fluid.

*Vibration test:* The battery is rigidly clamped to the platform of a vibration machine and a simple harmonic motion having an amplitude of 0.8 mm (1.6 mm maximum total excursion) is applied. The frequency is varied at the rate of 1 Hz/min between the limits of 10 Hz to 55 Hz. The entire range of frequencies and return is traversed in  $95 \pm 5$  minutes for each mounting position (direction of vibration) of the battery. The battery must be tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for equal time periods.

*Pressure differential test:* Following the vibration test, the battery is stored for six hours at  $24^{\circ}\text{C} \pm 4^{\circ}\text{C}$  while subjected to a pressure differential of at least 88 kPa. The battery must be tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for at least six hours in each position.

Batteries must be protected against short circuits and must be securely packed in strong outer packagings.

*Note.— Non-spillable type batteries which are an integral part of and necessary for the operation of mechanical or electronic equipment must be securely fastened in the battery holder on the equipment and protected in such a manner as to prevent damage and short circuits.*

**807****PACKING INSTRUCTION 807****807**

The general packing requirements of 4;1 must be met.

Single packagings are not permitted.

**PARTICULAR PACKING REQUIREMENTS:**

- 2 Plastic inner packagings must be packed in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 5 Steel packagings must be corrosion-resistant or with protection against corrosion.
- 7 When aluminium or aluminium alloys are used they must be resistant to corrosion.
- 13 Glass or earthenware inner packagings and glass ampoules must be packed with absorbent material in tightly closed metal or rigid plastic receptacles before packing in outer packagings.
- 21 Glass or earthenware inner packagings and glass ampoules are permitted if this item is free from hydrofluoric acid.

**814****PACKING INSTRUCTION 814****814**

The general packing requirements of 4;1 must be met.

Single packagings are not permitted.

**PACKING INSTRUCTION 875**

Passenger and cargo aircraft for UN 3477 (packed with equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3477 Fuel cell cartridges packed with equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus two spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.
- The mass of each fuel cell cartridge must not exceed 1 kg.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes**Drums**Jerricans*

Strong outer packagings

## Chapter 11

### CLASS 9 — MISCELLANEOUS DANGEROUS GOODS

900	PACKING INSTRUCTION 900	900
<p>Vehicles, machines or equipment containing internal combustion engines or batteries must meet the following requirements:</p> <p>a) except as otherwise provided for in this packing instruction, fuel tanks must be drained of fuel and tank caps fitted securely. Special precautions are necessary to ensure complete drainage of the fuel system of vehicles, machines or equipment incorporating internal combustion engines, such as lawn mowers and outboard motors, where such machines or equipment could possibly be handled in other than an upright position. When it is not possible to handle in other than an upright position, vehicles, except those with diesel engines, must be drained of fuel as far as practicable, and if any fuel remains, it must not exceed one-quarter of the tank capacity. Vehicles equipped with diesel engines are excepted from the requirement to drain the fuel tanks, provided that a sufficient ullage space has been left inside the tank to allow fuel expansion without leakage, and the tank caps are tightly closed. A careful check must be made to ensure there are no fuel leakages;</p> <p>b) 1) for flammable gas-powered vehicles, machines or equipment, pressurized vessels containing the flammable gas must be completely emptied of flammable gas. Lines from vessels to gas regulators, and gas regulators themselves, must also be drained of all trace of flammable gas. To ensure that these conditions are met, gas shut-off valves must be left open and connections of lines to gas regulators must be left disconnected upon delivery of the vehicle to the operator. Shut-off valves must be closed and lines reconnected at gas regulators before loading the vehicle aboard the aircraft;</p> <p>or alternatively,</p> <p>2) flammable gas-powered vehicles, machines or equipment that have pressure receptacles (fuel tanks) equipped with electrically operated valves that close automatically in case the power is disconnected, or with manual shut-off valves, may be transported under the following conditions:</p> <p>i) the valves must be in the closed position and in the case of electrically operated valves, power to those valves must be disconnected;</p> <p>ii) after closing the valves, the vehicle, equipment or machinery must be operated until it stops from lack of fuel before being loaded aboard the aircraft;</p> <p>iii) in no part of the closed system must the remaining pressure of compressed gases exceed 5 per cent of the maximum allowable working pressure of the system, or more than 2 000 kPa (20 bar), whichever is the lower;</p> <p>iv) there must not be any residual liquefied gas in the system, including the fuel tank;</p> <p>c) if non-spillable batteries, as defined in Packing Instruction 806, are installed, they must be securely fastened in the battery holder of the vehicle, machine or equipment and be protected in such a manner as to prevent damage and short circuits;</p> <p>d) if spillable batteries are installed, they must be securely fastened in the battery holder of the vehicle, machine or equipment and be protected in such a manner as to prevent damage and short circuits. However, if it is possible for the vehicle, machine or equipment to be handled in such a way that batteries would not remain in their intended orientation, they must be removed and packed according to Packing Instruction 433 or 800 as applicable;</p> <p>e) dangerous goods required for the operation of the vehicle, machine or equipment, such as fire extinguishers, tire inflation canisters, safety devices, must be securely mounted in the vehicle, machine or equipment. Aircraft may also contain other articles and substances which would otherwise be classified as dangerous goods but which are installed in that aircraft in accordance with the pertinent airworthiness requirements and operating regulations. If fitted, life-rafts, emergency escape slides and other inflation devices must be protected such that they cannot be activated accidentally. Vehicles containing dangerous goods identified in Table 3-1 as forbidden on passenger aircraft may only be transported on cargo aircraft;</p> <p>f) in the event that vehicles, machines or equipment containing internal combustion engines are being shipped in a dismantled state such that fuel lines have been disconnected, those fuel lines must be sealed securely;</p>		

- g) vehicles equipped with theft-protection devices, installed radio communications equipment or navigational system must have such devices, equipment or system disabled;
- h) if lithium batteries are installed, they must be of a type that has successfully passed the tests specified in the UN *Manual of Tests and Criteria*, Part III, subsection 38.3, must be securely fastened in the vehicle, machinery or equipment and must be protected in such a manner so as to prevent damage and short circuits; and
- i) if sodium batteries are installed they must conform to the requirements of Special Provision A94, must be securely fastened in the vehicle, machinery or equipment and must be protected in such a manner so as to prevent damage and short circuits.

When internal combustion engines are being shipped separately, all fuel, coolant or hydraulic systems remaining in or on the engine must be drained as far as practicable and all disconnected fluid pipes must be sealed with leakproof caps, which are positively retained.

Replacements for the dangerous goods permitted in a) to i) must not be carried under this packing instruction.

902

## PACKING INSTRUCTION 902

902

Magnetized material will be accepted only when:

- a) devices such as magnetrons and light meters have been packed so that the polarities of the individual units oppose one another;
- b) permanent magnets, where possible, have keeper bars installed;
- c) the magnetic field strength at a distance of 4.6 m from any point on the surface of the assembled consignment:
  - 1) does not exceed 0.418 A/m; or
  - 2) produces a magnetic compass deflection of 2 degrees or less.

+ Magnetized material may be shipped in a unit load device or other type of pallet prepared by a single shipper provided that the shipper has made prior arrangements with the operator. The shipper must provide the operator with written documentation stating the number of packages of magnetized material contained in each unit load device or other type of pallet.

+ *Note.— For loading instructions, see 7;2.10.*

*Determination of shielding requirements*

The magnetic field strength of magnetized materials must be measured using measuring devices having a sensitivity sufficient to measure magnetic fields greater than 0.0398 A/m within a tolerance of plus or minus 5 per cent, or with a magnetic compass sensitive enough to read a 2 degree variation, preferably in 1 degree increments or finer. If the maximum field strength observed at a distance of 2.1 m is less than 0.159 A/m or there is no significant compass deflection (less than 0.5 degree), the article is not restricted as a magnetized material. Methods of determining if a magnetized article meets the definition of a magnetized material include:

- a) When an oersted meter is used, it is placed on one of two points positioned 4.6 m apart and located in an area that is free from magnetic interference other than the earth's magnetic field. The oersted meter is then aligned with the second point and "balanced" to a zero reading. The magnetic article is then placed on the other point and the magnetic field strength is measured by reading the meter while rotating the package 360 degrees in its horizontal plane. If the maximum field strength observed is 0.418 A/m or less, the article is acceptable for air transport. When the maximum field strength exceeds 0.418 A/m, shielding should be applied until a reading of 0.418 A/m or less has been attained.
- b) When a magnetic compass is used as a sensing device, it should be placed on one of two points positioned 4.6 m apart which are aligned in an East/West direction and in an area that is free from any magnetic interference other than the earth's magnetic field. The packaged item to be tested is placed on the other point and rotated 360 degrees in its horizontal plane for indication of compass deflection. When the maximum compass deflection observed is 2 degrees or less, the article is acceptable for air transport. When the maximum compass deflection of an item exceeds 2 degrees, shielding must be applied until the maximum deflection is not more than 2 degrees.

904

## PACKING INSTRUCTION 904

904

#

Solid carbon dioxide (dry ice) in packages when offered for transport by air must be packed in accordance with the general packing requirements of Part 4, Chapter 1 and be in packaging designed and constructed to permit the release of carbon dioxide gas to prevent a build-up of pressure that could rupture the packaging. Arrangements between shipper and operator(s) must be made for each shipment, to ensure that ventilation safety procedures are followed. The dangerous goods transport document requirements of Part 5, Chapter 1 are not applicable provided alternative written documentation is supplied describing the contents. The information required is as follows and should be shown in the following order: UN 1845, (**Dry ice or Carbon dioxide, solid, 9** (the word "Class" may be included prior to the number "9")), the number of packages and the net quantity of dry ice in each package. The information must be included with the description of the goods. The net mass of the **Carbon dioxide, solid (Dry ice)** must be marked on the outside of the package.

Dry ice used as a refrigerant for other than dangerous goods may be shipped in a unit load device or other type of pallet prepared by a single shipper provided that the shipper has made prior arrangements with the operator. In such case, the unit load device, or other type of pallet must allow the venting of the carbon dioxide gas to prevent a dangerous build-up of pressure. The shipper must provide the operator with written documentation stating the total quantity of the dry ice contained in the unit load device or other type of pallet.

*Note.— For loading restrictions see 7;2.11; for special marking requirement see 5;2.4.7.*

905

## PACKING INSTRUCTION 905

905

#

The description "Life-saving appliances, self-inflating" (UN 2990) is intended to apply to life-saving appliances that present a hazard if the self-inflating device is activated accidentally.

Life-saving appliances, such as life-rafts, life vests, aircraft survival kits or aircraft evacuation slides, may only contain the dangerous goods listed below:

- a) Division 2.2 gases must be contained in cylinders which conform to the requirements of the appropriate national authority of the country in which they are approved and filled. Such cylinders may be connected to the life-saving appliance. These cylinders may include installed actuating cartridges (cartridges, power device of Division 1.4C and 1.4S) provided the aggregate quantity of deflagrating (propellant) explosives does not exceed 3.2 grams per unit. When the cylinders are shipped separately, they shall be classified as appropriate for the Division 2.2 gas contained and need not be marked, labelled or described as explosive articles;
- b) signal devices (Class 1), which may include smoke and illumination signal flares; signal devices must be packed in plastic or fibreboard inner packagings;
- c) small quantities of flammable substances, corrosive solids and organic peroxides (Class 3, Class 8, Division 4.1 and 5.2), which may include a repair kit and not more than 30 strike-anywhere matches. The organic peroxide may only be a component of a repair kit and the kit must be packed in strong inner packaging. The strike-anywhere matches must be packed in a cylindrical metal or composition packaging with a screw-type closure and be cushioned to prevent movement;
- d) electric storage batteries (Class 8) and lithium batteries (Class 9); and
- e) first aid kits which may include flammable, corrosive and toxic articles or substances.

The appliances must be packed, so that they cannot be accidentally activated, in strong outer packagings and, except for life vests, the dangerous goods must be in inner packagings packed so as to prevent movement. The dangerous goods must be an integral part of the appliance without which it would not be operational and in quantities which do not exceed those appropriate for the actual appliance when in use.

Passenger restraint systems consisting of a cylinder charged with a non-liquefied, non-flammable compressed gas and no more than two actuating cartridges per passenger restraint system that meet the requirements of the State of Manufacture must be packed in strong outer packagings so they cannot be accidentally activated.

Life-saving appliances may also include articles and substances not subject to these Instructions which are an integral part of the appliance.

**908****PACKING INSTRUCTION 908****908**

The general packing requirements of 4;1 must be met.

Polymeric beads or granules, expandable, impregnated with flammable gas or liquid as a blowing agent and plastic moulding materials in dough, sheet or extruded rope form must be packed in wooden (4C1, 4C2), plywood (4D), fibreboard (4G) or reconstituted wood (4F) boxes with sealed inner plastic liner, plywood drums (1D), fibre drums (1G) with sealed inner plastic liner or in metal (1A1, 1A2, 1B1, 1B2) packagings.

*Note.*— For loading restrictions see 7;2.12.

**909****PACKING INSTRUCTION 909****909**

The general packing requirements of 4;1 must be met.

Ammonium nitrate fertilizers (UN 2071) must be carried in:

- a) rigid, siftproof packagings (1A2, 1B2, 3A2, 1D, 1G, 1H2, 3H2 or 4C2); or
- b) 5L2, 5L3, 5H2, 5H3 or 5H4 bags.

White asbestos (UN 2590) must be carried in:

- a) rigid, siftproof packagings (1A2, 1B2, 3A2, 1D, 1G, 1H2, 3H2, 4C2, 4D, 4G, 4F, 4H1 or 4H2); or
- b) 5L2, 5L3, 5H2, 5H3 or 5H4 bags, which must be palletized and unitized by methods such as shrink-wrapping in plastic film or wrapping in fibreboard secured by strapping.

**Y909****PACKING INSTRUCTION Y909****Y909**

The requirements of 3;4 must be met.

Single packagings are not permitted.

**910****PACKING INSTRUCTION 910****910**

Consumer commodities are materials that are packaged and distributed in a form intended or suitable for retail sale for purposes of personal care or household use. These include items administered or sold to patients by doctors or medical administrations. Except as otherwise provided below, dangerous goods packed in accordance with this packing instruction do not need to comply with 4;1 or Part 6 of these Instructions; they must, however, comply with all other applicable requirements.

- a) Each packaging must be designed and constructed to prevent leakage that may be caused by changes in altitude and temperature during air transport.
- b) Inner packagings that are breakable (such as earthenware, glass or brittle plastic) must be packed to prevent breakage and leakage under conditions normally incident to transport. These completed packagings must be capable of withstanding a 1.2 m drop on solid concrete in the position most likely to cause damage.
- c) When filling receptacles for liquids, sufficient ullage (outage) must be left to ensure that neither leakage nor permanent distortion of the receptacle will occur as a result of an expansion of the liquid caused by temperatures likely to prevail during transport. Unless specific requirements are prescribed in national rules or international agreements, liquids must not completely fill a receptacle at a temperature of 55°C. At this temperature a minimum ullage of 2 per cent should be left. The primary packaging (which may include composite packaging), for which retention of the liquid is a basic function, must be capable of withstanding, without leakage, an internal pressure which produces a pressure differential of not less than 75 kPa or a pressure related to the vapour pressure of the liquid to be conveyed, whichever is the greater. The pressure related to the vapour pressure must be determined by the method shown in 4;1.1.6. Tests on sample receptacles must be carried out to demonstrate the capability of the primary packaging to withstand the above pressure.
- d) Stoppers, corks or other such friction-type closures must be held securely, tightly and effectively in place by positive means. The closure device must be so designed that it is extremely improbable that it can be incorrectly or incompletely closed and must be such that it may be easily checked to determine that it is completely closed.
- ≠ e) Inner packagings must be tightly packed in strong outer packagings and must be so packed, secured or cushioned as to prevent any breakage, puncture or leakage of contents into the outer packaging(s) during normal conditions of transport. Absorbent material must be provided for glass or earthenware inner packaging(s) containing consumer commodities in Class 2 or 3 or liquids of Division 6.1, in sufficient quantity to absorb the liquid contents of the largest of such inner packagings contained in the outer packaging. Absorbent and cushioning material must not react dangerously with the contents of the inner packagings. Notwithstanding the above, absorbent material may not be required if the inner packagings are so protected that breakage of the inner packagings and leakage of their contents from the outer packaging will not occur during normal conditions of transport.
- + f) Inner packagings containing liquids, excluding flammable liquids in inner packagings of 120 mL or less, must be packed with their closures upward and the upright position of the package must be indicated by "Package orientation" labels (Figure 5-26). These labels, or pre-printed package orientation labels meeting the same specification as either Figure 5-26 or ISO Standard 780-1997, must be affixed to, or printed on, at least two opposite vertical sides of the package with the arrows pointing in the correct direction.
- g) Each completed package as prepared for shipment must not exceed a gross mass of 30 kg G.
- h) Class 2 substances must be further limited to aerosol products containing non-toxic compressed or liquefied gas(es) that are necessary to expel liquids, powders or pastes, packed in inner non-refillable non-metal receptacles not exceeding 120 mL capacity each, or in inner non-refillable metal receptacles not exceeding 820 mL capacity each (except that flammable aerosols must not exceed 500 mL capacity each), subject in either case to the following provisions:

- 1) the pressure in the aerosol must not exceed 1 500 kPa at 55°C and each receptacle must be capable of withstanding without bursting a pressure of at least 1.5 times the equilibrium pressure of the contents at 55°C;
  - 2) if the pressure in the aerosol exceeds 970 kPa at 55°C but does not exceed 1 105 kPa at 55°C, an inner IP.7, IP.7A or IP.7B metal receptacle must be used;
  - 3) if the pressure in the aerosol exceeds 1 105 kPa at 55°C but does not exceed 1 245 kPa at 55°C, an IP.7A or IP.7B metal receptacle must be used;
  - 4) if the pressure in the aerosol exceeds 1 245 kPa at 55°C, an IP.7B metal receptacle must be used;
  - 5) IP.7B metal receptacles having a minimum burst pressure of 1 800 kPa may be equipped with an inner capsule charged with a non-flammable, non-toxic compressed gas to provide the propellant function. In this case, the pressures indicated in 1), 2), 3) or 4) do not apply to the pressure within the capsule. The quantity of gas contained in the capsule must be so limited such that the minimum burst pressure of the receptacle would not be exceeded if the entire gas content of the capsule were released into an aerosol;
  - 6) the liquid contents must not completely fill the closed receptacle at 55°C;
  - 7) each aerosol exceeding 120 mL capacity must have been heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect; and
  - 8) the valves must be protected by a cap or other suitable means during transport.
- i) For aerosols containing a biological or medical preparation which will be deteriorated by a heat test and which are non-toxic and non-flammable, packed in inner non-refillable receptacles not exceeding 575 mL capacity each, the following provisions are applicable:
- 1) the pressure in the aerosol must not exceed 970 kPa at 55°C;
  - 2) the liquid contents must not completely fill the closed receptacle at 55°C;
  - 3) one aerosol out of each lot of 500 or less must be heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect; and
  - 4) the valves must be protected by a cap or other suitable means during transport.
- j) Except for aerosols, inner packagings must not exceed:
- 1) 500 mL for liquids; and
  - 2) 500 g for solids.
- ≠ k) Consumer commodities shipped according to these provisions may be shipped in a unit load device or other type of pallet prepared by a single shipper provided they contain no other dangerous goods. The shipper must provide the operator with written documentation stating the number of packages of consumer commodities contained in each unit load device or other type of pallet.
- l) The gross mass on the dangerous goods transport document must be shown as:
- 1) for one package, the actual gross mass of the package;
  - 2) for more than one package, either the actual gross mass of each package or as the average mass of the packages. (For example, if there are 10 packages and the total gross mass of them is 100 kg, the dangerous goods transport document may show this as "average gross mass per package 10 kg".)

≠	<p>Inner packagings containing dangerous goods must not exceed 30 mL for liquids or 100 g for solids and must be protected from other materials in the kit. The total quantity of dangerous goods in any one kit and in any one package must not exceed 1 kg.</p>	
≠	<p>Kits must not be packed with other dangerous goods in the same outer packaging, with the exception of dry ice. If dry ice is used, the requirements in Packing Instruction 904 must be met.</p> <p>Kits must be packed in metal, wooden, plywood, reconstituted wood, fibreboard or plastic boxes.</p>	

916	PACKING INSTRUCTION 916	916
	<p>The general packing requirements of Part 4, Chapter 1 must be met except that the requirements of 4;1.1.2, 4;1.1.8, 4;1.1.10, 4;1.1.13 and 4;1.1.16 do not apply.</p>	
	<p>a) For other than fuel system components, machinery or apparatus may only contain:</p> <ol style="list-style-type: none"> <li>1) dangerous goods permitted under 3;4.1.2; or</li> <li>2) dangerous goods permitted under 3;4.1.2 and magnetized material meeting the requirements of Packing Instruction 902; or</li> </ol>	
+	<p>3) gases of Division 2.2 without subsidiary risk but excluding refrigerated liquefied gases.</p> <p><i>Note.— If machinery or apparatus contains only magnetized material meeting the requirements of Packing Instruction 902, it must be consigned as UN 2807.</i></p> <p>If the machinery or apparatus contains more than one item of dangerous goods, the individual substances must not be capable of reacting dangerously together.</p> <p>“Package orientation” labels (Figure 5-26), or pre-printed orientation labels meeting the same specification as either Figure 5-26 or ISO Standard 780-1997 must be affixed on at least two opposite vertical sides with the arrows pointing in the correct direction only when required to ensure liquid dangerous goods remain in their intended orientation. Irrespective of 5;3.2.10, machinery or apparatus containing magnetized material meeting the requirements of Packing Instruction 902 must also bear the “Magnetized material” label (Figure 5-24).</p> <p>The nature of the containment must be such that:</p> <ol style="list-style-type: none"> <li>a) damage to receptacles containing the dangerous goods during air transport is unlikely; and</li> <li>b) in the event of damage to receptacles containing the dangerous goods, no leakage of the dangerous goods from the machinery or apparatus is possible. A leakproof liner may be required.</li> </ol>	

In addition:

- c) Dangerous goods in machinery or apparatus must be packed in strong outer packagings unless the receptacles containing the dangerous goods are afforded adequate protection by the construction of the machinery or apparatus.
- d) Receptacles containing dangerous goods must be so secured or cushioned as to prevent their breakage or leakage and so as to control their movement within the machinery or apparatus during normal conditions of transport. Cushioning material must not react dangerously with the contents of the receptacles. Any leakage of the contents must not substantially impair the protective properties of the cushioning material.
- e) For Division 2.2 gases, cylinders for gases, their contents and filling ratios must conform to the requirements of PI 200.
- f) The total net quantity of dangerous goods contained in one package, excluding magnetic material, must not exceed the following:
  - 1) 1 kg in the case of solids;
  - 2) 0.5 L in the case of liquids;
  - 3) 0.5 kg in the case of Division 2.2 gases;
 or any combination thereof.
- g) Fuel system components must be emptied of fuel as far as practicable and all openings must be sealed securely. They must be packed:
  - 1) in sufficient absorbent material to absorb the maximum amount of liquid which may possibly remain after emptying. Where the outer packaging is not liquid tight, a means of containing the liquid in the event of leakage must be provided in the form of a leakproof liner, plastic bag or other equally efficient means of containment;
  - 2) in strong outer packagings.

**917****PACKING INSTRUCTION 917****917**

The general packing requirements of 4;1 must be met.

Air bag inflators, air bag modules and seat-belt pretensioners must be packed in packagings conforming to the Packing Group III performance level.

The packagings must be designed and constructed to prevent movement of the articles and inadvertent operation during normal conditions of transport. Any pressure vessel must be in accordance with the requirements of the appropriate national authority for the substance(s) contained in the pressure vessel(s).

Air bag inflators, air bag modules and seat-belt pretensioners may also be transported unpackaged on cargo aircraft in dedicated handling devices when transported from where they are manufactured to vehicle assembly plants. When transported in handling devices, the following conditions must be met:

- a) air bag inflators, air bag modules or seat-belt pretensioners as fitted in the handling device must be capable of meeting the test criteria prescribed in Special Provision A115;
- b) the handling device must be completely enclosed; and
- c) each air bag inflator, air bag module or seat-belt pretensioner unit must be secured within the handling device to prevent movement in transport.

&gt;

## PACKING INSTRUCTION 965

Passenger and cargo aircraft for UN 3480

This entry applies to lithium ion or lithium polymer batteries in Class 9 (Section I) and lithium ion or lithium polymer batteries subject to specific requirements of these Instructions (Section II).

### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

### General requirements

Part 4;1 requirements must be met.

<i>Contents</i>	<i>Package quantity (Section I)</i>	
	<i>Passenger</i>	<i>Cargo</i>
Lithium ion cells and batteries	5 kg G	35 kg G

### ADDITIONAL PACKING REQUIREMENTS

- Lithium ion cells and batteries must be protected against short circuits.
- Packagings must meet the Packing Group II performance requirements.
- Lithium ion batteries with a mass of 12 kg or greater and having a strong, impact-resistant outer casing, or assemblies of such batteries, may be transported when packed in strong outer packagings and protective enclosures not subject to the requirements of Part 6 of these Instructions, if approved by the appropriate authority of the State of Origin. A copy of the document of approval must accompany the consignment.

### SECTION II

Lithium ion cells and batteries offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium ion cells and batteries may be offered for transport if they meet the following:

- 1) for lithium ion cells, the Watt-hour rating (see Attachment 2) is not more than 20 Wh;
- 2) for lithium ion batteries, the Watt-hour rating is not more than 100 Wh;

- the Watt-hour rating must be marked on the outside of the battery case except for those batteries manufactured before 1 January 2009, which may be transported in accordance with the provisions of this section and without the marking until 31 December 2010;

- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

#### General requirements

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

Contents	Package quantity (Section II)	
	Passenger	Cargo
Lithium ion cells and batteries	10 kg G	10 kg G

#### ADDITIONAL PACKING REQUIREMENTS

- Cells and batteries must be packed in inner packagings that completely enclose the cell or battery.
- Cells and batteries must be protected so as to prevent short circuits. This includes protection against contact with conductive materials within the same packaging that could lead to a short circuit.
- Each package must be capable of withstanding a 1.2 m drop test in any orientation without:
  - damage to cells or batteries contained therein;
  - shifting of the contents so as to allow battery to battery (or cell to cell) contact;
  - release of contents.
- Each package must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium ion cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

### PACKING INSTRUCTION 966

Passenger and cargo aircraft for UN 3481 (packed with equipment) only

This entry applies to lithium ion or lithium polymer batteries packed with equipment in Class 9 (Section I) and lithium ion or lithium polymer batteries packed with equipment subject to specific requirements of these Instructions (Section II).

#### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

**General requirements**

Part 4;1 requirements must be met.

Contents	Package quantity (Section I)	
	Passenger	Cargo
Quantity of lithium ion cells and batteries per overpack, excluding equipment	5 kg	35 kg

**ADDITIONAL PACKING REQUIREMENTS**

- Lithium ion cells and batteries must be protected against short circuits.
- The completed package for the cells or batteries must meet the Packing Group II performance requirements.
- The equipment and the packages of lithium cells or batteries must be placed in an overpack. The overpack must bear applicable marks and labels as set out in Part 5;1 and 5;2.4.10.
- For the purpose of this packing instruction, “equipment” means apparatus requiring the lithium ion batteries with which it is packed for its operation.

**OUTER PACKAGINGS***Boxes*

**SECTION II**

Lithium ion cells and batteries (including lithium polymer) packed with equipment offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium ion cells and batteries may be offered for transport if they meet the following:

- 1) for lithium ion cells, the Watt-hour rating (see Attachment 2) is not more than 20 Wh;
- 2) for lithium ion batteries, the Watt-hour rating is not more than 100 Wh;
  - the Watt-hour rating must be marked on the outside of the battery case except for those batteries manufactured before 1 January 2009, which may be transported in accordance with the provisions of this section and without the marking until 31 December 2010;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

**General requirements**

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

**ADDITIONAL PACKING REQUIREMENTS**

- Cells and batteries must be packed in inner packagings that completely enclose the cell or battery.
- Cells and batteries must be protected so as to prevent short circuits. This includes protection against contact with conductive materials within the same packaging that could lead to a short circuit.
- The maximum number of batteries in each package must be the minimum number required to power the equipment, plus two spares.
- Each package must be capable of withstanding a 1.2 m drop test in any orientation without:
  - damage to cells or batteries contained therein;
  - shifting of the contents so as to allow battery to battery (or cell to cell) contact;
  - release of contents.
- Each package must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium ion cells or batteries;

- the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and

Strong outer packagings

**PACKING INSTRUCTION 967**

Passenger and cargo aircraft for UN 3481 (contained in equipment) only

This entry applies to lithium ion or lithium polymer batteries contained in equipment in Class 9 (Section I) and lithium ion or lithium polymer batteries contained in equipment subject to specific requirements of these Instructions (Section II).

**SECTION I**

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

**General requirements**

Part 4;1 requirements must be met.

<i>Contents</i>	<i>Net quantity per piece of equipment (Section I)</i>	
	<i>Passenger</i>	<i>Cargo</i>
Lithium ion batteries contained in equipment	5 kg	35 kg

**ADDITIONAL PACKING REQUIREMENTS**

- Outer packaging must be waterproof or made waterproof through the use of a liner, such as a plastic bag unless the equipment is made waterproof by nature of its construction.
- The equipment must be secured against movement within the outer packaging and be packed so as to prevent accidental operation during air transport.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

**SECTION II**

Lithium ion cells and batteries (including lithium polymer) contained in equipment offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium ion cells and batteries may be offered for transport if they meet the following:

- 1) for lithium ion cells, the Watt-hour rating (see Attachment 2) is not more than 20 Wh;
- 2) for lithium ion batteries, the Watt-hour rating is not more than 100 Wh;
  - the Watt-hour rating must be marked on the outside of the battery case except for those batteries manufactured before 1 January 2009, which may be transported in accordance with the provisions of this section and without the marking until 31 December 2010;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

#### General requirements

Equipment must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

#### ADDITIONAL PACKING REQUIREMENTS

- The equipment must be equipped with an effective means of preventing accidental activation.
- Cells and batteries must be protected so as to prevent short circuits.
- The equipment must be packed in strong outer packagings constructed of suitable material of adequate strength and design in relation to the packaging's capacity and its intended use unless the battery is afforded equivalent protection by the equipment in which it is contained.
- Each package containing more than four cells or more than two batteries installed in equipment must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment with packages bearing the lithium battery handling label must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium ion cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

### PACKING INSTRUCTION 968

Passenger and cargo aircraft for UN 3090

This entry applies to lithium metal or lithium alloy batteries in Class 9 (Section I) and lithium metal or lithium alloy batteries subject to specific requirements of these Instructions (Section II).

#### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

Cells, and batteries containing one or more cells, with a liquid cathode containing sulphur dioxide, sulphuryl chloride or thionyl chloride which have been discharged to the extent that the open circuit voltage is less than the lower of:

- a) two volts; or
- b) two-thirds of the voltage of the undischarged cell;

are forbidden from transport.

#### General requirements

Part 4;1 requirements must be met.

Contents	Package quantity (Section I)	
	Passenger	Cargo
Lithium metal cells and batteries	2.5 kg G	35 kg G

#### ADDITIONAL PACKING REQUIREMENTS

- Lithium metal cells and batteries must be protected against short circuits.
- Packagings must meet the Packing Group II performance requirements.
- Lithium batteries with a mass of 12 kg or greater and having a strong, impact-resistant outer casing, or assemblies of such batteries, may be transported when packed in strong outer packagings and protective enclosures not subject to the requirements of Part 6 of these Instructions, if approved by the appropriate authority of the State of Origin. A copy of the document of approval must accompany the consignment.
- For lithium metal cells and batteries prepared for transport on passenger aircraft as Class 9:
  - Cells and batteries offered for transport on passenger aircraft must be packed in intermediate or outer rigid metal packaging.
  - Cells and batteries must be surrounded by cushioning material that is non-combustible and non-conductive, and placed inside an outer packaging.

#### SECTION II

Lithium metal or lithium alloy cells and batteries offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium metal or lithium alloy cells and batteries may be offered for transport if they meet the following:

- 1) for a lithium metal cell, the lithium content is not more than 1 g;
- 2) for a lithium metal or lithium alloy battery, the aggregate lithium content is not more than 2 g;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

#### General requirements

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

Contents	Package quantity (Section II)	
	Passenger	Cargo

**SECTION II**

Lithium metal cells and batteries packed with equipment offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium metal cells and batteries may be offered for transport if they meet the following:

- 1) for a lithium metal cell, the lithium content is not more than 1 g;
- 2) for a lithium metal or lithium alloy battery, the aggregate lithium content is not more than 2 g;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

**General requirements**

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

**ADDITIONAL PACKING REQUIREMENTS**

- Cells and batteries must be packed in inner packagings that completely enclose the cell or battery.
- Cells and batteries must be protected so as to prevent short circuits. This includes protection against contact with conductive materials within the same packaging that could lead to a short circuit.
- The maximum number of batteries in each package must be the minimum number required to power the equipment, plus two spares.
- Each package must be capable of withstanding a 1.2 m drop test in any orientation without:
  - damage to cells or batteries contained therein;
  - shifting of the contents so as to allow battery to battery (or cell to cell) contact;
  - release of contents.
- Each package must be labelled with a lithium battery handling label (Figure 5-31).

- Each consignment must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium metal cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

### PACKING INSTRUCTION 970

Passenger and cargo aircraft for UN 3091 (contained in equipment) only

This entry applies to lithium metal or lithium alloy batteries contained in equipment in Class 9 (Section I) and lithium metal or lithium alloy batteries contained in equipment subject to specific requirements of these Instructions (Section II).

#### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the *UN Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

Cells, and batteries containing one or more cells, with a liquid cathode containing sulphur dioxide, sulphuryl chloride or thionyl chloride which have been discharged to the extent that the open circuit voltage is less than the lower of:

- a) two volts; or
- b) two-thirds of the voltage of the undischarged cell;

are forbidden from transport.

#### General requirements

Part 4;1 requirements must be met.

Package contents	Net quantity per piece of equipment (Section I)	
	Passenger	Cargo
Lithium metal batteries	5 kg	35 kg

#### ADDITIONAL PACKING REQUIREMENTS

- Outer packaging must be waterproof or made waterproof through the use of a liner, such as a plastic bag unless the equipment is made waterproof by nature of its construction.
- The equipment must be secured against movement within the outer packaging and be packed so as to prevent accidental operation during air transport.
- The quantity of lithium metal contained in any piece of equipment must not exceed 12 g per cell and 500 g per battery.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packaging

**SECTION II**

Lithium metal cells and batteries contained in equipment offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium metal cells and batteries may be offered for transport if they meet the following:

- 1) for a lithium metal cell, the lithium content is not more than 1 g;
- 2) for a lithium metal or lithium alloy battery, the aggregate lithium content is not more than 2 g.
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

**General requirements**

Equipment containing batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

**ADDITIONAL PACKING REQUIREMENTS**

- The equipment must be equipped with an effective means of preventing accidental activation.
- Cells and batteries must be protected so as to prevent short circuits.
- The equipment must be packed in strong outer packagings constructed of suitable material of adequate strength and design in relation to the packaging's capacity and its intended use unless the battery is afforded equivalent protection by the equipment in which it is contained.
- Each package containing more than four cells or more than two batteries installed in equipment must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment with packages bearing the lithium battery handling label must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium metal cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

**Part 5**  
**SHIPPER'S RESPONSIBILITIES**

## Chapter 1

### GENERAL

*Parts of this Chapter are affected by State Variations AU 2, AU 3, BE 4, CA 1, CA 4, CA 14, CA 15, CA 16, CH 3, DE 1, DE 2, FR 3, FR 4, GB 1, GB 6, HK 3, IN 2, IN 3, IR 2, IT 1, IT 2, IT 5, JP 2, JP 8, MY 1, MY 2, MY 3, NL 3, UA 1, US 10; see Table A-1*

*Note.— It is the shipper's responsibility to ensure that all of the applicable air transport requirements are met. The items indicated below are provided as examples and do not include a complete list of all the applicable requirements for air transport.*

#### 1.1 GENERAL REQUIREMENTS

Before a person offers any package or overpack of dangerous goods for transport by air that person must ensure that:

- a) the articles or substances are not prohibited for transport by air (see Part 1, Chapter 2);
- b) the goods are properly classified, marked and labelled and otherwise in a condition for transport as required by these Instructions;
- c) the dangerous goods are packaged in compliance with all the applicable air transport requirements including:
  - inner packaging and the maximum quantity per package limits;
  - appropriate types of packaging according to the packing instructions;
  - other applicable requirements indicated in the packing instructions including:
    - single packagings may be forbidden;
    - only inner and outer packagings indicated in the packing instructions are permitted;
    - inner packaging may need to be packed in intermediate packagings; and
    - certain dangerous goods must be transported in packagings meeting a higher performance level.
  - appropriate closure procedures for inner and outer packagings (see 4;1.1.4);
  - the compatibility requirements such as those in the particular packing requirements of the packing instructions and in Part 4, Chapter 1;
  - the absorbent material requirements in 4;1.1.10.1 and in the packing instructions when applicable; and
  - the pressure differential requirement in 4;1.1.6.
- d) the dangerous goods transport document has been properly executed and the declaration signed;
- e) an overpack is used for packages bearing the "Cargo aircraft only" label only if:
  - 1) the packages are assembled in such a way that clear visibility and easy access to them is possible; or
  - 2) the packages are not required to be accessible under 7;2.4.1; or
  - 3) not more than one package is involved;
- f) the overpack does not contain packages of dangerous goods which require segregation according to Table 7-1;
- g) the dangerous goods are not included in any freight container/unit load device except for radioactive material as specified in 7;2.9 (subject to the approval of the operator, this does not apply to a unit load device containing consumer commodities prepared according to Packing Instruction 910 or dry ice used as a refrigerant for other than dangerous goods when prepared according to Packing Instruction 904 or magnetized material when prepared according to Packing Instruction 902);
- h) before a package or overpack is reused, all inappropriate dangerous goods labels and markings are removed or completely obliterated; and

- # i) each package contained within an overpack is properly packed, marked, labelled and is free of any indication that its integrity has been compromised and in all respects is properly prepared as required in these Instructions. The “overpack” marking described in 2.4.10 is an indication of compliance with this requirement. The intended function of each package must not be impaired by the overpack.

*Note.— For cooling purposes, an overpack may contain dry ice, provided that the overpack meets the requirements of Packing Instruction 904.*

# **1.2 GENERAL PROVISIONS FOR CLASS 7**

**1.2.1 Approval of shipments and notification**

1.2.1.1 *General*

In addition to the approval for package designs described in Part 6, Chapter 4, multilateral shipment approval is also required in certain circumstances (1.2.1.2 and 1.2.1.3). In some circumstances it is also necessary to notify competent authorities of a shipment (1.2.1.4).

1.2.1.2 *Shipment approvals*

Multilateral approval must be required for:

- a) The shipment of Type B(M) packages not conforming with the requirements of 6;7.6.5;
- b) The shipment of Type B(M) packages containing radioactive material with an activity greater than 3000 A<sub>1</sub> or 3000 A<sub>2</sub>, as appropriate, or 1000 TBq, whichever is the lower;
- c) The shipment of packages containing fissile materials if the sum of the criticality safety indexes of the packages in a single freight container or in an aircraft exceeds 50; and

except that a competent authority may authorize transport into or through its country without shipment approval, by a specific provision in its design approval (see 1.2.2.1).

1.2.1.3 *Shipment approval by special arrangement*

Provisions may be approved by a competent authority under which a consignment, which does not satisfy all of the applicable requirements of these Instructions may be transported under special arrangement (see 1;6.4).

1.2.1.4 *Notifications*

Notification to competent authorities is required as follows:

- a) Before the first shipment of any package requiring competent authority approval, the shipper must ensure that copies of each applicable competent authority certificate applying to that package design have been submitted to the competent authority of each country through or into which the consignment is to be transported. The shipper is not required to await an acknowledgement from the competent authority, nor is the competent authority required to make such acknowledgement of receipt of the certificate;
- b) For each of the following types of shipments:
  - i) Type C packages containing radioactive material with an activity greater than 3000 A<sub>1</sub> or 3000 A<sub>2</sub>, as appropriate, or 1000 TBq, whichever is the lower;
  - ii) Type B(U) packages containing radioactive material with an activity greater than 3000 A<sub>1</sub> or 3000 A<sub>2</sub>, as appropriate, or 1000 TBq, whichever is the lower;
  - iii) Type B(M) packages;
  - iv) Shipment under special arrangement;

the shipper must notify the competent authority of each country through or into which the consignment is to be transported. This notification must be in the hands of each competent authority prior to the commencement of the shipment, and preferably at least 7 days in advance;

- c) The shipper is not required to send a separate notification if the required information has been included in the application for shipment approval;

- d) The consignment notification must include:
- i) sufficient information to enable the identification of the package or packages including all applicable certificate numbers and identification marks;
  - ii) information on the date of shipment, the expected date of arrival and proposed routing;
  - iii) the names of the radioactive material or nuclides;
  - iv) descriptions of the physical and chemical forms of the radioactive material, or whether it is special form radioactive material or low dispersible radioactive material; and
  - v) the maximum activity of the radioactive contents during transport expressed in units of becquerels (Bq) with an appropriate SI prefix symbol (see 1;3.2). For fissile material, the mass of fissile material in units of grams (g), or multiples thereof, may be used in place of activity.

### 1.2.2 Certificates issued by the competent authority

1.2.2.1 Certificates issued by the competent authority are required for the following:

- a) Designs for:
- i) special form radioactive material;
  - ii) low dispersible radioactive material;
  - iii) packages containing 0.1 kg or more of uranium hexafluoride;
  - iv) all packages containing fissile material unless excepted by 6;7.10.2;
  - v) Type B(U) packages and Type B(M) packages;
  - vi) Type C packages;
- b) Special arrangements;
- c) Certain shipments (1.2.1.2).

The certificates must confirm that the applicable requirements are met, and for design approvals, must attribute to the design an identification mark.

The package design and shipment approval certificates may be combined into a single certificate.

Certificates and applications for these certificates must be in accordance with the requirements in 6;7.22.

1.2.2.2 The shipper must be in possession of a copy of each applicable certificate.

1.2.2.3 For package designs where a competent authority issued certificate is not required, the shipper must, on request, make available for inspection by the relevant competent authority, documentary evidence of the compliance of the package design with all the applicable requirements.

### 1.2.3 Determination of transport index (TI) and criticality safety index (CSI)

#### 1.2.3.1 Determination of transport index

1.2.3.1.1 The transport index (TI) for a package, overpack or freight container, must be the number derived in accordance with the following procedure:

- a) Determine the maximum radiation level in units of millisieverts per hour (mSv/h) at a distance of 1 m from the external surfaces of the package, overpack, or freight container. The value determined must be multiplied by 100 and the resulting number is the transport index. For uranium and thorium ores and their concentrates, the maximum radiation level at any point 1 m from the external surface of the load may be taken as:
- 0.4 mSv/h for ores and physical concentrates of uranium and thorium;
  - 0.3 mSv/h for chemical concentrates of thorium;
  - 0.02 mSv/h for chemical concentrates of uranium, other than uranium hexafluoride;

- b) For freight containers, the value determined in step a) above must be multiplied by the appropriate factor from Table 5-1;
- c) The value obtained in steps a) and b) above must be rounded up to the first decimal place (e.g. 1.13 becomes 1.2), except that a value of 0.05 or less may be considered as zero.

1.2.3.1.2 The transport index for each overpack or freight container must be determined as either the sum of the transport indices of all the packages contained, or by direct measurement of radiation level, except in the case of non-rigid overpacks for which the transport index must be determined only as the sum of the transport indices of all the packages.

**Table 5-1. Multiplication factors for freight containers**

<i>Size of load*</i>	<i>Multiplication factor</i>
size of load $\leq 1 \text{ m}^2$	1
$1 \text{ m}^2 < \text{size of load} \leq 5 \text{ m}^2$	2
$5 \text{ m}^2 < \text{size of load} \leq 20 \text{ m}^2$	3
$20 \text{ m}^2 < \text{size of load}$	10
* Largest cross-sectional area of the load being measured.	

1.2.3.1.3 The criticality safety index for each overpack or freight container must be determined as the sum of the CSIs of all the packages contained. The same procedure must be followed for determining the total sum of CSIs in a consignment or aboard an aircraft.

1.2.3.1.4 Packages and overpacks must be assigned to either category I-WHITE, II-YELLOW or III-YELLOW in accordance with the conditions specified in Table 5-2 and with the following requirements:

- a) for a package or overpack, both the transport index and the surface radiation level conditions must be taken into account in determining which is the appropriate category. Where the transport index satisfies the condition for one category but the surface radiation level satisfies the condition for a different category, the package or overpack must be assigned to the higher category. For this purpose, category I-WHITE must be regarded as the lowest category;
- b) the transport index must be determined following the procedures specified in 1.2.3.1.1 and 1.2.3.1.2;
- c) if the surface radiation level is greater than 2 mSv/h, the package or overpack must be transported under exclusive use and under the provisions of 7.2.9.5.3; as appropriate;
- d) a package transported under a special arrangement must be assigned to category III-YELLOW except when otherwise specified in the competent authority approval certificate of the country of origin of design (see 2.7.2.4.6);
- e) an overpack which contains packages transported under special arrangement must be assigned to category III-YELLOW except when otherwise specified in the competent authority approval certificate of the country of origin of design (see 2.7.2.4.6).

**Table 5-2. Categories of packages and overpacks**

<i>Conditions</i>		
<i>Transport index</i>	<i>Maximum radiation level at any point on external surface</i>	<i>Category</i>
0*	Not more than 0.005 mSv/h	I-WHITE
More than 0 but not more than 1*	More than 0.005 mSv/h but not more than 0.5 mSv/h	II-YELLOW
More than 1 but not more than 10	More than 0.5 mSv/h but not more than 2 mSv/h	III-YELLOW
More than 10	More than 2 mSv/h but not more than 10 mSv/h	III-YELLOW**
* If the measured transport index is not greater than 0.05, the value quoted may be zero in accordance with 1.2.3.1.1 c).		
** Must be transported under exclusive use and special arrangement.		

### 1.3 INFORMATION TO EMPLOYEES

A shipper must provide such information to employees as will enable them to carry out their responsibilities with regard to the transport of dangerous goods by air.

### 1.4 TRAINING

Before a consignment of dangerous goods is offered for air transport, all relevant persons involved in its preparation must have received training to enable them to carry out their responsibilities, as detailed in Part 1. Where a shipper does not have trained staff, the “relevant persons” may be interpreted as applying to those employed to act on the shipper’s behalf and to undertake the shipper’s responsibilities in the preparation of the consignment. However, such persons must be trained as required by Part 1, Chapter 4.

### 1.5 SALVAGE PACKAGINGS

Before a person offers any salvage packaging for transport by air, that person must ensure that:

- it is marked with the proper shipping name and UN number of, and bear all the labels appropriate for, the dangerous goods contained therein;
- it is marked with the word “Salvage”;
- the words “Salvage package” are added after the description of the goods in the dangerous goods transport document required by 4.1; and
- where the package contains dangerous goods restricted to transport on cargo aircraft only, it bears a “Cargo aircraft only” label and the dangerous goods transport document contains the necessary statement according to 4.1.5.8.1 b).

In addition, that person must ensure that all other applicable requirements are met.

### 1.6 EMPTY PACKAGINGS

1.6.1 Other than for Class 7, a packaging which previously contained dangerous goods must be identified, marked, labelled and placarded as required for those dangerous goods unless steps such as cleaning, purging of vapours or refilling with a non-dangerous substance are taken to nullify any hazard.

1.6.2 Before an empty packaging which had previously contained an infectious substance is returned to the shipper, or sent elsewhere, it must be disinfected or sterilized to nullify any hazard, and any label or marking indicating that it had contained an infectious substance must be removed or obliterated.

1.6.3 Packagings used for the transport of radioactive material must not be used for the storage or transport of other goods unless decontaminated below the level of 0.4 Bq/cm<sup>2</sup> for beta and gamma emitters and low toxicity alpha emitters and 0.04 Bq/cm<sup>2</sup> for all other alpha emitters.

### 1.7 MIXED PACKING

When two or more dangerous goods are packed within the same outer packaging, the package must be labelled and marked as required for each substance. Labels need not be applied for a subsidiary risk if the hazard is already represented by a primary risk label.

## Chapter 2

### PACKAGE MARKINGS

*Parts of this Chapter are affected by State Variations CA 4, DQ 4, ES 1, HK 2, MY 6, PK 1, US 1, US 7, VC 5, VU 1; see Table A-1*

#### 2.1 THE REQUIREMENT TO MARK

Unless otherwise provided in these Instructions, packages of dangerous goods and overpacks containing dangerous goods offered for transport by air must be marked as required by this Chapter.

#### 2.2 APPLICATION OF MARKINGS

2.2.1 All markings must be so placed on the packagings that they are not covered or obscured by any part of or attachment to the packaging or any other label or marking.

2.2.2 All package markings required by 2.1:

- a) must be durable and printed or otherwise marked on, or affixed to, the external surface of the package;
- b) must be readily visible and legible;
- c) must be able to withstand open weather exposure without a substantial reduction in effectiveness;
- d) must be displayed on a background of contrasting colour; and
- e) must not be located with other package markings that could substantially reduce their effectiveness.

#### 2.3 PROHIBITED MARKING

Arrows for purposes other than indicating proper package orientation must not be displayed on a package containing liquid dangerous goods.

#### 2.4 MARKING SPECIFICATIONS AND REQUIREMENTS

≠

##### 2.4.1 Marking with proper shipping name and UN number

2.4.1.1 Unless otherwise provided in these Instructions, the proper shipping name of the dangerous goods (supplemented with the technical name(s) if appropriate, see Part 3, Chapter 1) and, when assigned, the corresponding UN number preceded by the letters "UN" must be displayed on each package. In the case of unpackaged articles, the marking must be displayed on the article, on its cradle or on its handling, storage or launching device. A typical package marking would be:

"Corrosive liquid, acidic, organic, n.o.s. (caprylyl chloride) UN 3265".

For packages containing limited quantities of dangerous goods, the UN number (preceded by the letters "UN") may be placed within a diamond. If the diamond marking is applied, the following requirements must be met. The width of the line forming the diamond must be at least 2 mm; the number must be at least 6 mm high. When more than one substance is included in the package and the substances are assigned to different UN numbers, then the diamond must be large enough to include each relevant UN number.

≠

Note.— It is anticipated that displaying the UN number within a diamond for packages containing limited quantities of dangerous goods will become mandatory as of 1 January 2011.

2.4.1.2 For solid substances, unless the word "molten" is already included in the proper shipping name, it must be added to the proper shipping name on the package when a substance is offered for air transport in the molten state (see Part 3, Chapter 1).

*Note.— Additional descriptive text in the entries in column 1 of the Dangerous Goods List (Table 3-1) are not part of the proper shipping name but may be used in addition to the proper shipping name.*

#### **2.4.2 Shipper and consignee identification**

The name and address of the person who offers the dangerous goods for transport by air and of the consignee must be provided on each package.

#### **2.4.3 Special marking requirements for explosives**

Each package must be marked with the net quantity of explosive and the gross mass of the package. The proper shipping name required by 2.4.1 may be supplemented by additional descriptive text to indicate commercial or military names.

#### **2.4.4 Packaging specification markings**

2.4.4.1 Each outer or single packaging used for dangerous goods, for which specification packaging is required in Part 4, must bear the markings appropriate to the contents as specified in Part 6, Chapter 2.

2.4.4.2 Markings must be stamped, printed or otherwise marked on the package to provide adequate permanency.

#### **2.4.5 Special marking requirements for radioactive material**

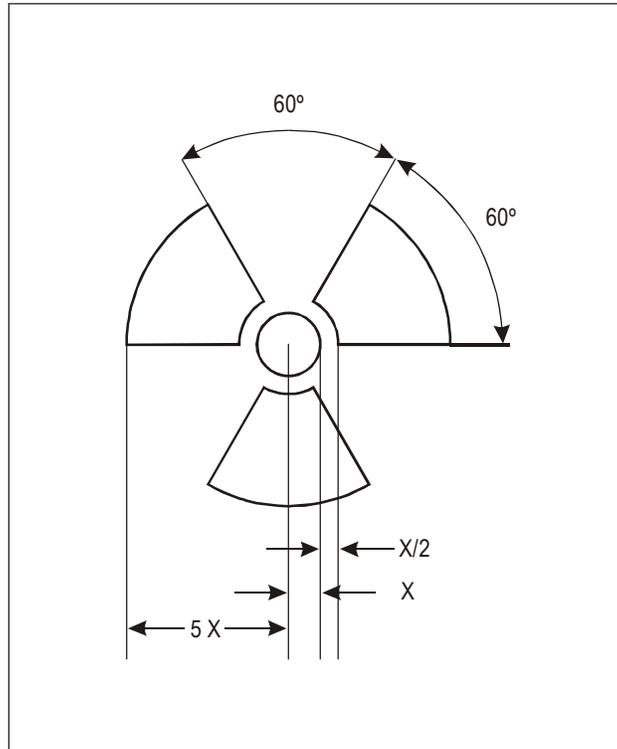

##### 2.4.5.1

- a) each package of gross mass exceeding 50 kg must have its permissible gross mass legibly and durably marked on the outside of the packaging;
- b) each package which conforms to:
  - i) a Type IP-1 package, a Type IP-2 package or a Type IP-3 package design must be legibly and durably marked on the outside of the packaging with "TYPE IP-1", "TYPE IP-2" or "TYPE IP-3" as appropriate;
  - ii) a Type A package design must be legibly and durably marked on the outside of the packaging with "TYPE A";
  - iii) a Type IP-2 package, a Type IP-3 package or a Type A package design must be legibly and durably marked on the outside of the packaging with the international vehicle registration code (VRI Code) of the country of origin of design and either the name of the manufacturer, or other identification of the packaging specified by the competent authority of the country of origin of design.
- c) each package which conforms to a design approved by the competent authority must be legibly and durably marked on the outside of the packaging with:
  - i) the identification mark allocated to that design by the competent authority;
  - ii) a serial number to uniquely identify each packaging which conforms to that design;
  - iii) in the case of a Type B(U) or Type B(M) package design, with "TYPE B(U)" or "TYPE B(M)"; and
  - iv) in the case of a Type C package design, with "TYPE C".
- d) each package which conforms to a Type B(U), Type B(M) or Type C package design must have the outside of the outermost receptacle which is resistant to the effects of fire and water plainly marked by embossing, stamping or other means resistant to the effects of fire and water with the trefoil symbol, as shown in Figure 5-1 below:
- e) each excepted package must be marked with the UN number, preceded by the letters "UN".

2.4.5.2 In case of international transport of packages requiring competent authority design or shipment approval, for which different approval types apply in the different countries concerned, marking must be in accordance with the certificate of the country of origin of the design.

#### **2.4.6 Special marking requirements for refrigerated liquefied gas**

The upright position of each package must be indicated prominently by arrows or by using the "Package orientation" label (Figure 5-26). The wording "KEEP UPRIGHT" must be placed at 120° intervals around the package or on each side. Packages must also be clearly marked "DO NOT DROP — HANDLE WITH CARE".

**Figure 5-1. Basic trefoil symbol with proportions based on a central circle of radius X. The minimum allowable size of X must be 4 mm.**

#### 2.4.7 Special marking requirement for dry ice

The net mass of solid carbon dioxide (dry ice) must be marked on any package containing such substance.

#### 2.4.8 Special marking requirement for biological substances, Category B

Packages containing biological substances, Category B packed in accordance with Packing Instruction 650 must be marked "Biological substance, Category B".

#### + 2.4.9 Special marking provisions for environmentally hazardous substances

2.4.9.1 Packages containing environmentally hazardous substances meeting the criteria of 2.9.3 of the UN Recommendations (UN Nos. 3077 and 3082) must be durably marked with the environmentally hazardous substance mark with the exception of single packagings and combination packagings containing inner packagings with:

- contents of 5 L or less for liquids; or
- contents of 5 kg or less for solids.

2.4.9.2 The environmentally hazardous substance mark must be located adjacent to the markings required by 2.4.1.1. The requirements of 2.2.2 must be met.

2.4.9.3 The environmentally hazardous substance mark must be as shown in Figure 5-2. For packagings, the dimensions must be 100 mm × 100 mm, except in the case of packages of such dimensions that they can only bear smaller marks.

#### 2.4.10 Marking of overpacks

≠ An overpack must be marked with the word "Overpack", with the proper shipping name, UN number, and special handling instructions appearing on interior packages for each item of dangerous goods contained in the overpack unless markings and labels representative of all dangerous goods in the overpack are visible, except as required in 3.2.6 and 3.5.1.1 h) to i) . Packaging specification markings must not be reproduced on the overpack.

+ **Figure 5-2. Symbol (fish and tree): black on white or suitable contrasting background**

≠ **2.4.11 Additional markings of packages containing dangerous goods in limited quantities**

Packages containing limited quantities of dangerous goods and prepared in accordance with 3;4 must be marked "limited quantity(ies)" or "LTD QTY".

**2.4.12 Markings required by other modes of transport**

Markings required by other international or national transport regulations are permitted in addition to markings required by these Instructions, provided that they cannot be confused with or conflict with any markings prescribed by these Instructions, because of their colour, design or shape.

**2.4.13 Special marking requirement for chemical oxygen generators**

When chemical oxygen generators contained in protective breathing equipment (PBE) are being transported under Special Provision A144, the statement "Aircrew protective breathing equipment (smoke hood) in accordance with Special Provision A144" shall be marked adjacent to the proper shipping name on the package.

**2.5 LANGUAGES TO BE USED**

In addition to the languages which may be required by the State of Origin, English should be used.

## Chapter 3

### LABELLING

*Parts of this Chapter are affected by State Variations CA 1, CA 4, IT 7, JP 9, JP 21, PK 2, VC 6, VU 5; see Table A-1*

*Note 1.— These provisions relate essentially to danger labels. However, additional marking or symbols indicating precautions to be taken in handling or storing a package (e.g. a symbol representing an umbrella indicating that a package should be kept dry) may be displayed on a package as appropriate. For such purposes, it is preferable to use the symbols recommended by the International Organization for Standardization (ISO).*

*Note 2.— In 3.6 of this Chapter there are provisions concerning the placarding of large freight containers for radioactive material.*

*Note 3.— The provisions concerning the placarding of portable tanks are shown in the Supplement, Part S-4;12.4.*

#### 3.1 THE REQUIREMENT TO LABEL

3.1.1 Where articles or substances are specifically listed in the Dangerous Goods List (Table 3-1), a danger class label must be affixed for the hazard shown in column 3 of Table 3-1. A subsidiary risk label must also be affixed for any risk indicated by a class or division number in column 4 of Table 3-1. However, special provisions indicated in column 7 may also require a subsidiary risk label where no subsidiary risk is indicated in column 4 or may exempt from the requirement for a subsidiary risk label where such a risk is indicated in the Dangerous Goods List.

3.1.2 Labels identifying the primary and subsidiary risks of the dangerous goods must bear the class or division number as required in 3.5.1.

3.1.3 All labels must be able to withstand open weather exposure without a substantial reduction in effectiveness.

#### 3.2 APPLICATION OF LABELS

3.2.1 The labels required to be displayed on packages of dangerous goods are identified in the Dangerous Goods List for articles and substances specifically listed by name and for articles and substances not specifically listed by name which are covered by generic or n.o.s. entries.

3.2.2 Packages containing substances of Class 8 need not show a subsidiary risk label for Division 6.1 if the toxicity arises solely from the destructive effect on tissue. Substances of Division 4.2 need not show a subsidiary risk label for Division 4.1 if the substance is also a flammable solid.

3.2.3 Packages containing organic peroxides which meet the criteria for Class 8, Packing Group I or II must be labelled with a corrosive subsidiary risk label.

*Note.— Many liquid organic peroxide formulations are flammable; however, no subsidiary risk flammable label is required because the organic peroxide label itself is considered to imply that the product may be flammable.*

3.2.4 In addition to the primary hazard label (Figure 5-17), infectious substances packages must bear any other label required by the nature of the contents. This is not required if a quantity of 30 ml or less of dangerous goods included in classes 3, 8 or 9 is packed in each primary receptacle containing infectious substances provided these substances meet the requirements of 3;5.1.2.

3.2.5 Packages containing radioactive material having additional hazardous characteristics must also be labelled to indicate those characteristics.

≠ 3.2.6 Except when enlarged labels are used in accordance with 3.6, each package, overpack and freight container containing radioactive material must bear at least two labels which conform to Figures 5-18, 5-19 and 5-20 as appropriate according to the category (see 5;1.2.3.1.4) of that package, overpack or freight container. Labels must be affixed to two opposite sides on the outside of the package or on the outside of all four sides of the freight container. Each overpack

containing radioactive material must bear at least two labels on opposite sides of the outside of the overpack. In addition, each package, overpack and freight container containing fissile material, other than fissile material excepted under the provisions of 6;7.10.2 must bear labels which conform to the model shown in Figure 5-21; such labels, where applicable, must be affixed adjacent to the labels for radioactive material. Labels must not cover the markings specified in Chapter 2. Any labels which do not relate to the contents must be removed or covered.

3.2.7 Except as provided in 3.5.1.1 d), each label must:

- a) be affixed to a background of contrasting colour or must have a dotted or solid line outer boundary;
- b) be located on the same surface of the package near the proper shipping name marking, if the package dimensions are adequate;
- c) be so placed on the packaging that they are not covered or obscured by any part of or attachment to the packaging or any other label or marking;
- d) when primary and subsidiary risk labels are required, be displayed next to each other; and
- e) in case of hazard warning labels, be affixed at an angle of 45° (diamond shaped), unless the package dimensions are inadequate.

3.2.8 Labels must not be folded. Cylindrical packages must be of such dimensions that a label will not overlap itself. In the case of cylindrical packages containing radioactive materials, which require two identical labels, these labels must be centred on opposite points of the circumference and must not overlap each other. If the dimensions of the package are such that two identical labels cannot be affixed without overlapping each other, one label is acceptable provided it does not overlap itself.

3.2.9 Labels must be firmly affixed to or printed on the package of dangerous goods. Where a package is of such an irregular shape that a label cannot be affixed to or printed on a surface, it is acceptable to attach the label to the package by an adequately strong tag.

3.2.10 Since packages or consignments of magnetized material (Class 9) must bear the "Magnetized material" label (Figure 5-24) as required by column 5 of Table 3-1, such packages or consignments do not need to bear the "Miscellaneous dangerous goods" label (Figure 5-23).

3.2.11 In addition to the class hazard labels specified in 3.1, handling labels must also be affixed to packages of dangerous goods as follows:

- a) the "Cargo aircraft only" label (Figure 5-25) must be affixed:
  - 1) when the package containing the dangerous goods may only be transported on a cargo aircraft. However, where the packing instruction number and the permitted quantity per package are identical for passenger and cargo aircraft, the "Cargo aircraft only" label should not be used;
  - 2) to each Type B(M) package of radioactive material and any freight container containing such a Type B(M) package;
  - 3) on the same surface of the package near the hazard labels;
- b) when required by the provisions of 4;1.1.13, either the "Package orientation" label (Figure 5-26), or pre-printed package orientation labels meeting the same specification as either Figure 5-26 or ISO Standard 780-1997, must be affixed to or printed on at least two opposite vertical sides of the package with the arrows pointing in the correct direction. The words "Dangerous goods" may be inserted on the label below the line;
- c) for packages containing refrigerated liquefied gases, the "Cryogenic liquid" label (Figure 5-28) must be affixed on all packages;
- d) for packages containing self-reactive substances of Division 4.1 or Division 5.2 organic peroxides, the "Keep away from heat" label (Figure 5-29) must be affixed on all packages. This label should be affixed on the same surface of the package near the hazard label(s);
- e) for excepted packages of radioactive material the "Radioactive material, excepted package" handling label (Figure 5-30) must be affixed.

3.2.12 Where a text is indicated in Figures 5-1 to 5-31, an equivalent text in another language may be used.

3.2.13 Labels required by other international or national transport regulations are permitted in addition to labels required by these Instructions, provided that they cannot be confused with or conflict with any label prescribed by these Instructions, because of their colour, design or shape.

### 3.3 LABELLING OF OVERPACKS

3.3.1 An overpack must be labelled as required for packages by Chapter 3, for each item of dangerous goods contained in the overpack unless labels representative of all dangerous goods in the overpack are visible.

3.3.2 An overpack containing single packages with end closures containing liquid dangerous goods must be labelled with either the "Package Orientation" label (Figure 5-26), or pre-printed package orientation labels meeting the same specification as either Figure 5-26 or ISO Standard 780-1997, unless such labels are affixed to the package and are visible from the outside of the overpack. Such labels must be affixed to or printed on at least two opposite vertical sides of the overpack with the arrows pointing in the direction required to indicate the orientation of the overpack required to ensure that end closures are upward, notwithstanding that such single packages may also have side closures.

### 3.4 PROHIBITED LABELLING

Arrows for purposes other than indicating proper package orientation must not be displayed on a package containing liquid dangerous goods.

### 3.5 LABEL SPECIFICATIONS

#### 3.5.1 Class hazard label specifications

3.5.1.1 Class hazard labels must conform to the following specifications:

- ≠ a) They must be in the form of a square with minimum dimensions of 100 mm × 100 mm, set at an angle of 45° (diamond shaped) except that labels of 50 mm × 50 mm may be used on packages containing infectious substances where the packages are of dimensions such that they can only bear smaller labels. They must have a line 5 mm inside the edge and running parallel with it. In the upper half of a label the line must have the same colour as the symbol and in the lower half it must have the same colour as the figure in the bottom corner. Labels are divided into halves. With the exception of Divisions 1.4, 1.5 and 1.6, the upper half of the label must contain the pictorial symbol and the lower half must contain the class or division number (and for goods of Class 1, the compatibility group letter) as appropriate. The label may include text such as the UN number or words describing the hazard class or division (e.g. "flammable") in accordance with f) provided the text does not obscure or detract from the other required label elements.
- b) The symbols, texts and numbers must be shown in black on all labels except:
  - 1) the Class 8 label, where the text (if any) and class number must appear in white;
  - 2) labels with entirely green, red or blue backgrounds, where they may be shown in white; and
- + 3) the Division 5.2 label, where the symbol may be shown in white.
- c) Except for Divisions 1.4, 1.5 and 1.6, labels for Class 1 show in the lower half the division number and compatibility group letter for the substance or article. Labels for Divisions 1.4, 1.5 and 1.6 must show in the upper half the division number and in the lower half the compatibility group letter.
- ≠ d) Cylinders for Class 2 may, on account of their shape, orientation and securing mechanisms for transport, bear labels representative of those specified in this chapter, which have been reduced in size, according to ISO 7225:2005, for display on the non-cylindrical part (shoulder) of such cylinders. Labels may overlap to the extent provided for by ISO 7225:2005 "Gas cylinders — Precautionary labels"; however, in all cases the labels representing the primary hazard and the numbers appearing on any label must remain fully visible and the symbols recognizable.
- e) In the case of labels for Class 5, the division number of the substance must be shown in the bottom corner of the label. For all other labels, the class number must be shown in the bottom corner of the label.
- f) Unless otherwise provided for in these Instructions, only text indicating the nature of the risk may be inserted in the lower half of the label (in addition to the class or division number of compatibility group).
- g) A label may contain form identification information, including the name of its maker, provided that information is printed outside of the solid line border in no larger than 10-point type.

#### *Labelling of radioactive material*

- h) Each label conforming to Figures 5-18, 5-19 and 5-20 must be completed with the following information:

## 1) Contents:

A) except for LSA-I material, the name(s) of the radionuclide(s) as taken from Table 2-12, using the symbols prescribed therein. For mixtures of radionuclides, the most restrictive nuclides must be listed to the extent the space on the line permits. The group of LSA or SCO must be shown following the name(s) of the radionuclide(s). The terms "LSA-II", "LSA-III", "SCO-I" and "SCO-II" must be used for this purpose;

B) for LSA-I material, the term "LSA-I" is all that is necessary; the name of the radionuclide is not necessary;

2) Activity: The maximum activity of the radioactive contents during transport expressed in units of becquerels (Bq) with the appropriate SI prefix symbol. For fissile material, the mass of fissile material in units of grams (g), or multiples thereof, may be used in place of activity;

3) For overpacks and freight containers the "contents" and "activity" entries on the label must bear the information required in 3.5.1.1 h) 1 A) and B), respectively, totalled together for the entire contents of the overpack or freight container except that on labels for overpacks or freight containers containing mixed loads of packages containing different radionuclides, such entries may read "See Transport Documents";

≠ 4) Transport index: The number determined in accordance with 1.2.3.1.1 and 1.2.3.1.2. (No transport index entry is required for category I-WHITE.)

i) Each label conforming to the Figure 5-21 must be completed with the criticality safety index (CSI) as stated in the certificate of approval for special arrangement or the certificate of approval for the package design issued by the competent authority.

j) For overpacks and freight containers, the criticality safety index (CSI) on the label must bear the information required in h) above totalled together for the fissile contents of the overpack or freight container.

k) In case of international transport of packages requiring competent authority design or shipment approval, for which different approval types apply in the different countries concerned, labelling must be in accordance with the certificate of the country of origin of design.

3.5.1.2 Illustrations of the class hazard labels, showing the approved symbols and colours, are given in Figures 5-3 to 5-23. The label descriptions used in column 5 of Table 3-1 are indicated in parentheses.

*Note 1.— The asterisk appearing in the bottom corner of the label indicates the location of the class or division number when the label is used to show the primary risk. See Figures 5-3 to 5-6 concerning the location of information on explosives labels.*

*Note 2.— Minor variations in the design of the symbol on labels or other differences such as the width of vertical lines on labels as shown in these Instructions or in regulations of other modes, which do not affect the obvious meaning of the label, are acceptable. For example the hand shown on the Class 8 label may be shown with or without shading, the extreme right and left vertical lines on the Division 4.1 and Class 9 label may extend to the edge of the label or there may be some white space at the edge, etc.*

## ≠ 3.5.2 Handling labels

### ≠ 3.5.2.1 Handling label specifications

An illustration of each of the handling labels showing the approved design and colour is given in Figures 5-24 to 5-26 and Figures 5-28 to 5-31. The minimum label dimensions are shown in the figures, however:

a) labels having dimensions not smaller than half of those indicated may be used on packages containing infectious substances when the packages are of dimensions such that they can only bear smaller labels; and

b) orientation labels may meet the specification of either Figure 5-26 or ISO Standard 780-1997.

### + 3.5.2.2 Lithium battery handling label

Packages containing lithium batteries packed according to Packing Instructions 965 to 970 that are not subject to other additional requirements of these Instructions must bear a "Lithium battery" handling label (Figure 5-31). The label must show "Lithium metal batteries" or "Lithium ion batteries", as applicable. Where the package contains both types of batteries, the label must show "Lithium metal and lithium ion batteries".

### 3.6 PLACARDING OF LARGE FREIGHT CONTAINERS CONTAINING RADIOACTIVE MATERIAL

#### 3.6.1 Special provisions for Class 7

3.6.1.1 Large freight containers carrying packages (other than excepted packages) and tanks must bear four placards which conform with Figure 5-27. The placards must be affixed in a vertical orientation to each side wall and each end wall of the large freight container. Any placards which do not relate to the contents must be removed. Instead of using both labels and placards, it is permitted as an alternative to use enlarged labels only, as shown in Figures 5-18, 5-19 and 5-20, and where appropriate Figure 5-21, with dimensions as required for the placard in Figure 5-27.

3.6.1.2 For Class 7, the placard must have minimum overall dimensions of 250 mm by 250 mm with a black line running 5 mm inside the edge and parallel with it, and must be otherwise as shown in Figure 5-27. The number 7 must not be less than 25 mm high. The background colour of the upper half of the placard must be yellow and of the lower half white, the colour of the trefoil and the printing must be black. The use of the word "Radioactive" in the bottom half is optional to allow the use of this placard to display the appropriate United Nations number for the consignment.

## Chapter 4

### DOCUMENTATION

*Parts of this Chapter are affected by State Variations AE 1, BN 1, CA 4, CA 14, CA 15, CA 16, CA 20, ES 1, HK 2, JM 2, JM 3, MY 6, PK 3, US 1, US 7, US 12, VC 7, VU 1, ZA 3; see Table A-1*

≠ *Note.— These Instructions do not preclude the use of electronic data processing (EDP) and electronic data interchange (EDI) transmission techniques as an alternative to paper documentation, unless otherwise indicated.*

#### 4.1 DANGEROUS GOODS TRANSPORT INFORMATION

##### ≠ 4.1.1 General

4.1.1.1 The person who offers dangerous goods for transport by air must provide to the operator the information applicable to the consignment as set out in this paragraph. The information may be provided on a paper document or, where an agreement exists with the operator, by EDP or EDI techniques.

4.1.1.2 Where a paper document is used, the person who offers dangerous goods for transport by air must provide to the operator two copies of the dangerous goods transport document, completed and signed as provided for in this paragraph.

4.1.1.3 Where the dangerous goods transport information is provided by EDP or EDI techniques the data must be able to be produced as a paper document without delay, with the data in the sequence required by this chapter.

*Note.— All references to “dangerous goods transport document” in this chapter also include provision of the required information by use of EDP and EDI transmission techniques.*

##### 4.1.2 Form of the transport document

4.1.2.1 A dangerous goods transport document may be in any form, provided it contains all of the information required by these Instructions.

4.1.2.2 If both dangerous and non-dangerous goods are listed in one document, the dangerous goods must be listed first, or otherwise be emphasized.

##### 4.1.2.3 Continuation page

A dangerous goods transport document may consist of more than one page, provided pages are consecutively numbered.

4.1.2.4 The information on a dangerous goods transport document must be easy to identify, legible and durable.

##### 4.1.3 Shipper and consignee

The name and address of the shipper and the consignee of the dangerous goods must be included on the dangerous goods transport document.

##### 4.1.4 Information required on the dangerous goods transport document

###### 4.1.4.1 Dangerous goods description

The dangerous goods transport document must contain the following information for each dangerous substance, material or article offered for transport:

- a) the UN number preceded by the letters “UN”;
- b) the proper shipping name, as determined according to 3;1.2, including the technical name enclosed in parenthesis, as applicable (see 3;1.2.7);

- c) the primary hazard class or, when assigned, the division of the goods, including for Class 1 the compatibility group letter. The words "Class" or "Division" may be included preceding the primary hazard class or division numbers;
- d) subsidiary hazard class or division number(s) corresponding to the subsidiary risk label(s) required to be applied, when assigned, must be entered following the primary hazard class or division and must be enclosed in parenthesis. The words "Class" or "Division" may be included preceding the subsidiary hazard class or division numbers;
- e) where assigned, the packing group for the substance or article which may be preceded by "PG" (e.g. "PG II").

#### 4.1.4.2 Sequence of the dangerous goods description

The five elements of dangerous goods description specified in 4.1.4.1 must be shown in the order listed above (i.e. a), b), c), d), e)), with no information interspersed, except as provided in these Instructions. Examples of a dangerous goods description are:

"UN 1717 Acetyl chloride 3 (8) II" or  
 "UN 1717 Acetyl chloride, Class 3 (Class 8), PG II"

*Note 1.— In addition to the requirements of these Instructions, other elements of information may be required by the appropriate national authority or for certain modes of transport (e.g. flash point for sea transport). Unless permitted or required by these Instructions, additional information must be placed after the dangerous goods description.*

*Note 2.— Additional descriptive text in the entries in column 1 of the Dangerous Goods List (Table 3-1) are not part of the proper shipping name but may be used in addition to the proper shipping name.*

*Note 3.— For explosives of Class 1, the basic dangerous goods description may be supplemented by additional descriptive text to indicate commercial or military names.*

#### 4.1.4.3 Information which supplements the proper shipping name in the dangerous goods description

The proper shipping name in the dangerous goods description must be supplemented as follows:

- a) *Technical names for "n.o.s." and other generic descriptions:* Proper shipping names that are assigned an asterisk in column 1 of the Dangerous Goods List must be supplemented with their technical or chemical group names as described in 3;1.2.5;
- b) *Empty uncleaned packagings:* Empty means of containment which contain the residue of dangerous goods of classes other than Class 7 must be described as such by, for example, placing the words "Empty uncleaned" or "Residue last contained" before or after the proper shipping name;
- c) *Wastes:* For waste dangerous goods (other than radioactive wastes) which are being transported for disposal, or for processing for disposal, the proper shipping name must be preceded by the word "Waste", unless this is already a part of the proper shipping name;
- d) *Elevated temperature substances:* For solid substances, unless the word "Molten" is already included in the proper shipping name, it must be added to the proper shipping name on the dangerous goods transport document when a substance is offered for air transport in the molten state (see Part 3, Chapter 1).

### 4.1.5 Information required in addition to the dangerous goods description

In addition to the dangerous goods description the following information must be included after the dangerous goods description on the dangerous goods transport document.

#### 4.1.5.1 Quantity of dangerous goods, number and type of packagings

The number of packages, type of packaging (e.g. steel drum, fibreboard box, etc.) and net quantity of dangerous goods in each package (by volume or mass, as appropriate) must be indicated for each item of dangerous goods bearing a different proper shipping name, UN number or packing group. Abbreviations may be used to specify the unit of measurement for the quantity. For packages containing the same dangerous goods and quantity per package a multiple of the quantity may be used. For example:

UN 1263, Paint, 3, PG II, 5 fibreboard boxes x 5 L

Consignment comprising packages of different quantities of the same dangerous good must be clearly identified. For example:

UN 1263, Paint, 3, PG II, 5 fibreboard boxes x 5 L, 10 fibreboard boxes x 10 L

UN packaging codes may only be used to supplement the description of the kind of package (e.g. one fibreboard box (4G)). Where the letter "G" follows the quantity in column 11 or 13 of Table 3-1 the gross mass of each package must be indicated, rather than the net quantity; and:

- a) for empty uncleaned packagings as described by 4.1.4.3 b) only the number and type of packagings need be shown;
- b) for chemical kits and first aid kits, the total net mass of dangerous goods. Where the kits contain solids and/or liquids, the net mass of liquids within the kits is to be calculated on a 1 to 1 basis of their volume, i.e. 1 litre equal to 1 kilogram;
- c) for dangerous goods in machinery or apparatus, the individual total quantities of dangerous goods in solid, liquid or gaseous state, contained in the article;
- d) for dangerous goods transported in salvage packagings, an estimate of the quantity of dangerous goods must be given;
- ≠ e) for items where "No Limit" is shown in column 11 or 13 the quantity must be the net mass or volume for substances (e.g. UN 2964, UN 3291). For articles (e.g. UN 2794, UN 2800, UN 2990, UN 3166) the quantity must be the gross mass, followed by the letter G.

#### 4.1.5.2 Limited quantities

When dangerous goods are transported according to the exceptions for dangerous goods packed in limited quantities, the words "Limited quantity" or "LTD QTY" must be included.

#### 4.1.5.3 Salvage packagings

For dangerous goods transported in salvage packagings, the words "Salvage package" must be included.

#### 4.1.5.4 Chemical oxygen generators

When chemical oxygen generators contained in protective breathing equipment (PBE) are being transported under Special Provision A144, the statement "Aircrew protective breathing equipment (smoke hood) in accordance with Special Provision A144" must be included on the dangerous goods transport document.

#### 4.1.5.5 Self-reactive substances and organic peroxides

Not used.

4.1.5.5.1 When organic peroxides and self-reactive substances are transported under conditions where approval is required (for organic peroxides, see 2;5.3.2.5 for self-reactive substances, see 2;4.2.3.2.5), a statement to this effect must be included in the dangerous goods transport document. A copy of the classification approval and conditions of transport for non-listed organic peroxides and self-reactive substances must be attached to the dangerous goods transport document.

4.1.5.5.2 When a sample of an organic peroxide (see 2;5.3.2.6) or a self-reactive substance (see 2;4.2.3.2.6) is transported, a statement to this effect must be included in the dangerous goods transport document.

#### 4.1.5.6 Infectious substances and controlled substances

The dangerous goods transport document must also include the name and telephone number of a responsible person when a national law or international convention prohibits the disclosure of the technical name following an "n.o.s.\*)" entry or for infectious substances, UN 2814 and 2900.

#### 4.1.5.7 Radioactive material

4.1.5.7.1 The following information must be included for each consignment of Class 7 material, as applicable, in the order given:

- a) The name or symbol of each radionuclide or, for mixtures of radionuclides, an appropriate general description or a list of the most restrictive nuclides;
- b) A description of the physical and chemical form of the material, or a notation that the material is special form radioactive material or low dispersible radioactive material. A generic chemical description is acceptable for chemical form;
- c) The maximum activity of the radioactive contents during transport expressed in units of becquerels (Bq) with an appropriate SI prefix symbol (see 1;3.2). For fissile material, the mass of fissile material in units of grams (g), or appropriate multiples thereof, may be used in place of activity;
- d) The category of the package, i.e. I-WHITE, II-YELLOW, III-YELLOW;
- e) The transport index (categories II-YELLOW and III-YELLOW only);

- f) For consignments including fissile material other than consignments excepted under 6;7.10.2, the criticality safety index;
- g) The identification mark for each competent authority approval certificate (special form radioactive material, low dispersible radioactive material, special arrangement, package design, or shipment) applicable to the consignment;
- h) For consignments of more than one package, the information contained in 4.1.4.1 a) to c) and 4.1.5.7.1 a) to g) must be given for each package. For packages in an overpack or freight container, a detailed statement of the contents of each package within the overpack or freight container and, where appropriate, of each overpack or freight container must be included. If packages are to be removed from the overpack or freight container at a point of intermediate unloading, appropriate transport documents must be made available;
- i) Where a consignment is required to be shipped under exclusive use, the statement "EXCLUSIVE USE SHIPMENT"; and
- j) For LSA-II, LSA-III, SCO-I and SCO-II, the total activity of the consignment as a multiple of  $A_2$ .

4.1.5.7.2 The shipper must provide a statement regarding actions, if any, that are required to be taken by the carrier. The statement must be in the languages deemed necessary by the carrier or the authorities concerned, and must include at least the following points:

- a) Supplementary requirements for loading, stowage, carriage, handling and unloading of the package, overpack or freight container including any special stowage provisions for the safe dissipation of heat (see 7;2.9.3.2), or a statement that no such requirements are necessary;
- b) Restrictions on the type of aircraft and any necessary routing instructions;
- c) Emergency arrangements appropriate to the consignment.

4.1.5.7.3 In case of international transport of packages requiring competent authorities design or shipment approval, for which different approval types apply in the different countries concerned, the UN number and proper shipping name required in 4.1.4.1 must be in accordance with the certificate of the country of origin of design.

≠ 4.1.5.7.4 The applicable competent authority certificates need not necessarily accompany the consignment. The shipper must make them available.

#### 4.1.5.8 Additional requirements

4.1.5.8.1 The dangerous goods transport document must also contain:

- a) the packing instruction applied and, when applicable, reference to Special Provision A1, A2 or A109, except for radioactive material;
- b) a statement indicating that the shipment is within the limitations prescribed for either passenger and cargo aircraft or cargo-only aircraft, as appropriate;

*Note.— To qualify as acceptable for transport aboard passenger aircraft, passenger aircraft packing instruction number(s) must be used, and the package must not bear the "Cargo aircraft only" label. To qualify as acceptable for transport aboard cargo-only aircraft, cargo aircraft packing instruction number(s) must be used, and the package must bear the "Cargo aircraft only" label; or passenger aircraft instruction number(s) must be shown and no "Cargo aircraft only" label applied. However, where the packing instruction number(s) and the permitted quantity per package are identical for passenger and cargo aircraft, the "Cargo aircraft only" label should not be used.*

- c) special handling information, when appropriate;
- d) an indication that an overpack has been used, when appropriate; and
- e) the "Q" value rounded up to the first decimal place, if substances are packed in accordance with 3;4.3.3 or 4;1.1.8 e).

4.1.5.8.2 For explosive substances, where Packing Instruction 101 has been adopted by an appropriate national authority, the State's distinguishing sign for motor vehicles in international traffic of the country for which the authority acts must be marked on the dangerous goods transport document as follows:

Packaging authorized by the competent authority of ...

*Note.— In this instance, the term "competent authority" is used for intermodal compatibility; it refers to the appropriate national authority.*

4.1.5.8.3 When self-reactive substances of Division 4.1, or organic peroxides of Division 5.2 or other substances having similar properties, are offered for transport, the shipper must indicate on the dangerous goods transport document that the packages containing such substances must be protected from direct sunlight and all sources of heat and be placed in

adequately-ventilated areas.

#### 4.1.6 Certification

4.1.6.1 The dangerous goods transport document must include a certification or declaration that the consignment is acceptable for transport and that the goods are properly packaged, marked and labelled, and in proper condition for transport in accordance with the applicable regulations and including additional air transport requirements of these Instructions (examples of additional air transport requirements are indicated in 5;1.1).

The text for this certification is:

"I hereby declare that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked and labelled/placarded, and are in all respects in proper condition for transport according to applicable international and national governmental regulations."

For air transport the following additional statement is required:

"I declare that all of the applicable air transport requirements have been met."

The certification must be signed and dated by the shipper. Facsimile signatures are acceptable where applicable laws and regulations recognize the legal validity of facsimile signatures.

*Note.— The word "placarded" is not essential for shipments by air.*

≠ 4.1.6.2 If the dangerous goods documentation is presented to the operator by means of electronic data processing (EDP) or electronic data interchange (EDI) transmission techniques, the signature(s) may be replaced by the name(s) (in capitals) of the person authorized to sign. Where the original consignment details are provided to an operator, by EDP or EDI techniques, and subsequently the consignment is transhipped to an operator that requires a paper dangerous goods transport document, the paper document must indicate "Original Received Electronically" and the name of the signatory must be shown in capital letters.

4.1.6.3 In addition to the languages which may be required by the State of Origin, English should be used for the dangerous goods transport document.

## 4.2 AIR WAYBILL

When an air waybill is issued for a consignment for which a dangerous goods transport document is required, the air waybill must contain a statement to indicate that the dangerous goods are described on an accompanying dangerous goods transport document. An air waybill issued for a consignment must, when applicable, indicate that the consignment must be loaded on cargo aircraft only.

## 4.3 ADDITIONAL DOCUMENTATION FOR OTHER THAN RADIOACTIVE MATERIAL

4.3.1 When dangerous goods are shipped as authorized by Special Provision A1, A2 or A109, they must be accompanied by a copy of the document(s) of approval, showing the quantity limitations, the packing requirements and, in the case of A2, the labelling requirements.

4.3.2 When dangerous goods are shipped in portable tanks as authorized by Part S-4, Chapter 12 of the Supplement, they must be accompanied by a copy of the document(s) of approval.

4.3.3 When dangerous goods are shipped in packagings as authorized by 4;2.8, they must be accompanied by a copy of the document(s) of approval.

4.3.4 When organic peroxides and self-reactive substances require an approval prior to transport under the provisions of 2;5.3.2.5 or 2;4.2.3.2.5, a copy of the approval must be attached to the dangerous goods transport document.

4.3.5 When dangerous goods are shipped under exemption (see 1;1.1.2), a copy of the exemption must accompany the consignment. Where more than one State has granted an exemption for a particular consignment, the documents that need to accompany it are the exemptions granted by the States of Origin, transit (if relevant) and destination.

## 4.4 DOCUMENTATION FOR RADIOACTIVE MATERIAL, EXCEPTED PACKAGE

Excepted packages of radioactive material must be shown on the air waybill or other similar document (such as a consignment note) by the appropriate proper shipping name and UN number as shown in the list below. This information must be included with the description of the goods:

- a) "Radioactive material, excepted package — empty packaging" (UN 2908);
- b) "Radioactive material, excepted package — articles manufactured from natural uranium" (UN 2909); or "Radioactive material, excepted package — articles manufactured from depleted uranium" (UN 2909); or "Radioactive material, excepted package — articles manufactured from natural thorium" (UN 2909);
- c) "Radioactive material, excepted package — limited quantity of material" (UN 2910);
- d) "Radioactive material, excepted package — instruments" (UN 2911); or "Radioactive material, excepted package — articles" (UN 2911).

(See 1;6.1.5.1.)

---

**Part 6**

**PACKAGING NOMENCLATURE, MARKING,  
REQUIREMENTS AND TESTS**

## Chapter 1

### APPLICABILITY, NOMENCLATURE AND CODES

#### 1.1 APPLICABILITY

1.1.1 The applicability of each Chapter of this Part to the packagings for the various Classes and Divisions of dangerous goods is as set out in Table 6-1.

**Table 6-1. Applicability of Chapters**

<i>Class or Division</i>	<i>Chapter</i>
Classes 1, 2, 3, 4, 5, 8 and 9 and Division 6.1, where the packing instructions for these Classes and Divisions require the use of a packaging marked in accordance with Chapter 2 of this Part	1 to 5
Division 6.2, infectious substances	2, 6
Class 7, radioactive material	7

1.1.2 The requirements for packagings in Chapter 3 are based on packagings currently used. In order to take into account progress in science and technology, there is no objection to the use of packagings having specifications different from those in Chapter 3, provided they are equally effective, acceptable to the appropriate authority and able successfully to withstand the tests described in 4;1.1.18 and Chapter 4. Methods of testing other than those described in these Instructions are acceptable, provided they are equivalent.

1.1.3 Manufacturers and subsequent distributors of packagings must provide information regarding procedures to be followed (including closure instructions for inner packagings and receptacles), a description of the types and dimensions of the closures (including required gaskets) and any other components needed to ensure that packages, as presented for transport, are capable of passing the applicable performance tests of Chapters 4 to 7 and the pressure differential requirements of 4;1.1.6 as applicable.

#### 1.2 CODES FOR DESIGNATING TYPES OF PACKAGINGS

1.2.1 Two systems of codes are used in these Instructions for designating types of packagings. The first is based on the UN Recommendations, Chapter 6, and is applicable to packagings other than inner packagings. The second is applicable to inner packagings.

1.2.2 The code consists of:

- an Arabic numeral indicating the kind of packaging, e.g. drum, jerrican, etc., followed by
- a capital letter(s) in Latin characters indicating the nature of the material, e.g. steel, wood, etc., followed where necessary by
- an Arabic numeral indicating the category of packaging within the kind to which the packaging belongs.

1.2.3 In the case of composite packagings, two capital letters in Latin characters are used in sequence in the second position of the code. The first indicates the material of the inner receptacle and the second that of the outer packaging.

1.2.4 For combination packagings, only the code number for the outer packaging is used.

1.2.5 The following numerals must be used for the kinds of packaging:

1. Drum
2. Reserved
3. Jerrican
4. Box
5. Bag
6. Composite packaging.

1.2.6 The following capital letters must be used for the types of material:

- A. Steel (all types and surface treatments)
- B. Aluminium
- C. Natural wood
- D. Plywood
- F. Reconstituted wood
- G. Fibreboard
- H. Plastic material
- L. Textile
- M. Paper, multiwall
- N. Metal (other than steel or aluminium)
- P. Glass, porcelain or stoneware (not used in these Instructions).

+ Note.— Plastics materials are taken to include other polymeric materials such as rubber.

1.2.7 The letters “T” or “U” or “V” or “W” may follow the packaging code. The letter “T” signifies a salvage packaging conforming to the requirements of 4.8. The letter “U” signifies a special packaging conforming to the requirements of 6.4. The letter “V” signifies a special packaging conforming to the requirements of 4.1.7. The letter “W” signifies that the packaging, although of the same type indicated by the code, is manufactured to a specification different to that in 3.1 and is considered equivalent under the requirements of 1.1.2.

1.2.8 The following code is used in these Instructions for designating inner packagings:

- the capital letters “IP” in Latin characters indicating “Inner Packaging”;
- an Arabic numeral indicating the kind of inner packaging;
- where appropriate, a capital letter in Latin characters indicating the category within the kind.

### 1.3 INDEX OF PACKAGINGS

Table 6-2 contains an index of packagings, other than inner packagings, referred to in Chapters 1 to 4. It lists all the packagings, except inner packagings, specified in the United Nations *Recommendations for the Transport of Dangerous Goods*, and notes those not used in these Instructions for air transport. The index lists the number of the paragraph containing the requirements of those packagings used in these Instructions. The performance tests are specified in Chapter 4. Table 6-3 contains an index of inner packagings and lists the paragraph number containing the requirements together with, where applicable, individual performance tests (e.g. for aerosols).

**Table 6-2. Index of packagings other than inner packagings**

<i>Kind</i>	<i>Code and, where applicable, category</i>	<i>Paragraph</i>	<i>Maximum capacity (L)</i>	<i>Maximum net mass (kg)</i>
Steel drums	1A1 non-removable head	3.1.1	450	400
	1A2 removable head	3.1.1	450	400
Aluminium drums	1B1 non-removable head	3.1.2	450	400
	1B2 removable head	3.1.2	450	400
Metal (other than steel or aluminium) drums	1N1 non-removable head	3.1.3	450	400
	1N2 removable head	3.1.3	450	400
Steel jerricans	3A1 non-removable head	3.1.4	60	120
	3A2 removable head	3.1.4	60	120
Aluminium jerricans	3B1 non-removable head	3.1.4	60	120
	3B2 removable head	3.1.4	60	120
Plywood drums	1D	3.1.5	250	400
Reserved				
Fibre drums	1G	3.1.6	450	400
Plastic drums and jerricans	1H1 drums, non-removable head	3.1.7	450	400

<i>Kind</i>	<i>Code and, where applicable, category</i>		<i>Paragraph</i>	<i>Maximum capacity (L)</i>	<i>Maximum net mass (kg)</i>
	1H2	drums, removable head	3.1.7	450	400
	3H1	jerricans, non-removable head	3.1.7	60	120
	3H2	jerricans, removable head	3.1.7	60	120
Boxes of natural wood	4C1	ordinary	3.1.8		400
	4C2	with siftproof walls	3.1.8		400
Plywood boxes	4D		3.1.9		400
Reconstituted wood boxes	4F		3.1.10		400
Fibreboard boxes	4G		3.1.11		400
Plastic boxes	4H1	expanded plastic boxes	3.1.12		60
	4H2	solid plastic boxes	3.1.12		400
Steel or aluminium boxes	4A	steel	3.1.13		400
	4B	aluminium	3.1.13		400
Textile bags	5L1	without inner liner or coating	Not used in these Instructions		
	5L2	siftproof	3.1.14		50
	5L3	water-resistant	3.1.14		50
Woven plastic bags	5H1	without inner liner or coating	Specialized use only		
	5H2	siftproof	3.1.15		50
	5H3	water-resistant	3.1.15		50
Plastic film bags	5H4		3.1.16		50
Paper bags	5M1	multiwall	3.1.17		
	5M2	multiwall, water-resistant	3.1.17		50
Composite packaging (plastic material)	6HA1	plastic receptacle with outer steel drum	3.1.18	250	400
	6HA2	plastic receptacle with outer steel crate*/or box	3.1.18	60	75
	6HB1	plastic receptacle with outer aluminium drum	3.1.18	250	400
	6HB2	plastic receptacle with outer aluminium crate*/or box	3.1.18	60	75
	6HC	plastic receptacle with outer wooden box	3.1.18	60	75
	6HD1	plastic receptacle with outer plywood drum	3.1.18	250	400
	6HD2	plastic receptacle with outer plywood box	3.1.18	60	75
	6HG1	plastic receptacle with outer fibre drum	3.1.18	250	400
	6HG2	plastic receptacle with outer fibreboard box	3.1.18	60	75
	6HH1	plastic receptacle with outer plastic drum	3.1.18	250	400
	6HH2	plastic receptacle with outer solid plastic box	3.1.18	60	75
Composite packagings (glass, porcelain or stoneware)	6PA1	receptacle with outer steel drum			
	6PA2	receptacle with outer steel crate*/or box			
	6PB1	receptacle with outer aluminium drum			
	6PB2	receptacle with outer aluminium crate*/or box			
	6PC	receptacle with outer wooden box			
	6PD1	receptacle with outer plywood drum	Not used in these Instructions		
	6PD2	receptacle with outer wickerwork hamper			
	6PG1	receptacle with outer fibre drum			
	6PG2	receptacle with outer fibreboard box			
	6PH1	receptacle with outer expanded plastic packaging			
	6PH2	receptacle with outer solid plastic packaging			

\* Crates are outer packagings with incomplete surfaces. For air transport, crates may not be used as outer packagings of composite packagings.

**Table 6-3. Index of inner packagings**

<i>Code</i>	<i>Kind</i>	<i>Paragraph</i>
IP.1	Earthenware, glass or wax	3.2.1
IP.2	Plastic	3.2.2
IP.3	Metal cans, tins or tubes (other than aluminium)	3.2.3.1
IP.3A	Metal cans, tins or tubes (aluminium)	3.2.3.2
IP.4	Multiwall paper bags	3.2.4
IP.5	Plastic bags	3.2.5
IP.6	Fibre cans or boxes	3.2.6
IP.7	Metal receptacles (aerosols), non-refillable	3.2.7.1
IP.7A	Metal receptacles (aerosols), non-refillable	3.2.7.1
IP.7B	Metal receptacles (aerosols), non-refillable	3.2.7.2
IP.7C	Plastic receptacle (aerosols), non-refillable	3.2.8
IP.8	Glass ampoules (glass tubes)	3.2.9
IP.9	Metal or plastic flexible tubes	3.2.10
IP.10	Bags, paper with plastic/aluminium	3.2.11

## Chapter 2

# MARKING OF PACKAGINGS OTHER THAN INNER PACKAGINGS

### Introductory Notes

*Note 1.— The marking indicates that the packaging which bears it corresponds to a successfully tested design type and that it complies with the provisions of Chapters 3 and 4 which are related to the manufacture, but not to the use, of the packaging. In itself, therefore, the mark does not necessarily confirm that the packaging may be used for any particular substance.*

*Note 2.— The marking is intended to be of assistance to packaging manufacturers, reconditioners, packaging users, operators and appropriate authorities. In relation to the use of a new packaging, the original marking is a means for its manufacturer(s) to identify the type and to indicate those performance test regulations that have been met.*

*Note 3.— The marking does not always provide full details of the test levels, etc., and these may need to be taken further into account, e.g. by reference to a test certificate, test reports or register of successfully tested packagings. For example, a packaging having an X or Y marking may be used for substances to which a packing group having a lesser degree of danger has been assigned with the relevant maximum permissible value of the relative density, determined by taking into account the factor 1.5 or 2.25 indicated in the test requirements for packagings in Chapter 4 as appropriate, i.e. a Packing Group I packaging tested for products with a relative density of 1.2 could be used as a Packing Group II packaging for products with a relative density of 1.8 or a Packing Group III packaging for products with a relative density of 2.7, provided of course that all the performance criteria can still be met with the higher relative density.*

### 2.1 MARKING REQUIREMENTS FOR PACKAGINGS OTHER THAN INNER PACKAGINGS

2.1.1 Each packaging intended for use according to these Instructions must bear markings which are durable, legible and placed in a location and of such a size relative to the packaging as to be readily visible. For packages with a gross mass of more than 30 kg the markings, or a duplicate thereof, must appear on the top or on a side of the packaging. Letters, numerals and symbols must be at least 12 mm high, except for packagings of 30 L or 30 kg capacity or less, when they must be at least 6 mm in height and for packagings of 5 L or 5 kg or less when they must be of an appropriate size. The markings must show:

- a) the United Nations packaging symbol 

≠ This symbol must not be used for any purpose other than certifying that a packaging complies with the relevant requirements in Chapters 1 to 6. For embossed metal packagings the capital letters "UN" may be applied as the symbol;

- b) the code designating the type of packaging according to 1.2;

- c) a code in two parts:

- 1) a letter designating the packing group(s) for which the design type has been successfully tested:

X for Packing Groups I, II and III

Y for Packing Groups II and III

Z for Packing Group III only;

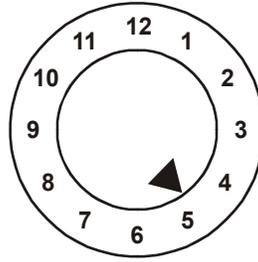

- 2) A) for single packagings intended to contain liquids: the relative density, rounded off to the first decimal, for which the design type has been tested; this may be omitted when the relative density does not exceed 1.2;

B) for packagings intended to contain solids or inner packagings: the maximum gross mass, in kilograms, at which the design type has been tested;

- d) 1) for single packagings intended to contain liquids: the hydraulic test pressure which the packaging was shown to withstand, in kPa rounded down to the nearest 10 kPa;

- 2) for packagings intended to contain solids or inner packagings: the letter "S";

- e) the last two digits of the year during which the packaging was manufactured. Packagings of types 1H1, 1H2, 3H1 and 3H2 must also be appropriately marked with the month of manufacture; this may be marked on the packaging in a different place from the remainder of the marking. An appropriate method is:

- f) the State authorizing the allocation of the mark, indicated by the distinguishing sign for motor vehicles in international traffic;
- g) the name of the manufacturer or other identification of the packaging specified by the appropriate national authority.

2.1.2 In addition to the durable markings prescribed in 2.1.1, every new metal drum of a capacity greater than 100 L must bear the marks described in 2.1.1. a) to e) on the bottom, with an indication of the nominal thickness of at least the metal used in the body (in mm, to 0.1 mm), in a permanent form (e.g. embossed). When the nominal thickness of either head of a metal drum is thinner than that of the body, the nominal thicknesses of the top head, body and bottom head must be marked on the bottom in a permanent form (e.g. embossed), for example "1.0-1.2-1.0" or "0.9-1.0-1.0". Nominal thicknesses of metal must be determined according to the appropriate ISO Standard, for example ISO 3574:1999 for steel. The marks indicated in 2.1.1 f) and g) must not be applied in a permanent form (e.g. embossed) except as provided for in 2.1.5.

2.1.3 Every packaging liable to undergo a reconditioning process other than those referred to in 2.1.2 must bear the marks indicated in 2.1.1 a) to e) in a permanent form. Marks are permanent if they are able to withstand the reconditioning process (e.g. embossed). For packagings other than metal drums of a capacity greater than 100 L, these permanent marks may replace the corresponding durable markings prescribed in 2.1.1.

2.1.4 For re-manufactured metal drums, if there is no change to the packaging type and no replacement or removal of integral structural components, the required markings need not be permanent (e.g. embossed). Every other re-manufactured metal drum must bear the markings indicated in 2.1.1 a) to e) in a permanent form (e.g. embossed) on the top head or side.

2.1.5 Metal drums made from materials (e.g. stainless steel) designed to be reused repeatedly may bear the markings indicated in 2.1.1 f) and g) in a permanent form (e.g. embossed).

2.1.6 Packagings manufactured with recycled plastic material as defined in 1;3 must be marked "REC". This mark must be placed near the marking prescribed in 2.1.1.

2.1.7 Marking must be applied in the sequence of the sub-paragraphs in 2.1.1; each element of the marking required in these sub-paragraphs and when appropriate sub-paragraphs h) to j) of 2.1.8 must be clearly separated, e.g. by a slash or space, so as to be easily identified; for examples see 2.1.10; 2.2.3; and 2.3. Any additional markings authorized by the appropriate national authority must still enable the parts of the marking to be correctly identified with reference to 2.1.1.

2.1.8 After reconditioning a packaging, the reconditioner must apply to it, in sequence, a durable marking showing:

- h) the State in which the reconditioning was carried out, indicated by the distinguishing sign for motor vehicles in international traffic;
- i) the name of the reconditioner or other identification of the packaging specified by the appropriate national authority;
- j) the year of reconditioning; the letter "R"; and for every packaging successfully passing the leakproofness test in 4.4, the additional letter "L".

2.1.9 When, after reconditioning, the markings required by 2.1.1 a) to d) no longer appear on the top head or the side of a metal drum, the reconditioner must apply them in a durable form followed by those required by 2.1.8. The markings must not identify a greater performance capability than that for which the original design type had been tested and marked.

2.1.10 Examples of markings for NEW packagings:

*for a new fibreboard box*

 4G/Y145/S/02      as in 2.1.1 a), b), c)1), c)2)B), d)2) and e)  
 NL/VL823              as in 2.1.1 f) and g)

*for a new steel drum to contain liquids*

 1A1/Y1.4/150/98      as in 2.1.1 a), b), c)1), c)2)A), d)1) and e)  
 NL/VL824              as in 2.1.1 f) and g)

for a new steel drum to contain solids, or inner packagings

Ⓢ 1A2/Y150/S/01 as in 2.1.1 a), b), c)1), c)2)B), d)2) and e)  
 NL/VL825 as in 2.1.1 f) and g)

for a new plastic box of equivalent specification

Ⓢ 4HW/Y136/S/98 as in 2.1.1 a), b), c)1), c)2)B), d)2) and e)  
 NL/VL826 as in 2.1.1 f) and g)

for a remanufactured steel drum to contain liquids

Ⓢ 1A2/Y/100/01 as in 2.1.1 a), b), c)1), c)2)A), d)1) and e)  
 USA/MM5 as in 2.1.1 f) and g)

2.1.11 Examples of markings for RECONDITIONED packagings:

Ⓢ 1A1/Y1.4/150/97 as in 2.1.1 a), b), c)1), c)2)A), d)1) and e)  
 NL/RB/01 RL as in 2.1.8 h), i) and j)

Ⓢ 1A2/Y150/S/99 as in 2.1.1 a), b), c)1), c)2)B), d)2) and e)  
 USA/RB/00 R as in 2.1.8 h), i) and j)

## 2.2 PACKAGING MARKINGS FOR INFECTIOUS SUBSTANCES

2.2.1 Packagings for infectious substances, which meet the requirements of Packing Instruction 602 and Chapter 6 of this Part, must be marked with a packaging marking.

2.2.2 The packaging marking consists of:

- a) the United Nations packaging symbol;
- b) the code designating the type of packaging according to the provisions of 1.3;
- c) the text "CLASS 6.2";
- d) the last two digits of the year of manufacture of the packaging;
- e) the State authorizing the allocation of the mark, indicated by the distinguishing sign for motor vehicles in international traffic;
- f) the name of the manufacturer or other identification of the packaging specified by the appropriate national authority.

2.2.3 Example of a marking is:

Ⓢ 4G/CLASS 6.2/01 as in 2.2.2 a), b), c) and d)  
 S/SP-9989-ERIKSSON as in 2.2.2 e) and f)

Each element of the marking applied in accordance with a) to f) must be clearly separated, e.g. by a slash or space, so as to be easily identifiable.

## 2.3 PACKAGING MARKINGS FOR SALVAGE PACKAGINGS

Example of marking for SALVAGE packagings:

Ⓢ 1A2T/Y300/S/01 as in 2.1.1 a), b), c)2)B), d)2) and e)  
 USA/abc as in 2.1.1 f) and g)

*Note.— In the examples given in 2.1.10, 2.2.3 and 2.3, the markings are shown, for convenience, in two lines; however, the markings can be applied in a single line or in multiple lines provided they are given in the correct sequence. Additionally, the inclusion in the specification marking of the "T" symbol is optional.*

## Chapter 3

### REQUIREMENTS FOR PACKAGINGS

#### 3.1 REQUIREMENTS FOR PACKAGINGS OTHER THAN INNER PACKAGINGS

##### 3.1.1 Steel drums

1A1 non-removable head

1A2 removable head

3.1.1.1 Body and heads must be constructed of steel sheet of a suitable type and of adequate thickness in relation to the capacity of the drum and to its intended use.

*Note.— In the case of carbon steel drums, “suitable” steels are identified in ISO 3573:1999 “Hot rolled carbon steel sheet of commercial and drawing qualities” and ISO 3574:1999 “Cold-reduced carbon steel of commercial and drawing qualities”. For carbon steel drums below 100 litres, “suitable” steels in addition to the above standards are also identified in ISO 11949:1995 “Cold-reduced electrolytic tinplate”, ISO 11950:1995 “Cold-reduced electrolytic chromium/chromium oxide-coated steel” and ISO 11951:1995 “Cold-reduced blackplate in coil form for the production of tinplate or electrolytic chromium/chromium oxide-coated steel”.*

3.1.1.2 Body seams must be welded on drums intended to contain more than 40 L of liquids. Body seams must be mechanically seamed or welded on drums intended to contain solids, or 40 L or less of liquids.

3.1.1.3 Chimes must be mechanically seamed or welded. Separate reinforcing rings may be applied.

3.1.1.4 The body of a drum of a capacity greater than 60 L must, in general, have at least two expanded rolling hoops or, alternatively, at least two separate rolling hoops. If there are separate rolling hoops they must be fitted tightly on the body and so secured that they cannot shift. Rolling hoops must not be spot welded.

3.1.1.5 Openings for filling, emptying and venting in the bodies or heads of non-removable head (1A1) drums must not exceed 7 cm in diameter. Drums with larger openings are considered to be of the removable head type (1A2). Closures for openings in the bodies and heads of drums must be so designed and applied that they will remain secure and leakproof under normal conditions of transport. Closure flanges may be mechanically seamed or welded in place. Gaskets or other sealing elements must be used with closures, unless the closure is inherently leakproof.

3.1.1.6 Closure devices for removable head drums must be so designed and applied that they will remain secure and drums will remain leakproof under normal conditions of transport. Gaskets or other sealing elements must be used with all removable heads.

3.1.1.7 If materials used for body, heads, closures and fittings are not in themselves compatible with the contents to be transported, suitable internal protective coatings or treatments must be applied. These coatings or treatments must retain their protective properties under normal conditions of transport.

3.1.1.8 Maximum capacity of drum: 450 L.

3.1.1.9 Maximum net mass: 400 kg.

##### 3.1.2 Aluminium drums

1B1 non-removable head

1B2 removable head

3.1.2.1 Body and heads must be constructed of aluminium at least 99 per cent pure or of an aluminium base alloy. Materials must be of a suitable type and of adequate thickness in relation to the capacity of the drum and to its intended use.

3.1.2.2 All seams must be welded. Chime seams, if any, must be reinforced by the application of separate reinforcing rings.

3.1.2.3 The body of a drum of a capacity greater than 60 L must, in general, have at least two expanded rolling hoops or, alternatively, at least two separate rolling hoops. If there are separate rolling hoops they must be fitted tightly on the body and so secured that they cannot shift. Rolling hoops must not be spot welded.

3.1.2.4 Openings for filling, emptying and venting in the bodies or heads on non-removable head (1B1) drums must not exceed 7 cm in diameter. Drums with larger openings are considered to be of the removable head type (1B2). Closures for

openings in the bodies and heads of drums must be so designed and applied that they will remain secure and leakproof under normal conditions of transport. Closure flanges must be welded in place so that the weld provides a leakproof seam. Gaskets or other sealing elements must be used with closures, unless the closure is inherently leakproof.

3.1.2.5 Closure devices for removable head drums must be so designed and applied that they will remain secure and drums will remain leakproof under normal conditions of transport. Gaskets or other sealing elements must be used with all removable heads.

3.1.2.6 Maximum capacity of drum: 450 L.

3.1.2.7 Maximum net mass: 400 kg.

### 3.1.3 Drums of metal other than aluminium or steel

1N1 non-removable head

1N2 removable head

3.1.3.1 The body and heads must be constructed of a metal or of a metal alloy other than steel or aluminium. Material must be of a suitable type and of adequate thickness in relation to the capacity of the drum and to its intended use.

3.1.3.2 Chime seams, if any, must be reinforced by the application of separate reinforcing rings. All seams, if any, must be joined (welded, soldered, etc.) in accordance with the technical state-of-the-art for the metal or metal alloy used.

3.1.3.3 The body of a drum of a capacity greater than 60 L must, in general, have at least two expanded rolling hoops or, alternatively, at least two separate rolling hoops. If there are separate rolling hoops, they must be fitted tightly on the body and so secured that they cannot shift. Rolling hoops must not be spot welded.

3.1.3.4 Openings for filling, emptying and venting in the bodies or heads or non-removable head (1N1) drums must not exceed 7 cm in diameter. Drums with larger openings are considered to be of the removable head type (1N2). Closures for openings in the bodies and heads of drums must be so designed and applied that they will remain secure and leakproof under normal conditions of transport. Closure flanges must be joined in place (welded, soldered, etc.) in accordance with the technical state of the art for the metal or metal alloy used so that the seam join is leakproof. Gaskets or other sealing elements must be used with closures, unless the closure is inherently leakproof.

3.1.3.5 Closure devices for removable head drums must be so designed and applied that they will remain secure and drums will remain leakproof under normal conditions of transport. Gaskets or other sealing elements must be used with all removable heads.

3.1.3.6 Maximum capacity of drum: 450 L.

3.1.3.7 Maximum net mass: 400 kg.

### 3.1.4 Steel or aluminium jerricans

3A1 steel, non-removable head

3A2 steel, removable head

3B1 aluminium, non-removable head

3B2 aluminium, removable head

3.1.4.1 Body and heads must be constructed of a steel sheet of aluminium at least 99 per cent pure or of an aluminium base alloy. Material must be of a suitable type and of adequate thickness in relation to the capacity of the jerrican and to its intended use.

3.1.4.2 Chimes of steel jerricans must be mechanically seamed or welded. Body seams of steel jerricans intended to contain more than 40 L of liquid must be welded. Body seams of steel jerricans intended to contain 40 L or less must be mechanically seamed or welded. For aluminium jerricans, all seams must be welded. Chime seams, if any, must be reinforced by the application of a separate reinforcing ring.

3.1.4.3 Openings in jerricans (3A1 and 3B1) must not exceed 7 cm in diameter. Jerricans with larger openings are considered to be of the removable head type (3A2 and 3B2). Closures must be so designed that they will remain secure and leakproof under normal conditions of transport. Gaskets or other sealing elements must be used with closures, unless the closure is inherently leakproof.

3.1.4.4 If materials used for body, heads, closures and fittings are not in themselves compatible with the contents to be transported, suitable internal protective coatings or treatments must be applied. These coatings or treatments must retain their protective properties under normal conditions of transport.

3.1.4.5 Maximum capacity of jerrican: 60 L.

3.1.4.6 Maximum net mass: 120 kg.

### 3.1.5 Plywood drums

1D

3.1.5.1 The wood used must be well seasoned, commercially dry and free from any defect likely to lessen the effectiveness of the drum for the purpose intended. If a material other than plywood is used for the manufacture of the heads, it must be of a quality equivalent to the plywood.

3.1.5.2 At least two-ply plywood must be used for the body and at least three-ply plywood for the heads; the plies must be firmly glued together by a water-resistant adhesive with their grain crosswise.

3.1.5.3 The body and heads of the drum and their joins must be of a design appropriate to the capacity of the drum and to its intended use.

3.1.5.4 In order to prevent sifting of the contents, lids must be lined with kraft paper or some other equivalent material which must be securely fastened to the lid and extend to the outside along its full circumference.

3.1.5.5 Maximum capacity of drum: 250 L.

3.1.5.6 Maximum net mass: 400 kg.

### 3.1.6 Fibre drums

1G

3.1.6.1 The body of the drum must consist of multiple plies of heavy paper or fibreboard (without corrugations) firmly glued or laminated together and may include one or more protective layers of bitumen, waxed kraft paper, metal foil, plastic material, etc.

3.1.6.2 Heads must be of natural wood, fibreboard, metal, plywood, plastic or other suitable material and may include one or more protective layers of bitumen, waxed kraft paper, metal foil, plastic material, etc.

3.1.6.3 The body and heads of the drum and their joins must be of a design appropriate to the capacity of the drum and to its intended use.

3.1.6.4 The assembled packaging must be sufficiently water-resistant so as not to delaminate under normal conditions of transport.

3.1.6.5 Maximum capacity of drum: 450 L.

3.1.6.6 Maximum net mass: 400 kg.

### 3.1.7 Plastic drums and jerricans

1H1 drums, non-removable head

1H2 drums, removable head

3H1 jerricans, non-removable head

3H2 jerricans, removable head

3.1.7.1 The packaging must be manufactured from suitable plastic material and be of adequate strength in relation to its capacity and intended use. Except for recycled plastic material as defined in 1;3, no used material other than production residues or regrind from the same manufacturing process may be used. The packaging must be adequately resistant to aging and to degradation caused either by the substance contained or by ultraviolet radiation. Any permeation of the substance contained must not constitute a danger under normal conditions of transport.

3.1.7.2 If protection against ultraviolet radiation is required, it must be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives must be compatible with the contents and remain effective throughout the life of the packaging. Where use is made of carbon black, pigments or inhibitors other than those used in the manufacture of the tested design type, retesting may be waived if the carbon black content does not exceed 2 per cent by mass or if the pigment content does not exceed 3 per cent by mass; the content of inhibitors of ultraviolet radiation is not limited.

3.1.7.3 Additives serving purposes other than protection against ultraviolet radiation may be included in the composition of the plastic material provided that they do not adversely affect the chemical and physical properties of the material of the packaging. In such circumstances retesting may be waived.

3.1.7.4 The wall thickness at every point of the packaging must be appropriate to its capacity and intended use, taking into account the stresses to which each point is liable to be exposed.

3.1.7.5 Openings for filling, emptying and venting in the bodies or heads of non-removable head drums (1H1) and jerricans (3H1) must not exceed 7 cm in diameter. Drums and jerricans with larger openings are considered to be of the removable head type (1H2 and 3H2). Closures for openings in the bodies or heads of drums and jerricans must be so designed and applied that they will remain secure and leakproof under normal conditions of transport. Gaskets or other sealing elements must be used with closures unless the closure is inherently leakproof.

3.1.7.6 Closure devices for removable head drums and jerricans must be so designed and applied that they will remain secure and leakproof under normal conditions of transport. Gaskets must be used with all removable heads unless the drum or jerrican design is such that, where the removable head is properly secured, the drum or jerrican is inherently leakproof.

3.1.7.7 Maximum capacity of drums and jerricans:

1H1, 1H2: 450 L;  
3H1, 3H2: 60 L.

3.1.7.8 Maximum net mass:

1H1, 1H2: 400 kg;  
3H1, 3H2: 120 kg.

### 3.1.8 Boxes of natural wood

4C1 ordinary

4C2 with siftproof walls

3.1.8.1 The wood used must be well seasoned, commercially dry and free from defects that would materially lessen the strength of any part of the box. The strength of the material used and the method of construction must be appropriate to the capacity and intended use of the box. The tops and bottoms may be made of water-resistant reconstituted wood such as hardboard, particle board or other suitable type.

3.1.8.2 Fastenings must be resistant to vibration experienced under normal conditions of transport. End grain nailing must be avoided whenever practicable. Joins which are likely to be highly stressed must be made using clenched or annular ring nails or equivalent fastenings.

3.1.8.3 Box 4C2: each part must consist of one piece or be equivalent thereto. Parts are considered equivalent to one piece when one of the following methods of glued assembly is used: Lindermann joint, tongue and groove joint, ship lap or rabbet joint or butt joint with at least two corrugated metal fasteners at each joint.

3.1.8.4 Maximum net mass: 400 kg.

### 3.1.9 Plywood boxes

4D

3.1.9.1 Plywood used must be at least 3-ply. It must be made from well seasoned rotary cut, sliced or sawn veneer, commercially dry and free from defects that would materially lessen the strength of the box. The strength of the material used and the method of construction must be appropriate to the capacity and intended use of the box. All adjacent plies must be glued with water-resistant adhesive. Other suitable materials may be used together with plywood in the construction of boxes. Boxes must be firmly nailed or screwed to corner posts or ends or be assembled by equally suitable devices.

3.1.9.2 Maximum net mass: 400 kg.

### 3.1.10 Reconstituted wood boxes

4F

3.1.10.1 The walls of boxes must be made of water-resistant reconstituted wood such as hardboard, particle board or other suitable type. The strength of the material used and the method of construction must be appropriate to the capacity of the boxes and their intended use.

3.1.10.2 Other parts of the boxes may be made of other suitable material.

3.1.10.3 Boxes must be securely assembled by means of suitable devices.

3.1.10.4 Maximum net mass: 400 kg.

### 3.1.11 Fibreboard boxes

4G

3.1.11.1 Strong and good quality solid or double-faced corrugated fibreboard (single or multiwall) must be used, appropriate to the capacity of the box and to its intended use. The water resistance of the outer surface must be such that the increase in mass, as determined in a test carried out over a period of 30 minutes by the Cobb method of determining water absorption, is not greater than 155 g/m<sup>2</sup> — see ISO 535:1991. It must have proper bending qualities. Fibreboard must be cut, creased without scoring, and slotted so as to permit assembly without cracking, surface breaks or undue bending. The fluting of corrugated fibreboard must be firmly glued to the facings.

3.1.11.2 The ends of boxes may have a wooden frame or be entirely of wood or other suitable material. Reinforcements of wooden battens or other suitable material may be used.

3.1.11.3 Manufacturing joins in the body of boxes must be taped, lapped and glued or lapped and stitched with metal staples. Lapped joins must have an appropriate overlap.

3.1.11.4 Where closing is effected by gluing or taping, a water-resistant adhesive must be used.

3.1.11.5 Boxes must be designed so as to provide a good fit to the contents.

3.1.11.6 Maximum net mass: 400 kg.

### **3.1.12 Plastic boxes**

4H1 expanded plastic boxes

4H2 solid plastic boxes

3.1.12.1 The box must be manufactured from suitable plastic material and be of adequate strength in relation to its capacity and intended use. The box must be adequately resistant to aging and to degradation caused either by the substance contained or by ultraviolet radiation.

3.1.12.2 An expanded plastic box must comprise two parts made of a moulded expanded plastic material, a bottom section containing cavities for the inner packagings and a top section covering and interlocking with the bottom section. The top and bottom sections must be designed so that the inner packagings fit snugly. The closure cap for any inner packaging must not be in contact with the inside of the top section of this box.

3.1.12.3 For dispatch, an expanded plastic box must be closed with a self-adhesive tape having sufficient tensile strength to prevent the box from opening. The adhesive tape must be weather-resistant and its adhesive compatible with the expanded plastic material of the box. Other closing devices at least equally effective may be used.

3.1.12.4 For solid plastic boxes, protection against ultraviolet radiation, if required, must be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives must be compatible with the contents and remain effective throughout the life of the box. Where use is made of carbon black, pigments or inhibitors other than those used in the manufacture of the tested design type, re-testing may be waived if the carbon black content does not exceed 2 per cent by mass or if the pigment content does not exceed 3 per cent by mass; the content of inhibitors of ultraviolet radiation is not limited.

3.1.12.5 Additives serving purposes other than protection against ultraviolet radiation may be included in the composition of the plastic material provided that they do not adversely affect the chemical or physical properties of the material of the box. Under such circumstances re-testing may be waived.

3.1.12.6 Solid plastic boxes must have closure devices made of a suitable material, of adequate strength and so designed as to prevent the box from unintentional opening.

3.1.12.7 Maximum net mass:

4H1 box: 60 kg;

4H2 box: 400 kg.

### **3.1.13 Steel or aluminium boxes**

4A steel

4B aluminium

3.1.13.1 The strength of the metal and the construction of the box must be appropriate to the capacity of the box and to its intended use.

3.1.13.2 Boxes must be lined with fibreboard or felt packing pieces or must have an inner liner or coating of suitable material as required. If a double seamed metal liner is used, steps must be taken to prevent the ingress of substances, particularly explosives, into the recesses of the seams.

3.1.13.3 Closures may be of any suitable type; they must remain secured under normal conditions of transport.

3.1.13.4 Maximum net mass: 400 kg.

### **3.1.14 Textile bags**

5L2 siftproof

5L3 water-resistant

3.1.14.1 The textiles used must be of good quality. The strength of the fabric and the construction of the bag must be appropriate to the capacity of the bag and to its intended use.

3.1.14.2 Bags, siftproof, 5L2: the bag must be made siftproof, for example by the use of:

- paper bonded to the inner surface of the bag by a water-resistant adhesive such as bitumen; or
- plastic film bonded to the inner surface of the bag; or
- one or more inner liners made of paper or plastic material.

3.1.14.3 Bags, water-resistant, 5L3: to prevent the entry of moisture the bag must be made waterproof, for example by the use of:

- separate inner liners of water-resistant paper (e.g. waxed kraft paper, tarred paper or plastic-coated kraft paper); or
- plastic film bonded to the inner surface of the bag; or
- one or more inner liners made of plastic material.

3.1.14.4 Maximum net mass: 50 kg.

### **3.1.15 Woven plastic bags**

5H1 without inner lining or coating

5H2 siftproof

5H3 water-resistant

3.1.15.1 Bags must be made from stretched tapes or monofilaments of a suitable plastic material. The strength of the material used and the construction of the bag must be appropriate to the capacity of the bag and to its intended use.

3.1.15.2 If the fabric is woven flat, the bags must be made by sewing or some other method ensuring closure of the bottom and one side. If the fabric is tubular, the bag must be closed by sewing, weaving or some other equally strong method of closure.

3.1.15.3 Bags, siftproof, 5H2: The bag must be made siftproof, for example by means of:

- paper or a plastic film bonded to the inner surface of the bag; or
- one or more separate inner liners made of paper or plastic material.

3.1.15.4 Bags, water-resistant, 5H3: To prevent the entry of moisture, the bag must be made waterproof, for example by means of:

- separate inner liners of water-resistant paper (e.g. waxed kraft paper, double-tarred kraft paper or plastic-coated kraft paper); or
- plastic film bonded to the inner or outer surface of the bag; or
- one or more inner plastic liners.

3.1.15.5 Maximum net mass: 50 kg.

### **3.1.16 Plastic film bags**

5H4

3.1.16.1 Bags must be made of a suitable plastic material. The strength of the material used and the construction of the bag must be appropriate to the capacity of the bag and to its intended use. Joins and closures must withstand pressures and impacts liable to occur under normal conditions of transport.

3.1.16.2 Maximum net mass: 50 kg.

### **3.1.17 Paper bags**

5M1 multiwall

5M2 multiwall, water-resistant

3.1.17.1 Bags must be made of a suitable kraft paper or of an equivalent paper with at least three plies, the middle ply of which may be net-cloth and adhesive bonding to the outer paper plies. The strength of the paper and the construction of the bags must be appropriate to the capacity of the bag and to its intended use. Joins and closures must be siftproof.

3.1.17.2 To prevent the entry of moisture, a bag of four plies or more must be made waterproof by the use of either a water-resistant ply as one of the two outermost plies or a water-resistant barrier made of a suitable protective material between

the two outermost plies. A bag of three plies must be made waterproof by the use of a water-resistant ply as the outermost ply. Where there is a danger of the substance contained reacting with moisture or where it is packed damp, a waterproof ply or barrier, such as double-tarred kraft paper, plastic-coated kraft paper, plastic film bonded to the inner surface of the bag, or one or more inner plastic liners, must also be placed next to the substance. Joins and closures must be waterproof.

3.1.17.3 Maximum net mass: 50 kg.

### 3.1.18 Composite packagings (plastic material)

- 6HA1 plastic receptacle with outer steel drum
- 6HA2 plastic receptacle with outer steel crate\*/or box
- 6HB1 plastic receptacle with outer aluminium drum
- 6HB2 plastic receptacle with outer aluminium crate\*/or box
- 6HC plastic receptacle with outer wooden box
- 6HD1 plastic receptacle with outer plywood drum
- 6HD2 plastic receptacle with outer plywood box
- 6HG1 plastic receptacle with outer fibre drum
- 6HG2 plastic receptacle with outer fibreboard box
- 6HH1 plastic receptacle with outer plastic drum
- 6HH2 plastic receptacle with outer solid plastic box

#### 3.1.18.1 Inner receptacle

3.1.18.1.1 The provisions of 3.1.7.1 and 3.1.7.3 to 3.1.7.6 apply to inner plastic receptacles.

3.1.18.1.2 The inner plastic receptacle must fit snugly inside the outer packaging, which must be free of any projection that might abrade the plastic material.

3.1.18.1.3 Maximum capacity of inner receptacles:

6HA1, 6HB1, 6HD1, 6HG1, 6HH1: 250 L;  
6HA2, 6HB2, 6HC, 6HD2, 6HG2, 6HH2: 60 L.

3.1.18.1.4 Maximum net mass:

6HA1, 6HB1, 6HD1, 6HG1, 6HH1: 400 kg;  
6HA2, 6HB2, 6HC, 6HD2, 6HG2, 6HH2: 75 kg.

#### 3.1.18.2 Outer packaging

3.1.18.2.1 Plastic receptacle with outer steel or aluminium drum 6HA1 or 6HB1; the relevant provisions of 3.1.1 or 3.1.2, as appropriate, apply to the construction of the outer packaging.

3.1.18.2.2 Plastic receptacle with outer steel or aluminium box 6HA2 or 6HB2; the relevant provisions of 3.1.13 apply to the construction of the outer packaging.

3.1.18.2.3 Plastic receptacle with outer wooden box 6HC; the relevant provisions of 3.1.8 apply to the construction of the outer packaging.

3.1.18.2.4 Plastic receptacle with outer plywood drum 6HD1; the relevant provisions of 3.1.5 apply to the construction of the outer packaging.

3.1.18.2.5 Plastic receptacle with outer plywood box 6HD2; the relevant provisions of 3.1.9 apply to the construction of the outer packaging.

3.1.18.2.6 Plastic receptacle with outer fibre drum 6HG1; the provisions of 3.1.6.1 to 3.1.6.4 apply to the construction of the outer packaging.

3.1.18.2.7 Plastic receptacle with outer fibreboard box 6HG2; the relevant provisions of 3.1.11 apply to the construction of the outer packaging.

3.1.18.2.8 Plastic receptacle with outer plastic drum 6HH1; the provisions of 3.1.7.1 and 3.1.7.3 to 3.1.7.7 apply to the construction of the outer packaging.

3.1.18.2.9 Plastic receptacle with outer solid plastic box (including corrugated plastic material) 6HH2; the provisions of 3.1.12.1 and 3.1.12.4 to 3.1.12.6 apply to the construction of the outer packaging.

\* Crates are outer packagings with incomplete surfaces. For air transport, crates may not be used as outer packagings of composite packagings.

## 3.2 REQUIREMENTS FOR INNER PACKAGINGS

### 3.2.1 Earthenware, glass or wax (IP.1)

Packagings must be well constructed. The materials of which these packagings and closures are made must be of good quality and, where in contact with the substance or article, not liable to react with it. Closures must be sufficiently tight to prevent leaking and sifting. Stoppers or corks must be held securely in position with wire, adhesive tape, or other positive means. Packagings having necks with moulded screw-threads must have threaded-type caps having a resilient liner completely resistant to the contents.

### 3.2.2 Plastic (IP.2)

Packagings must be well constructed. The materials of which these packagings and closures are made must be of good quality polyethylene or other suitable plastic and, where in contact with the substance, resistant to it. Closures must be sufficiently tight to prevent leaking and sifting. Stoppers or corks must be held securely in position with wire, adhesive tape, or other positive means.

### 3.2.3 Metal cans, tins or tubes (IP.3 and IP.3A)

#### 3.2.3.1 Metal (other than aluminium) IP.3

Packagings must be well constructed and, unless otherwise restricted by the requirements of the packing instructions, the bodies must be made of a metal other than aluminium. Closures may be made of aluminium provided it is compatible both with the contents of the packagings and with the metal(s) used in their construction. The materials of which the packagings and closures are made must be of good quality and, where in contact with the substance, not liable to react with it. Closures must be sufficiently tight to prevent leaking and sifting and threaded-type caps must be equipped with a resilient liner completely resistant to the contents of the packagings.

#### 3.2.3.2 Aluminium IP.3A

Packagings must be well constructed and the bodies must be made from aluminium. Closures may be made of materials other than aluminium provided they are compatible both with the contents of the packagings and with the aluminium. The aluminium and any other materials of which the closures are made must be of good quality and, where in contact with the substance, not liable to react with it. Closures must be sufficiently tight to prevent leaking and sifting and threaded-type caps must be equipped with a resilient liner completely resistant to the contents of the packagings.

### 3.2.4 Multiwall paper bags (IP.4)

Shipping sack kraft paper, or equivalent, of at least two sheets of paper must be used.

### 3.2.5 Plastic bags (IP.5)

The weld-seams and closures of such bags must be siftproof. Plastic bags must have a minimum thickness of 0.1 mm.

### 3.2.6 Fibre cans or boxes (IP.6)

Packagings must be well constructed and the material of which they are made must be of good quality. Metal tops, bottoms and connections, of suitable thickness, are authorized.

### 3.2.7 Metal receptacles (aerosols), non-refillable (IP.7, IP.7A, IP.7B)

#### 3.2.7.1 Receptacles (aerosols) IP.7 and IP.7A

3.2.7.1.1 *Materials and construction.* Uniform quality steel plate or non-ferrous metal of uniform drawing quality must be used:

- IP.7 receptacles must have a minimum wall thickness of 0.18 mm;
- IP.7A receptacles must have a minimum wall thickness of 0.20 mm.

The receptacles may be seamless or with seams welded, soldered, brazed, double-seamed or swaged. The ends must be of pressure design. Maximum capacity must not exceed 820 mL and the maximum inner diameter must not exceed 76 mm.

3.2.7.1.2 *Performance test.* One out of each lot of 25 000 or less receptacles successively produced per day must be pressure-tested to destruction:

- IP.7 receptacles must not burst below 1 650 kPa gauge pressure;
- IP.7A receptacles must not burst below 1 860 kPa gauge pressure.

### 3.2.7.2 Receptacles (aerosols) IP.7B

3.2.7.2.1 *Materials and construction.* Uniform quality steel plate or non-ferrous metal of uniform drawing quality must be used. The receptacles may be seamless or with seams welded, soldered, brazed, double-seamed or swaged. The ends must be of pressure design. Maximum capacity must not exceed 1 000 mL and the maximum inner diameter must not exceed 76 mm. The aerosol, including its valve, must be virtually hermetically sealed under normal conditions of transport and the valve must be suitably protected to prevent actuation during transport.

#### 3.2.7.2.2 Performance tests required:

- hydraulic pressure test;
- bursting test;
- leakage test.

#### 3.2.7.2.3 *Hydraulic pressure test.* Number of samples: six receptacles.

Method of testing and pressure applied: the pressure must be applied slowly. The test pressure must be 50 per cent higher than the internal pressure at 50°C but at least 1 000 kPa. The test pressure must be applied for 25 seconds.

Criteria for passing the test successfully: the receptacle must not show major distortions, leaks or similar faults, but a slight symmetrical distortion of the base, or one affecting the profile of the top end shall be allowed, provided that the receptacle passes the bursting test.

3.2.7.2.4 *Bursting test.* Number of samples: six receptacles; these may be the same receptacles used in the hydraulic pressure test.

Method of testing and pressures applied: a hydraulic pressure at least 20 per cent higher than the test pressure as mentioned in 3.2.7.2.3 must be applied.

Criteria for passing the test successfully: no receptacle may leak.

#### 3.2.7.2.5 *Leakage test.* Number of samples: every aerosol.

Method of testing: each aerosol must be immersed in a bath of water. The temperature of the water and the duration of the test must be such that the internal pressure reaches that which would be reached at 55°C, or 50°C if the liquid phase does not exceed 95 per cent of the capacity of the aerosol at 50°C. When an aerosol is sensitive to heat, the temperature of the bath may be set at between 20°C and 30°C in which case one receptacle in 2 000 must be tested at the higher temperature.

Equally effective methods of testing may also be used.

Criteria for passing the test successfully: the aerosol must not show visible permanent distortions or any leakage.

## 3.2.8 Plastic receptacles (aerosols) non-refillable (IP.7C)

### 3.2.8.1 Receptacles (aerosols) IP.7C

≠ 3.2.8.1.1 *Materials and construction.* The receptacle must be of polyethylene terephthalate (PET), polyethylene naphthalate (PEN), polyamide (Nylon), or a blend containing some combination of PET, PEN, ethyl vinyl alcohol (EVOH) and Nylon. Thermoplastic processes ensuring uniformity of the completed container shall be applied. No used material other than production residues or re-grind from the same manufacturing process may be used. The packaging shall be adequately resistant to aging and to degradation caused either by the substance contained or by ultraviolet radiation. Maximum capacity must not exceed 500 mL.

#### 3.2.8.1.2 Performance tests required:

- drop test;
- hydraulic pressure test;
- bursting test;
- leakage test.

3.2.8.1.3 *Drop test.* Method of testing: to ensure that creep does not affect the ability of the receptacle type to retain the contents the receptacles shall be dropped as follows: three groups of twenty-five filled receptacles shall be dropped from 1.8 m on to a rigid, non-resilient, flat and horizontal surface. One group must be conditioned at 38°C for 26 weeks, the second group for 100 hours at 50°C and the third group for 18 hours at 55°C, prior to the drop test.

Criteria for passing the test successfully: the receptacle must not break or leak.

#### 3.2.8.1.4 *Hydraulic pressure test.* Number of samples: six receptacles.

Method of testing: receptacles must resist a test pressure equal to at least 1 200 kPa.

Criteria for passing the test successfully: the receptacle must not show major distortions, leaks or similar faults, but a slight symmetrical distortion of the base, or one affecting the profile of the top end, shall be allowed, provided that the receptacle passes the bursting test.

3.2.8.1.5 *Bursting test.* Number of samples: six. These may be the same receptacles used in the hydraulic pressure test.

Method of testing and pressures applied: a hydraulic pressure at least 20 per cent higher than the test pressure as mentioned in 3.2.8.1.4 must be applied.

Criteria for passing the test successfully: the receptacle must not leak.

3.2.8.1.6 *Leakage test.* Every aerosol. A leakage test in accordance with 6;5.4.2.2.2 or 6;5.4.3 approved by the competent authority shall be used.

### **3.2.9 Glass ampoules (glass tubes) (IP.8)**

The ampoules must be heat-sealed, gas- and liquid-tight and they must not react chemically when coming into contact with the contents. If such glass tubes are also permitted by the appropriate national authority for liquefied gases, they must be thick-walled and free of defects.

### **3.2.10 Metal or plastic flexible tubes (IP.9)**

The materials of construction of flexible tubes and their closures must, where in contact with the organic peroxide, not affect the thermal stability.

### **3.2.11 Bags, paper with plastic/aluminium (IP.10)**

The bags must be multiwall paper bags lined with plastic and/or aluminium. The weld-seams and closure must be siftproof.

## Chapter 4

### PACKAGING PERFORMANCE TESTS

#### Introductory Notes

*Note 1.— The performance tests specified in this Chapter take account of the material used, and constructional design of packagings. They also take into account whether the goods to be transported are liquid or solid.*

*Note 2.— The performance tests are designed to ensure that there will be no loss of contents under normal transport conditions. The severity of the tests on a packaging is dependent on the intended contents, taking account of the degree of danger (i.e. packing group), relative density and vapour pressure (for liquids).*

#### 4.1 PERFORMANCE AND FREQUENCY OF TESTS

4.1.1 The design type of each packaging must be tested as provided for in this Chapter in accordance with procedures established by the appropriate national authority.

≠ 4.1.2 Each packaging design type must successfully pass the tests prescribed in this chapter before being used. A packaging design type is defined by the design, size, material and thickness, manner of construction and packing, but may include various surface treatments. It also includes packagings which differ from the design type only in their lesser design height.

4.1.3 Tests must be repeated on production samples at intervals established by the appropriate national authority. For such tests on paper or fibreboard packagings, preparation at ambient conditions is considered equivalent to the provisions of 4.2.3.

4.1.4 Tests must also be repeated after each modification which alters the design, material or manner of construction of a packaging.

4.1.5 The appropriate national authority may permit the selective testing of packagings that differ only in minor respects from a tested type, e.g. smaller sizes of inner packagings or inner packagings of lower net mass; and packagings such as drums, bags and boxes which are produced with small reductions in external dimension(s).

4.1.6 Reserved.

*Note.— For the conditions for assembling different inner packagings in an outer packaging and permissible variations in inner packagings, see 4;1.1.9.1.*

4.1.7 Articles or inner packagings of any type for solids or liquids may be assembled and transported, without testing, in an outer packaging under the following conditions:

- a) The outer packaging must have been successfully tested in accordance with 4.3 with fragile (e.g. glass) inner packagings containing liquids using the Packing Group I drop height.
- b) The total combined gross mass of inner packagings must not exceed one-half the gross mass of inner packagings used for the drop test in a) above.
- c) The thickness of cushioning material between inner packagings and between inner packagings and the outside of the packaging must not be reduced below the corresponding thicknesses in the originally tested packaging; and if a single inner packaging was used in the original test, the thicknesses of cushioning between inner packagings must not be less than the thickness of cushioning between the outside of the packaging and the inner packaging in the original test. If either fewer or smaller inner packagings are used (as compared to the inner packagings used in the drop test), sufficient additional cushioning material must be used to take up void spaces.
- d) The outer packaging must have passed successfully the stacking test in 4.6 while empty. The total mass of identical packages must be based on the combined mass of inner packagings used for the drop test in a) above.
- e) Inner packagings containing liquids must be completely surrounded with a sufficient quantity of absorbent material to absorb the entire liquid contents of the inner packagings.
- f) If the outer packaging is intended to contain inner packagings for liquids and is not leakproof, or is intended to contain inner packagings for solids and is not siftproof, a means of containing any liquid or solid contents in the event of

leakage must be provided in the form of a leakproof liner, plastic bag or other equally efficient means of containment. For packagings containing liquids, the absorbent material required by e) above must be placed inside the means of containing the liquid contents.

- g) Inner packagings containing liquids must comply with 4;1.1.6 and 4;1.1.6.1.
- h) Packagings must be marked in accordance with Part 6;2 as having been tested to Packing Group I performance for combination packagings. The marked gross mass in kilograms must be the sum of the mass of the outer packaging plus one half of the mass of the inner packaging(s) as used for the drop test referred to in a) above. Such a packaging mark must also contain a letter "V" as described in 1.2.7.

4.1.8 The appropriate national authority may at any time require proof, by tests in accordance with this Chapter, that serially produced packagings meet the requirements of the design type tests.

4.1.9 If an inner treatment or coating is required for safety reasons, it must retain its protective properties even after the tests.

4.1.10 Provided the validity of the test results is not affected, and with the approval of the appropriate national authority, several tests may be made on one sample.

## 4.2 PREPARATION OF PACKAGINGS FOR TESTING

4.2.1 Tests must be carried out on packagings prepared as for transport including, with respect to combination packagings, the inner packagings used. Inner or single receptacles or packagings must be filled to not less than 98 per cent of their maximum capacity for liquids or 95 per cent for solids. Bags must only be filled to the maximum mass at which they may be used. For other than bags, combination packagings where the inner packaging is designed to carry liquids and solids, separate testing is required for both liquid and solid contents. The substances or articles to be transported in the packaging may be replaced by other substances or articles except where this would invalidate the results of the tests. For solids, when another substance is used it must have the same physical characteristics (mass, grain size, etc.) as the substance to be carried. It is permissible to use additives, such as bags of lead shot, to achieve the requisite total package mass, so long as they are placed so that the test results are not invalidated.

4.2.2 In the drop tests for liquids, when another substance is used, it must be of similar relative density and viscosity to those of the substance being transported. Water may also be used for the liquid drop test under the conditions set forth in 4.3.5.

4.2.3 Paper or fibreboard packagings must be conditioned for at least 24 hours in an atmosphere having a controlled temperature and relative humidity (r.h.). There are three options, one of which must be chosen. The preferred atmosphere is 23°C ± 2°C and 50 per cent ± 2 per cent r.h. The two other options are 20°C ± 2°C and 65 per cent ± 2 per cent r.h., or 27°C ± 2°C and 65 per cent ± 2 per cent r.h.

*Note.— Average values must fall within these limits. Short-term fluctuations and measurement limitations may cause individual measurements to vary by up to ±5 per cent relative humidity without significant impairment of test reproducibility.*

4.2.4 Additional steps must be taken to ascertain that the plastic material used in the manufacture of plastic drums, plastic jerricans and composite packagings (plastic material) intended to contain liquid complies with the provisions in 3.1.7.1, 3.1.7.3 and 4;1.1.3. This may be done, for example, by submitting sample receptacles or packagings to a preliminary test extending over a long period, for example six months, during which the samples would remain filled with the substances they are intended to contain, and after which the samples must be submitted to the applicable tests listed in 4.3, 4.4, 4.5 and 4.6. For substances which may cause stress-cracking or weakening in plastic drums or jerricans, the sample, filled with the substance or another substance that is known to have at least as severe a stress-cracking influence on the plastic materials in question, must be subjected to a superimposed load equivalent to the total mass of identical packages which might be stacked on it during transport. The minimum stacking height, including the test sample, must be 3 m.

## 4.3 DROP TEST

### 4.3.1 Number of test samples (per design type and manufacturer) and drop orientation

For other than flat drops, the centre of gravity must be vertically over the point of impact. Where more than one orientation is possible for a given drop, the orientation most likely to result in failure of the packaging must be used.

### 4.3.2 Special preparation of test samples for the drop test

The temperature of the test sample and its contents must be reduced to -18°C or lower for the following packagings:

- a) plastic drums (see 3.1.7);
- b) plastic jerricans (see 3.1.7);
- c) plastic boxes other than expanded polystyrene boxes (see 3.1.12);
- d) composite packagings (plastic material) (see 3.1.18); and
- e) combination packagings with plastic inner packagings, other than plastic bags intended to contain solids or articles.

Where test samples are prepared in this way, the conditioning specified in 4.2.3 may be waived. Test liquids must be kept in the liquid state by the addition of antifreeze, if necessary.

<i>Packaging</i>	<i>Number of test samples</i>	<i>Drop orientation</i>
Steel drums Aluminium drums Steel jerricans Aluminium jerricans Plywood drums Fibre drums Plastic drums and jerricans Composite packagings which are in the shape of a drum	Six (three for each drop)	First drop (using three samples): the packaging must strike the target diagonally on the chime or, if the packaging has no chime, on a circumferential seam or an edge.  Second drop (using the other three samples): the packaging must strike the target on the weakest part not tested by the first drop, for example a closure or, for some cylindrical drums, the welded longitudinal seam of the drum body.
Boxes of natural wood Plywood boxes Reconstituted wood boxes Fibreboard boxes Plastic boxes Steel or aluminium boxes Composite packagings which are in the shape of a box	Five (one for each drop)	First drop: flat on the bottom Second drop: flat on the top Third drop: flat on the long side Fourth drop: flat on the short side Fifth drop: on a corner
Bags — single-ply without a side seam, or multi-ply	Three (two drops per bag)	First drop: flat on a wide face Second drop: on an end of the bag
Bags — single-ply with a side seam	Three (three drops per bag)	First drop: flat on a wide face Second drop: flat on a narrow face Third drop: on an end of the bag

4.3.3 Removable head packagings for liquids must not be dropped until at least 24 hours after filling and closing to allow for any possible gasket relaxation.

#### 4.3.4 Target

≠ The target must be a non-resilient horizontal surface and must be:

- a) integral and massive enough to be immovable;
- b) flat with a surface kept free from local defects capable of influencing the test results;
- c) rigid enough to be non-deformable under test conditions and not liable to become damaged by the tests; and
- d) sufficiently large to ensure that the test package falls entirely upon the surface.

#### 4.3.5 Drop height

For solids and liquids, if the test is performed with the solid or liquid to be transported or with another substance having essentially the same physical characteristics:

Packing Group I	Packing Group II	Packing Group III
1.8 m	1.2 m	0.8 m

For liquids in single packagings and for inner packagings of combination packagings, if the test is performed with water:

- a) where the substances to be transported have a relative density not exceeding 1.2:

Packing Group I	Packing Group II	Packing Group III
1.8 m	1.2 m	0.8 m

- b) where the substances to be transported have a relative density exceeding 1.2, the drop height must be calculated on the basis of the relative density (d) of the substance to be carried, rounded up to the first decimal, as follows:

Packing Group I	Packing Group II	Packing Group III
$d \times 1.5$ m	$d \times 1.0$ m	$d \times 0.67$ m

*Note.*— The term water includes water/antifreeze solutions with a minimum specific gravity of 0.95 for testing at  $-18^{\circ}\text{C}$ .

#### 4.3.6 Criteria for passing the test

4.3.6.1 Each packaging containing liquid must be leakproof when equilibrium has been reached between the internal and external pressures, except for inner packagings of combination packagings when it is not necessary that the pressures be equalized.

4.3.6.2 Where a packaging for solids undergoes a drop test and its upper face strikes the target, the test sample passes the test if the entire contents are retained by an inner packaging or inner receptacle (e.g. a plastic bag) even if the closure, while retaining its containment function, is no longer siftproof.

4.3.6.3 The packaging or outer packaging of a composite or combination packaging must not exhibit any damage liable to affect safety during transport. There must be no leakage of the filling substance from the inner receptacle or inner packaging(s).

4.3.6.4 Neither the outermost ply of a bag nor an outer packaging may exhibit any damage liable to affect safety during transport.

4.3.6.5 A slight discharge from the closure(s) upon impact is not considered to be a failure of the packaging provided that no further leakage occurs.

4.3.6.6 No rupture is permitted in packagings for goods of Class 1 which would permit the spillage of loose explosive substances or articles from the outer packaging.

#### 4.4 LEAKPROOFNESS TEST

*Note.*— The leakproofness test must be performed on all design types of packagings intended to contain liquids; however, this test is not required for the inner packagings of combination packagings.

4.4.1 Number of test samples: three test samples per design type and manufacturer.

4.4.2 Test method and pressure to be applied: the packagings including their closures must be restrained under water for 5 minutes while an internal air pressure is applied; the method of restraint must not affect the results of the test. The air pressure (gauge) to be applied must be:

Packing Group I	Packing Group II	Packing Group III
Not less than 30 kPa (0.3 bar)	Not less than 20 kPa (0.2 bar)	Not less than 20 kPa (0.2 bar)

Other methods at least equally effective may be used.

4.4.3 Criterion for passing the test: there must be no leakage.

#### 4.5 INTERNAL PRESSURE (HYDRAULIC) TEST

4.5.1 Packagings to be tested: the internal pressure (hydraulic) test must be carried out on all design types of metal, plastic and composite packagings intended to contain liquids. This test is not required for the inner packagings of combination packagings. For the internal pressure requirements for inner packagings see 4;1.1.6.1.

4.5.2 Number of test samples: three test samples per design type and manufacturer.

4.5.3 Test method and pressure to be applied: metal packagings including their closures must be subjected to the test pressure for 5 minutes. Plastic packagings and composite packagings (plastic material) including their closures must be subjected to the test pressure for 30 minutes. This pressure is the one to be included in the marking required by 2.1.1 d). The manner in which the packagings are supported must not invalidate the test. The test pressure must be applied continuously and evenly: it must be kept constant throughout the test period. The hydraulic pressure (gauge) applied, as determined by any one of the following methods, must be:

- a) not less than the total gauge pressure measured in the packaging (i.e. the vapour pressure of the filling liquid and the partial pressure of the air or other inert gases minus 100 kPa) at 55°C, multiplied by a safety factor of 1.5. This total gauge pressure must be determined on the basis of a maximum degree of filling in accordance with Part 4;1.1.5 and a filling temperature of 15°C. The test pressure must be not less than 95 kPa (not less than 75 kPa for liquids in Packing Group III of Class 3 or Division 6.1); or
- b) not less than 1.75 times the vapour pressure at 50°C of the liquid to be transported, minus 100 kPa but with a minimum test pressure of 100 kPa; or
- c) not less than 1.5 times the vapour pressure at 55°C of the liquid to be transported, minus 100 kPa but with a minimum test pressure of 100 kPa.

These are expressed as:

- a)  $P_T = (P_{M55} \times 1.5)$  kPa with minima of 95 or 75 kPa;
- b)  $P_T = (Vp_{50} \times 1.75) - 100$  kPa with a minimum of 100 kPa;
- c)  $P_T = (Vp_{55} \times 1.5) - 100$  kPa with a minimum of 100 kPa;

where:

- $P_T$  = Test pressure in kPa (gauge)
- $P_{M55}$  = Pressure measured in the filled packaging at a temperature of 55°C
- $Vp_{50}$  = Vapour pressure at 50°C
- $Vp_{55}$  = Vapour pressure at 55°C.

4.5.4 In addition, packagings intended to contain liquids of Packing Group I must be tested to a minimum test pressure of 250 kPa (gauge) for a test period of 5 or 30 minutes depending upon the material of construction of the packaging.

4.5.5 Criteria for passing the test: no packaging may leak.

## 4.6 STACKING TEST

4.6.1 All design types of packagings other than bags must be subjected to a stacking test.

4.6.2 Number of test samples: three test samples per design type and manufacturer.

4.6.3 Test method: the test sample must be subjected to a force applied to the top surface of the test sample equivalent to the total weight of identical packages which might be stacked on it during transport: where the contents of the test samples are liquids with a relative density different from that of the liquid to be transported, the force must be calculated in relation to the latter. The minimum height of the stack including the test sample must be 3 m. The duration of the test must be 24 hours except that plastic drums, jerricans and composite packagings (6HH1 and 6HH2) intended for liquids must be subjected to the stacking test for a period of 28 days at a temperature of not less than 40°C.

4.6.4 Criteria for passing the test: no test sample may leak. In composite packagings or combination packagings, there must be no leakage of the filling substance from the inner receptacle or inner packaging. No test sample must show any deterioration which could adversely affect transport safety or any distortion liable to reduce its strength or cause instability in stacks of packages. Plastic packagings must be cooled to ambient temperature before the assessment.

## 4.7 TEST REPORT

4.7.1 A test report containing at least the following particulars must be drawn up and must be available to the users of the packaging:

- a) name and address of the test facility;
- b) name and address of the applicant (where appropriate);
- c) a unique test report identification;
- d) date of the test report;
- e) manufacturer of the packaging;
- f) description of the packaging type (e.g. dimensions, materials, closures, thickness, etc.), including method of manufacture (e.g. blow moulding); drawings and/or photographs may be included;
- g) maximum capacity;
- h) characteristics of the test contents (e.g. the viscosity and relative density for liquids and the particle size for solids);
- i) test descriptions and results;
- j) a signature and name and status of the signatory.

4.7.2 The test report must contain statements that:

- a) the packaging prepared as for transport was tested in accordance with the appropriate provisions of these Instructions or the equivalent provisions of Chapter 6 of the United Nations *Recommendations on the Transport of Dangerous Goods*; and
- b) the use of other packaging methods or components may render it invalid.

4.7.3 A copy of the test report must be made available to the appropriate national authority.

#### 4.8 TEST REQUIREMENTS FOR SALVAGE PACKAGING

Salvage packagings (see 1;3.1) must be tested and marked in accordance with the requirements applicable to Packing Group II packagings intended for the transport of solids or inner packagings, except as follows:

- a) the test substance used in performing the tests must be water, and the packagings must be filled to not less than 98 per cent of their maximum capacity. It is permissible to use additives, such as bags of lead shot, to achieve the requisite total package mass so long as they are placed so that the test results are not affected. In performing the drop test, the drop height must meet the requirements of 4.3;
- b) packagings must have been successfully leakproofness tested at 30 kPa with the test results reflected in the test report required by 4.7.1;
- c) packagings for which retention of liquids is a basic function must, in addition, have been successfully tested in accordance with the internal pressure test specified in 4.5; and
- d) the marking required by 2.1.1 b) must be followed by the letter "T".

## Chapter 5

# REQUIREMENTS FOR THE CONSTRUCTION AND TESTING OF CYLINDERS AND CLOSED CRYOGENIC RECEPTACLES, AEROSOL DISPENSERS AND SMALL RECEPTACLES CONTAINING GAS (GAS CARTRIDGES) AND FUEL CELL CARTRIDGES CONTAINING LIQUEFIED FLAMMABLE GAS

### 5.1 GENERAL REQUIREMENTS

≠ *Note 1.— For aerosol dispensers, small receptacles containing gas (gas cartridges) and fuel cell cartridges containing liquefied flammable gas see 5.4.*

*Note 2.— For open cryogenic receptacles the requirements of Packing Instruction 202 must be met.*

#### 5.1.1 Design and construction

5.1.1.1 Cylinders and closed cryogenic receptacles and their closures must be designed, manufactured, tested and equipped in such a way as to withstand all conditions, including fatigue, to which they will be subjected during normal conditions of transport.

5.1.1.2 In recognition of scientific and technological advances, and recognizing that cylinders and closed cryogenic receptacles other than those that are marked with a UN certification marking may be used on a national or regional basis, cylinders and closed cryogenic receptacles conforming to requirements other than those specified in these Instructions may be used if approved by the appropriate national authorities in the countries of transport and use.

5.1.1.3 In no case must the minimum wall thickness be less than that specified in the design and construction technical standards.

5.1.1.4 For welded cylinders and closed cryogenic receptacles, only metals of weldable quality must be used.

5.1.1.5 The test pressure of cylinders must be in accordance with Packing Instruction 200. The test pressure for closed cryogenic receptacles must be in accordance with Packing Instruction 202.

5.1.1.6 Not used.

5.1.1.7 Contact between dissimilar metals which could result in damage by galvanic action must be avoided.

5.1.1.8 The following additional requirements apply to the construction of closed cryogenic receptacles for refrigerated liquefied gases.

5.1.1.8.1 The mechanical properties of the metal used must be established for each closed cryogenic receptacle, including the impact strength and the bending coefficient.

5.1.1.8.2 The closed cryogenic receptacles must be thermally insulated. The thermal insulation must be protected against impact by means of a jacket. If the space between the closed cryogenic receptacle and the jacket is evacuated of air (vacuum-insulation), the jacket must be designed to withstand without permanent deformation an external pressure of at least 100 kPa (1 bar) calculated in accordance with a recognized technical code or a calculated critical collapsing pressure of not less than 200 kPa (2 bar) gauge pressure. If the jacket is so closed as to be gas-tight (e.g. in the case of vacuum-insulation), a device must be provided to prevent any dangerous pressure from developing in the insulating layer in the event of inadequate gas-tightness of the closed cryogenic receptacle or its fittings. The device must prevent moisture from penetrating into the insulation.

5.1.1.8.3 Closed cryogenic receptacles intended for the transport of refrigerated liquefied gases having a boiling point below  $-182^{\circ}\text{C}$  at atmospheric pressure must not include materials that may react with oxygen or oxygen-enriched atmospheres in a dangerous manner when located in parts of the thermal insulation where there is a risk of contact with oxygen or oxygen-enriched liquid.

5.1.1.8.4 Closed cryogenic receptacles must be designed and constructed with suitable lifting and securing arrangements.

+ 5.1.1.9 Additional requirements for the construction of pressure receptacles for acetylene

Cylinders for UN 1001— **Acetylene, dissolved** and UN 3374 — **Acetylene, solvent free** must be filled with a porous mass, uniformly distributed, of a type that conforms to the requirements and testing specified by the appropriate national authority and which:

- a) is compatible with the cylinder and does not form harmful or dangerous compounds either with the acetylene or with the solvent in the case of UN 1001; and
- b) is capable of preventing the spread of decomposition of the acetylene in the porous mass.

In the case of UN 1001, the solvent must be compatible with the cylinders.

### 5.1.2 Materials

5.1.2.1 Construction materials of cylinders and closed cryogenic receptacles and their closures which are in direct contact with dangerous goods must not be affected or weakened by the dangerous goods intended and must not cause a dangerous effect (e.g. catalysing a reaction or reacting with the dangerous goods).

5.1.2.2 Cylinders and closed cryogenic receptacles and their closures must be made of the materials specified in the design and construction technical standards and the applicable packing instruction for the substances intended for transport in the cylinder and closed cryogenic receptacle. The materials must be resistant to brittle fracture and to stress corrosion cracking as indicated in the design and construction technical standards.

### 5.1.3 Service equipment

≠ 5.1.3.1 Valves, piping and other fittings subjected to pressure, excluding pressure relief devices, must be designed and constructed so that the burst pressure is at least 1.5 times the test pressure of the cylinders and closed cryogenic receptacles.

5.1.3.2 Service equipment must be configured or designed to prevent damage that could result in the release of the cylinder and closed cryogenic receptacle contents during normal conditions of handling and transport. The filling and discharge valves and any protective caps must be capable of being secured against unintended opening. Valves must be protected as specified in 4;4.1.1.8.

5.1.3.3 Cylinders and closed cryogenic receptacles that are not capable of being handled manually or rolled must be fitted with devices (skids, rings, straps) ensuring that they can be safely handled by mechanical means and arranged so as not to impair the strength of, nor cause undue stresses in, the cylinder and closed cryogenic receptacle.

5.1.3.4 Individual cylinders and closed cryogenic receptacles must be equipped with pressure relief devices as specified in Packing Instruction 200(1) or 202, or 5.1.3.6.4 and 5.1.3.6.5. Pressure-relief devices must be designed to prevent the entry of foreign matter, the leakage of gas and the development of any dangerous excess pressure.

5.1.3.5 Cylinders and closed cryogenic receptacles whose filling is measured by volume must be provided with a level indicator.

#### 5.1.3.6 *Additional requirements for closed cryogenic receptacles*

5.1.3.6.1 Not used.

5.1.3.6.2 For sections of piping which can be closed at both ends and where liquid product can be trapped, a method of automatic pressure-relief must be provided to prevent excess pressure build-up within the piping.

5.1.3.6.3 Each connection to a closed cryogenic receptacle must be clearly marked to indicate its function (e.g. vapour or liquid phase).

#### 5.1.3.6.4 *Pressure-relief devices*

5.1.3.6.4.1 Every closed cryogenic receptacle, having a nominal capacity in excess of 550 L, must be provided with at least two pressure-relief devices. The pressure-relief device must be of the type that will resist dynamic forces including surge.

5.1.3.6.4.2 Closed cryogenic receptacles, having a nominal capacity of 550 L or less, must be provided with at least one pressure-relief device and may, in addition have a frangible disc in parallel with the spring-loaded device in order to meet the requirements of 5.1.3.6.5. The pressure-relief device must be of the type that will resist dynamic forces including surge.

5.1.3.6.4.3 Connections to pressure-relief devices must be of sufficient size to enable the required discharge to pass unrestricted to the pressure-relief device.

5.1.3.6.4.4 All pressure-relief device inlets must, under maximum filling conditions, be situated in the vapour space of the closed cryogenic receptacle and the devices must be so arranged as to ensure that the escaping vapour is discharged unrestrictedly.

5.1.3.6.5 *Capacity and setting of pressure-relief devices*

*Note.— In relation to pressure-relief devices, MAWP means the maximum effective gauge pressure permissible at the top of a loaded closed cryogenic receptacle in its operating position including the highest effective pressure during filling and discharge.*

5.1.3.6.5.1 The pressure-relief device must open automatically at a pressure not less than the MAWP and be fully open at a pressure equal to 110 per cent of the MAWP. It must, after discharge, close at a pressure not lower than 10 per cent below the pressure at which discharge starts and must remain closed at all lower pressures.

5.1.3.6.5.2 Not used.

5.1.3.6.5.3 In the case of the loss of vacuum in a vacuum-insulated closed cryogenic receptacle, the combined capacity of all pressure-relief devices installed must be sufficient so that the pressure (including accumulation) inside the closed cryogenic receptacle does not exceed 120 per cent of the MAWP.

5.1.3.6.5.4 The required capacity of the pressure-relief devices must be calculated in accordance with an established technical code recognized by the appropriate national authority. (See, for example, the Compressed Gas Association (CGA) Publications S-1.2-2003 and S-1.1-2003.)

+

#### 5.1.4 Approval of cylinders and closed cryogenic receptacles

5.1.4.1 The conformity of cylinders and closed cryogenic receptacles must be assessed at the time of manufacture as required by the appropriate national authority. Cylinders and closed cryogenic receptacles must be inspected, tested and approved by an inspection body. The technical documentation must include full specifications on design and construction, and full documentation on the manufacturing and testing.

5.1.4.2 Quality assurance systems must conform to the requirements of the appropriate national authority.

#### 5.1.5 Initial inspection and testing

5.1.5.1 New cylinders must be subjected to inspection and testing during and after manufacture in accordance with the applicable design standards including the following:

On an adequate sample of cylinders:

- a) testing of the mechanical characteristics of the material of construction;
- b) verification of the minimum wall thickness;
- c) verification of the homogeneity of the material for each manufacturing batch;
- d) inspection of the external and internal conditions of the cylinders;
- e) inspection of the neck threads;
- f) verification of the conformance with the design standard;

For all cylinders:

- g) a hydraulic pressure test. Cylinders must withstand the test pressure without expansion greater than that allowed in the design specifications;

*Note.— With the agreement of the appropriate national authority, the hydraulic pressure test may be replaced by a test using a gas, where such an operation does not entail any danger.*

- h) inspection and assessment of manufacturing defects and either repairing them or rendering the cylinders unserviceable. In the case of welded cylinders, particular attention must be paid to the quality of the welds;
- i) an inspection of the markings on the cylinders;
- j) in addition, cylinders intended for the transport of UN 1001 — **Acetylene, dissolved**, and UN 3374 — **Acetylene, solvent free**, must be inspected to ensure proper installation and condition of the porous mass and, if applicable, the quantity of solvent.

5.1.5.2 On an adequate sample of closed cryogenic receptacles, the inspections and tests specified in 5.1.5.1 a), b), d) and f) must be performed. In addition, welds must be inspected by radiographic, ultrasonic or another suitable non-destructive test method on a sample of closed cryogenic receptacles according to the applicable design and construction standard. This weld inspection does not apply to the jacket. Additionally, all closed cryogenic receptacles must undergo the inspections and tests specified in 5.1.5.1 g), h) and i), as well as a leakproofness test and a test of the satisfactory operation of the service equipment after assembly.

### 5.1.6 Periodic inspection and testing

5.1.6.1 Refillable cylinders must be subjected to periodic inspections and tests by a body authorized by the appropriate national authority, in accordance with the following:

- a) check of the external conditions of the cylinder and verification of the equipment and the external markings;
- b) check of the internal conditions of the cylinder (e.g. internal inspection, verification of minimum wall thickness);
- c) check of the threads if there is evidence of corrosion or if the fittings are removed;
- d) a hydraulic pressure test and, if necessary, verification of the characteristics of the material by suitable tests;

*Note 1.— With the agreement of the appropriate national authority, the hydraulic pressure test may be replaced by a test using a gas, where such an operation does not entail any danger.*

*Note 2.— With the agreement of the appropriate national authority, the hydraulic pressure test of cylinders may be replaced by an equivalent method based on acoustic emission testing, ultrasonic examination or a combination of acoustic emission testing and ultrasound examination.*

- + e) check of service equipment, other accessories and pressure-relief devices, if to be reintroduced into service.

≠ 5.1.6.2 Cylinders intended for the transport of UN 1001 — **Acetylene, dissolved**, and UN 3374 — **Acetylene, solvent free**, must be examined only as specified in 5.1.6.1 a), c) and e). In addition, the condition of the porous material (e.g. cracks, top clearance, loosening, settlement) must be examined.

>

### 5.1.7 Requirements for manufacturers

5.1.7.1 The manufacturer must be technically able and must possess all resources required for the satisfactory manufacture of cylinders and closed cryogenic receptacles; this relates in particular to qualified personnel:

- a) to supervise the entire manufacturing process;
- b) to carry out joining of materials; and
- c) to carry out the relevant tests.

5.1.7.2 The proficiency test of a manufacturer must in all instances be carried out by an inspection body approved by the appropriate national authority of the country of approval.

### 5.1.8 Requirements for inspection bodies

Inspection bodies must be independent from manufacturing enterprises and competent to perform the tests, inspections and approvals required.

## 5.2 REQUIREMENTS FOR UN CYLINDERS AND CLOSED CRYOGENIC RECEPTACLES

In addition to the general requirements of 5.1, UN cylinders and closed cryogenic receptacles must comply with the requirements of this section, including the standards, as applicable.

*Note.— With the agreement of the appropriate national authority, more recently published versions of the standards, if available, may be used.*

### 5.2.1 Design, construction and initial inspection and testing

5.2.1.1 The following standards apply for the design, construction and initial inspection and test of UN cylinders, except that inspection requirements related to the conformity assessment system and approval must be in accordance with 5.2.5:

ISO 9809-1:1999 Gas cylinders — Refillable seamless steel gas cylinders — Design, construction and testing — Part 1: Quenched and tempered steel cylinders with tensile strength less than 1 100 MPa.

*Note.— The note concerning the F factor in section 7.3 of this standard must not be applied for UN cylinders.*

ISO 9809-2:2000 Gas cylinders — Refillable seamless steel gas cylinders — Design, construction and testing — Part 2: Quenched and tempered steel cylinders with tensile strength greater than or equal to 1 100 MPa.

ISO 9809-3:2000 Gas cylinders — Refillable seamless steel gas cylinders — Design, construction and testing — Part 3: Normalized steel cylinders.

ISO 7866:1999 Gas cylinders — Refillable seamless aluminium alloy gas cylinders — Design, construction and testing.

*Note.— The note concerning the F factor in section 7.2 of this standard must not be applied for UN cylinders. Aluminium alloy 6351A — T6 or equivalent must not be authorized.*

ISO 11118:1999 Gas cylinders — Non-refillable metallic gas cylinders — Specification and test methods.

ISO 11119-1:2002 Gas cylinders of composite construction — Specification and test methods — Part 1: Hoop wrapped composite gas cylinders.

ISO 11119-2:2002 Gas cylinders of composite construction — Specification and test methods — Part 2: Fully wrapped fibre reinforced composite gas cylinders with load-sharing metal liners.

ISO 11119-3:2002 Gas cylinders of composite construction — Specification and test methods — Part 3: Fully wrapped fibre reinforced composite gas cylinders with non-load-sharing metallic or non-metallic liners.

*Note.— After the first 15 years of service, composite cylinders manufactured according to these standards, may be approved for extended service by the appropriate national authority which was responsible for the original approval of the cylinders and which will base its decision on the test information supplied by the manufacturer or owner or user.*

5.2.1.2 Not used.

5.2.1.3 The following standards apply for the design, construction and initial inspection and test of UN acetylene cylinders except that inspection requirements related to the conformity assessment system and approval must be in accordance with 5.2.5.

*Note.— The maximum of 1 000 L volume as mentioned in the ISO standard ISO 21029-1:2004 Cryogenic vessels, does not apply for refrigerated liquefied gases in closed cryogenic receptacles installed in apparatus ( e.g. MRI or cooling machines).*

For the cylinder shell:

ISO 9809-1:1999 Gas cylinders — Refillable seamless steel gas cylinders — Design, construction and testing — Part 1: Quenched and tempered steel cylinders with tensile strength less than 1 100 MPa.

*Note.— The note concerning the F factor in section 7.3 of this standard must not be applied for UN cylinders.*

ISO 9809-3:2000 Gas cylinders — Refillable seamless steel gas cylinders — Design, construction and testing — Part 3: Normalized steel cylinders.

>

For the porous mass in the cylinder:

ISO 3807-1:2000 Cylinders for acetylene — Basic requirements — Part 1: Cylinders without fusible plugs.

ISO 3807-2:2000 Cylinders for acetylene — Basic requirements — Part 2: Cylinders with fusible plugs.

5.2.1.4 The following standard applies for the design, construction and initial inspection and test of UN closed cryogenic receptacles, except that inspection requirements related to the conformity assessment system and approval must be in accordance with 5.2.5:

ISO 21029-1:2004 Cryogenic vessels — Transportable vacuum insulated vessels of not more than 1 000 L volume — Part 1: Design, fabrication, inspection and tests.

## 5.2.2 Materials

In addition to the material requirements specified in the cylinder and closed cryogenic receptacle design and construction standards, and any restrictions specified in the applicable Packing Instruction for the gas(es) to be transported (e.g. Packing Instruction 200 or Packing Instruction 202), the following standards apply to material compatibility:

ISO 11114-1:1997 Transportable gas cylinders — Compatibility of cylinder and valve materials with gas contents — Part 1: Metallic materials.

ISO 11114-2:2000 Transportable gas cylinders — Compatibility of cylinder and valve materials with gas contents — Part 2: Non-metallic materials.

+ *Note.*— The limitations imposed in ISO 11114-1 on high strength steel alloys at ultimate tensile strength levels up to 1 100 MPa do not apply to **Silane** (UN 2203).

### 5.2.3 Service equipment

The following standards apply to closures and their protection:

ISO 11117:1998 Gas cylinders — Valve protection caps and valve guards for industrial and medical gas cylinders — Design, construction and tests.

ISO 10297:1999 Gas cylinders — Refillable gas cylinder valves — Specification and type testing.

### 5.2.4 Periodic inspection and test

The following standards apply to the periodic inspection and testing of UN cylinders:

≠ ISO 6406:2005 Seamless steel gas cylinders — Periodic inspection and testing.

≠ ISO 10461:2005/A1:2006 Seamless aluminium-alloy gas cylinders — Periodic inspection and testing.

≠ ISO 10462:2005 Transportable cylinders for dissolved acetylene — Periodic inspection and maintenance.

SO 11623:2002 Transportable gas cylinders — Periodic inspection and testing of composite gas cylinders.

### 5.2.5 Conformity assessment system and approval for manufacture of cylinders and closed cryogenic receptacles

#### 5.2.5.1 Definitions

For the purposes of this section:

*Conformity assessment system:* a system for appropriate national authority approval of a manufacturer, by cylinder and closed cryogenic receptacle design type approval, approval of manufacturer's quality system and approval of inspection bodies.

*Design type:* a cylinder and closed cryogenic receptacle design as specified by a particular cylinder and closed cryogenic receptacle standard.

*Verify:* confirm by examination or provision of objective evidence that specified requirements have been fulfilled.

#### 5.2.5.2 General requirements

##### 5.2.5.2.1 Appropriate national authority

5.2.5.2.1.1 The appropriate national authority that approves the cylinder and closed cryogenic receptacle must approve the conformity assessment system for the purpose of ensuring that cylinders and closed cryogenic receptacles conform to the requirements of these Instructions. In instances where the appropriate national authority that approves a cylinder and closed cryogenic receptacle is not the appropriate national authority in the country of manufacture, the marks of the approval country and the country of manufacture must be indicated in the cylinder and closed cryogenic receptacle marking (see 5.2.7 and 5.2.8). The appropriate national authority of the country of approval must supply to its counterpart in a country of use, upon request, evidence demonstrating compliance to this conformity assessment system.

5.2.5.2.2 The appropriate national authority may delegate its conformity assessment system functions in whole or in part.

5.2.5.2.3 The appropriate national authority must ensure that a current list of approved inspection bodies and their identity marks and approved manufacturers and their identity marks is available.

##### 5.2.5.2.4 Inspection body

5.2.5.2.4.1 The inspection body must be approved by the appropriate national authority for the inspection of cylinders and closed cryogenic receptacles and must:

- a) have a staff with an organizational structure, capable, trained, competent and skilled, to satisfactorily perform its technical functions;

- b) have access to suitable and adequate facilities and equipment;
- c) operate in an impartial manner and be free from any influence which could prevent it from doing so;
- d) ensure commercial confidentiality of the commercial and proprietary activities of the manufacturer and other bodies;
- e) maintain clear demarcation between actual inspection body functions and unrelated functions;
- f) operate a documented quality system;
- g) ensure that the tests and inspections specified in the relevant cylinder and closed cryogenic receptacle standard and these instructions are performed; and
- h) maintain an effective and appropriate report and record system in accordance with 5.2.5.6.

5.2.5.2.5 The inspection body must perform design type approval, and cylinder and closed cryogenic receptacle production testing, inspection and certification to verify conformity with the relevant cylinder and closed cryogenic receptacle standard (see 5.2.5.4 and 5.2.5.5).

#### 5.2.5.2.6 *Manufacturer*

The manufacturer must:

- a) operate a documented quality system in accordance with 5.2.5.3;
- b) apply for design type approvals in accordance with 5.2.5.4;
- c) select an inspection body from the list of approved inspection bodies maintained by the appropriate national authority in the country of approval; and
- d) maintain records in accordance with 5.2.5.6.

#### 5.2.5.2.7 *Testing laboratory*

The testing laboratory must have:

- a) staff with an organizational structure, sufficient in number, competence and skill; and
- b) suitable and adequate facilities and equipment to perform, to the satisfaction of the inspection body, the tests required by the manufacturing standard.

#### 5.2.5.3 *Manufacturer's quality system*

5.2.5.3.1 The quality system must contain all the elements, requirements and provisions adopted by the manufacturer. It must be documented in a systematic and orderly manner in the form of written policies, procedures and instructions.

The contents must in particular include adequate descriptions of:

- a) the organizational structure and responsibilities of personnel with regard to design and product quality;
- b) the design control and design verification techniques, processes and procedures that will be used when designing the cylinders and closed cryogenic receptacles;
- c) the relevant cylinder and closed cryogenic receptacle manufacturing, quality control, quality assurance, and process operation instructions that will be used;
- d) quality records, such as inspection reports, test data and calibration data;
- e) management reviews to ensure the effective operation of the quality system arising from the audits in accordance with 5.2.5.3.2;
- f) the process describing how customer requirements are met;
- g) the process for control of documents and their revision;
- h) the means for control of non-conforming cylinders and closed cryogenic receptacles, purchased components, in-process and final materials; and
- i) training programmes and qualification procedures for relevant personnel.

#### 5.2.5.3.2 *Audit of the quality system*

5.2.5.3.2.1 The quality system must be initially assessed to determine whether it meets the requirements in 5.2.5.3.1 to the satisfaction of the appropriate national authority.

5.2.5.3.2.2 The manufacturer must be notified of the results of the audit. The notification must contain the conclusions of the audit and any corrective actions required.

5.2.5.3.2.3 Periodic audits must be carried out, to the satisfaction of the appropriate national authority, to ensure that the manufacturer maintains and applies the quality system. Reports of the periodic audits must be provided to the manufacturer.

#### 5.2.5.3.3 *Maintenance of the quality system*

5.2.5.3.3.1 The manufacturer must maintain the quality system as approved in order that it remains adequate and efficient.

5.2.5.3.3.2 The manufacturer must notify the appropriate national authority that approved the quality system, of any intended changes. The proposed changes must be evaluated in order to determine whether the amended quality system will still satisfy the requirements in 5.2.5.3.1.

#### 5.2.5.4 *Approval process*

##### 5.2.5.4.1 *Initial design type approval*

The initial design type approval must consist of the approval of the manufacturer's quality system and the approval of the cylinder and closed cryogenic receptacle design to be produced. An application for an initial design type approval must meet the requirements of 5.2.5.4.2 to 5.2.5.4.6 and 5.2.5.4.9.

5.2.5.4.2 A manufacturer desiring to produce cylinders and closed cryogenic receptacles in accordance with a cylinder and closed cryogenic receptacle standard and these Instructions must apply for, obtain and retain a Design Type Approval Certificate issued by the appropriate national authority in the country of approval for at least one cylinder and closed cryogenic receptacle design type in accordance with the procedure given in 5.2.5.4.9. This certificate must, on request, be submitted to the appropriate national authority of the country of use.

5.2.5.4.3 An application must be made for each manufacturing facility and must include:

- a) the name and registered address of the manufacturer and, in addition, if the application is submitted by an authorized representative, its name and address;
- b) the address of the manufacturing facility (if different from the above);
- c) the name and title of the person(s) responsible for the quality system;
- d) the designation of the cylinder and closed cryogenic receptacle and the relevant cylinder and closed cryogenic receptacle standard;
- e) details of any refusal of approval of a similar application by any other appropriate national authority;
- f) the identity of the inspection body for design type approval;
- g) documentation on the manufacturing facility as specified under 5.2.5.3.1;
- h) the technical documentation required for design type approval, which must enable verification of the conformity of the cylinders and closed cryogenic receptacles with the requirements of the relevant cylinder and closed cryogenic receptacle design standard. The technical documentation must cover the design and method of manufacture and must contain, as far as is relevant for assessment, at least the following:
  - i) cylinder and closed cryogenic receptacle design standard, design and manufacturing drawings, showing components and sub-assemblies, if any;
  - ii) descriptions and explanations necessary for the understanding of the drawings and intended use of the cylinders and closed cryogenic receptacles;
  - iii) a list of the standards necessary to fully define the manufacturing process;
  - iv) design calculations and material specifications; and
  - v) design type approval test reports, describing the results of examinations and tests carried out in accordance with 5.2.5.4.9.

5.2.5.4.4 An initial audit in accordance with 5.2.5.3.2 must be performed to the satisfaction of the appropriate national authority.

5.2.5.4.5 If the manufacturer is denied approval, the appropriate national authority must provide written detailed reasons for such denial.

5.2.5.4.6 Following approval, changes to the information submitted under 5.2.5.4.3 relating to the initial approval must be provided to the appropriate national authority.

5.2.5.4.7 *Subsequent design type approvals*

An application for a subsequent design type approval must encompass the requirements of 5.2.5.4.8 and 5.2.5.4.9, provided a manufacturer is in possession of an initial design type approval. In such a case, the manufacturer's quality system according to 5.2.5.3 must have been approved during the initial design type approval and must be applicable for the new design.

5.2.5.4.8 The application must include:

- a) the name and address of the manufacturer and, in addition, if the application is submitted by an authorized representative, its name and address;
- b) details of any refusal of approval of a similar application by any other appropriate national authority;
- c) evidence that initial design type approval has been granted; and
- d) the technical documentation, as described in 5.2.5.4.3 h).

5.2.5.4.9 *Procedure for design type approval*

5.2.5.4.9.1 The inspection body must:

- a) examine the technical documentation to verify that:
  - i) the design is in accordance with the relevant provisions of the standard; and
  - ii) the prototype lot has been manufactured in conformity with the technical documentation and is representative of the design;
- b) verify that the production inspections have been carried out as required in accordance with 5.2.5.5;
- c) select cylinders and closed cryogenic receptacles from a prototype production lot and supervise the tests of these cylinders and closed cryogenic receptacles as required for design type approval;
- d) perform or have performed the examinations and tests specified in the cylinder and closed cryogenic receptacle standard to determine that:
  - i) the standard has been applied and fulfilled; and
  - ii) the procedures adopted by the manufacturer meet the requirements of the standard; and
- e) ensure that the various type approval examinations and tests are correctly and competently carried out.

5.2.5.4.9.2 After prototype testing has been carried out with satisfactory results and all applicable requirements of 5.2.5.4 have been satisfied, a Design Type Approval Certificate must be issued which must include the name and address of the manufacturer, results and conclusions of the examination, and the necessary data for identification of the design type.

5.2.5.4.9.3 If the manufacturer is denied a design type approval, the appropriate national authority must provide written detailed reasons for such denial.

5.2.5.4.10 *Modifications to approved design types*

The manufacturer must either:

- a) inform the issuing appropriate national authority of modifications to the approved design type, where such modifications do not constitute a new design, as specified in the cylinder and closed cryogenic receptacle standard; or
- b) request a subsequent design type approval where such modifications constitute a new design according to the relevant cylinder and closed cryogenic receptacle standard. This additional approval must be given in the form of an amendment to the original Design Type Approval Certificate.

5.2.5.4.11 Upon request, the appropriate national authority must communicate to any other appropriate national authority, information concerning design type approval, modifications of approvals, and withdrawn approvals.

#### 5.2.5.5 *Production inspection and certification*

5.2.5.5.1 An inspection body, or its delegate, must carry out the inspection and certification of each cylinder. The inspection body selected by the manufacturer for inspection and testing during production may be different from the inspection body used for the design type approval testing.

5.2.5.5.2 Where it can be demonstrated to the satisfaction of the inspection body that the manufacturer has trained and competent inspectors, independent of the manufacturing operations, inspection may be performed by those inspectors. In such a case, the manufacturer must maintain training records of the inspectors.

5.2.5.5.3 The inspection body must verify that the inspections by the manufacturer and tests performed on those cylinders and closed cryogenic receptacles, fully conform to the standards and requirements of these Instructions. Should non-conformance in conjunction with this inspection and testing be determined, the permission to have inspection performed by the manufacturer's inspectors may be withdrawn.

5.2.5.5.4 The manufacturer must, after approval by the inspection body, make a declaration of conformity with the certified design type. The application of the cylinder and closed cryogenic receptacle certification marking must be considered a declaration that the cylinder and closed cryogenic receptacle comply with the applicable cylinder and closed cryogenic receptacle standards, the requirements of this conformity assessment system and these Instructions. The inspection body must affix or delegate the manufacturer to affix the cylinder and closed cryogenic receptacle certification marking and the registered mark of the inspection body to each approved cylinder or closed cryogenic receptacle.

5.2.5.5.5 A certificate of compliance, signed by the inspection body and the manufacturer, must be issued before the cylinders and closed cryogenic receptacles are filled.

#### 5.2.5.6 *Records*

Design type approval and certificate of compliance records must be retained by the manufacturer and the inspection body for not less than 20 years.

### 5.2.6 **Approval system for periodic inspection and test of cylinders and closed cryogenic receptacles**

#### 5.2.6.1 *Definitions*

For the purposes of this section:

**Approval system:** means a system for the appropriate national authority approval of a body performing the periodic inspection and test of cylinders and closed cryogenic receptacles (hereinafter referred to as "periodic inspection and test body"), including approval of that body's quality system.

#### 5.2.6.2 *General requirements*

##### 5.2.6.2.1 *Appropriate national authority*

5.2.6.2.1.1 The appropriate national authority must establish an approval system for the purpose of ensuring that the periodic inspection and test of cylinders and closed cryogenic receptacles conform to the requirements of these Instructions. In instances where the appropriate national authority that approves the body performing periodic inspection and test of a cylinder and closed cryogenic receptacle is not the appropriate national authority of the country approving the manufacture of the cylinder, the marks of the approval country of periodic inspection and test must be indicated in the cylinder and closed cryogenic receptacle marking (see 5.2.7).

5.2.6.2.1.2 The appropriate national authority of the country of approval for the periodic inspection and test must supply, upon request, evidence demonstrating compliance with this approval system, including the records of the periodic inspection and test, to its counterpart in a country of use.

5.2.6.2.1.3 The appropriate national authority of the country of approval may terminate the approval certificate referred to in 5.2.6.4.1 upon evidence demonstrating non-compliance with the approval system.

5.2.6.2.2 The appropriate national authority may delegate its functions in this approval system, in whole or in part.

5.2.6.2.3 The appropriate national authority must ensure that a current list of approved periodic inspection and test bodies and their identity marks is available.

##### 5.2.6.2.4 *Periodic inspection and test body*

The periodic inspection and test body must be approved by the appropriate national authority and must:

- a) have a staff with an organizational structure, capable, trained, competent and skilled to satisfactorily perform its technical functions;

- b) have access to suitable and adequate facilities and equipment;
- c) operate in an impartial manner and be free from any influence that could prevent it from doing so;
- d) ensure commercial confidentiality;
- e) maintain clear demarcation between actual periodic inspection and test body functions and unrelated functions;
- f) operate a documented quality system in accordance with 5.2.6.3;
- g) apply for approval in accordance with 5.2.6.4;
- h) ensure that the periodic inspections and tests are performed in accordance with 5.2.6.5; and
- i) maintain an effective and appropriate report and record system in accordance with 5.2.6.6.

### 5.2.6.3 *Quality system and audit of the periodic inspection and test body*

#### 5.2.6.3.1 *Quality system*

5.2.6.3.1.1 The quality system must contain all the elements, requirements and provisions adopted by the periodic inspection and test body. It must be documented in a systematic and orderly manner in the form of written policies, procedures and instructions.

5.2.6.3.1.2 The quality system must include:

- a) a description of the organizational structure and responsibilities;
- b) the relevant inspection and test, quality control, quality assurance and process operation instructions that will be used;
- c) quality records, such as inspection reports, test data, calibration data and certificates;
- d) management reviews to ensure the effective operation of the quality system arising from the audits performed in accordance with 5.2.6.3.2;
- e) a process for control of documents and their revision;
- f) a means for control of non-conforming cylinders and closed cryogenic receptacles; and training programmes and qualification procedures for relevant personnel.

#### 5.2.6.3.2 *Audit*

5.2.6.3.2.1 The periodic inspection and test body and its quality system must be audited in order to determine whether it meets the requirements of these Instructions to the satisfaction of the appropriate national authority.

5.2.6.3.2.2 An audit must be conducted as part of the initial approval process (see 5.2.6.4.3). An audit may be required as part of the process to modify an approval (see 5.2.6.4.6).

5.2.6.3.2.3 Periodic audits must be conducted, to the satisfaction of the appropriate national authority, to ensure that the periodic inspection and test body continues to meet the requirements of these Instructions.

5.2.6.3.2.4 The periodic inspection and test body must be notified of the results of any audit. The notification must contain the conclusions of the audit and any corrective actions required.

#### 5.2.6.3.3 *Maintenance of the quality system*

5.2.6.3.3.1 The periodic inspection and test body must maintain the quality system as approved in order that it remains adequate and efficient.

5.2.6.3.3.2 The periodic inspection and test body must notify the appropriate national authority that approved the quality system, of any intended changes, in accordance with the process for modification of an approval in 5.2.6.4.6.

### 5.2.6.4 *Approval process for periodic inspection and test bodies*

#### 5.2.6.4.1 *Initial approval*

5.2.6.4.1.1 A body desiring to perform periodic inspection and test of cylinders and closed cryogenic receptacles in accordance with a cylinder and closed cryogenic receptacle standard and these Instructions must apply for, obtain and retain an Approval Certificate issued by the appropriate national authority.

5.2.6.4.1.2 This written approval must, on request, be submitted to the appropriate national authority of a country of use.

5.2.6.4.2 An application must be made for each periodic inspection and test body and must include:

- a) the name and address of the periodic inspection and test body and, if the application is submitted by an authorized representative, its name and address;
- b) the address of each facility performing the periodic inspection and test;
- c) the name and title of the person(s) responsible for the quality system;
- d) the designation of the cylinders and closed cryogenic receptacles, the periodic inspection and test methods and the relevant cylinder and closed cryogenic receptacle standards encompassed by the quality system;
- e) documentation on each facility, the equipment and the quality system as specified under 5.2.6.3.1;
- f) the qualifications and training records of the periodic inspection and test personnel; and
- g) details of any refusal of approval of a similar application by any other appropriate national authority.

5.2.6.4.3 The appropriate national authority must:

- a) examine the documentation to verify that the procedures are in accordance with the requirements of the relevant cylinder and closed cryogenic receptacle standards and these Instructions; and
- b) conduct an audit in accordance with 5.2.6.3.2 to verify that the inspections and tests are carried out as required by the relevant cylinder and closed cryogenic receptacle standards and these Instructions, to the satisfaction of the appropriate national authority.

5.2.6.4.4 After the audit has been carried out with satisfactory results and all applicable requirements of 5.2.6.4 have been satisfied, an Approval Certificate must be issued. It must include the name of the periodic inspection and test body, the registered mark, the address of each facility and the necessary data for identification of its approved activities (e.g. designation of cylinders and closed cryogenic receptacles, periodic inspection and test method and cylinder and closed cryogenic receptacle standards).

5.2.6.4.5 If the periodic inspection and test body is denied approval, the appropriate national authority must provide written detailed reasons for such denial.

#### 5.2.6.4.6 *Modifications to periodic inspection and test body approvals*

5.2.6.4.6.1 Following approval, the periodic inspection and test body must notify the issuing appropriate national authority of any modifications to the information submitted under 5.2.6.4.2 relating to the initial approval.

5.2.6.4.6.2 The modifications must be evaluated in order to determine whether the requirements of the relevant cylinder and closed cryogenic receptacle standards and these Instructions will be satisfied.

5.2.6.4.6.3 An audit in accordance with 5.2.6.3.2 may be required.

5.2.6.4.6.4 The appropriate national authority must accept or reject these modifications in writing, and an amended Approval Certificate must be issued as necessary.

5.2.6.4.7 Upon request, the appropriate national authority must communicate to any other appropriate national authority, information concerning initial approvals, modifications of approvals and withdrawn approvals.

#### 5.2.6.5 *Periodic inspection and test and certification*

5.2.6.5.1 The application of the periodic inspection and test marking to a cylinder and closed cryogenic receptacle must be considered a declaration that the cylinder and closed cryogenic receptacle complies with the applicable cylinder and closed cryogenic receptacle standards and the requirements of these Instructions. The periodic inspection and test body must affix the periodic inspection and test marking, including its registered mark, to each approved cylinder and closed cryogenic receptacle (see 5.2.7.8).

5.2.6.5.2 A record certifying that a cylinder and closed cryogenic receptacle have passed the periodic inspection and test must be issued by the periodic inspection and test body before the cylinder and closed cryogenic receptacle are filled.

#### 5.2.6.6 *Records*

5.2.6.6.1 The periodic inspection and test body must retain records of the periodic inspection and test of cylinders and closed cryogenic receptacles (both passed and failed), including the location of the test facility, for not less than 15 years.

5.2.6.6.2 The owner of the cylinder and closed cryogenic receptacle must retain an identical record until the next periodic inspection and test unless the cylinder and closed cryogenic receptacle are permanently removed from service.

### 5.2.7 Marking of UN refillable cylinders and closed cryogenic receptacles

5.2.7.1 Refillable UN cylinders and closed cryogenic receptacles must be marked clearly and legibly with certification, operational and manufacturing marks. These marks must be permanently affixed (e.g. stamped, engraved or etched) on the cylinder. The marks must be on the shoulder, top end or neck of the cylinder and closed cryogenic receptacle or on a permanently affixed component of the cylinder and closed cryogenic receptacle (e.g. welded collar or corrosion-resistant plate welded to the outer jacket of a closed cryogenic receptacle). Except for the UN packaging symbol, the minimum size of the marks must be 5 mm for cylinders and closed cryogenic receptacles with a diameter greater than or equal to 140 mm and 2.5 mm for cylinders and closed cryogenic receptacles with a diameter less than 140 mm. The minimum size of the UN packaging symbol must be 10 mm for cylinders and closed cryogenic receptacles with a diameter greater than or equal to 140 mm and 5 mm for cylinders and closed cryogenic receptacles with a diameter less than 140 mm.

5.2.7.2 The following certification marks must be applied:

a) The UN packaging symbol 

≠ This symbol must not be used for any purpose other than certifying that a packaging complies with the relevant requirements in Chapters 1 to 6;

b) The technical standard (e.g. ISO 9809-1) used for the design, construction and testing;

c) The character(s) identifying the country of approval, as indicated by the distinguishing signs of motor vehicles in international traffic;

d) The identity mark or stamp of the inspection body that is registered with the appropriate national authority of the country authorizing the marking;

e) The date of the initial inspection, the year (four digits) followed by the month (two digits) separated by a slash (i.e. “/”).

5.2.7.3 The following operational marks must be applied:

f) The test pressure in bar, preceded by the letters “PH” and followed by the letters “BAR”;

g) The mass of the empty cylinder and closed cryogenic receptacle including all permanently attached integral parts (e.g. neck ring, foot ring, etc.) in kilograms, followed by the letters “KG”. This mass must not include the mass of valve, valve cap or valve guard, any coating, or porous mass for acetylene. The mass must be expressed to three significant figures rounded up to the last digit. For cylinders and closed cryogenic receptacles of less than 1 kg, the mass must be expressed to two significant figures rounded up to the last digit. In the case of cylinders for UN 1001 **Acetylene, dissolved** and UN 3374 **Acetylene, solvent free**, at least one decimal must be shown after the decimal point and two digits for cylinders of less than 1 kg;

h) The minimum guaranteed wall thickness of the cylinder in millimetres followed by the letters “MM”. This mark is not required for cylinders with a water capacity less than or equal to 1 litre or for composite cylinders or for closed cryogenic receptacles;

i) In the case of cylinders for compressed gases, UN 1001 **Acetylene, dissolved**, and UN 3374 **Acetylene, solvent free**, the working pressure in bar, preceded by the letters “PW”. In the case of closed cryogenic receptacles, the maximum allowable working pressure preceded by the letters “MAWP”;

j) In the case of cylinders for liquefied gases and closed cryogenic receptacles, the water capacity in litres expressed to three significant figures rounded down to the last digit, followed by the letter “L”. If the value of the minimum or nominal water capacity is an integer, the digits after the decimal point may be neglected;

k) In the case of cylinders for UN 1001 **Acetylene, dissolved**, the total of the mass of the empty receptacle, the fittings and accessories not removed during filling, any coating, the porous mass, the solvent and the saturation gas expressed to three significant figures rounded down to the last digit followed by the letters “KG”. At least one decimal must be shown after the decimal point. For cylinders of less than 1 kg, the mass must be expressed to two significant figures rounded down to the last digit;

l) In the case of cylinders for UN 3374 **Acetylene, solvent free**, the total of the mass of the empty receptacle, the fittings and accessories not removed during filling, any coating, and the porous mass expressed to three significant figures rounded down to the last digit followed by the letters “KG”. At least one decimal must be shown after the decimal point. For cylinders of less than 1 kg, the mass must be expressed to two significant figures rounded down to the last digit.

5.2.7.4 The following manufacturing marks must be applied:

m) Identification of the cylinder thread (e.g. 25E). (This mark is not required for closed cryogenic receptacles);

- n) The manufacturer's mark registered by the appropriate national authority. When the country of manufacture is not the same as the country of approval, then the manufacturer's mark must be preceded by the character(s) identifying the country of manufacture, as indicated by the distinguishing signs of motor vehicles in international traffic. The country mark and the manufacturer's mark must be separated by a space or slash;
- o) The serial number assigned by the manufacturer;
- p) In the case of steel cylinders and closed cryogenic receptacles and composite cylinders and closed cryogenic receptacles with steel liner intended for the transport of gases with a risk of hydrogen embrittlement, the letter "H" showing compatibility of the steel (see ISO 11114-1:1997).

5.2.7.5 The above marks must be placed in three groups:

- a) Manufacturing marks must be the top grouping and must appear consecutively in the sequence given in 5.2.7.4;
- b) The operational marks in 5.2.7.3 must be the middle grouping and the test pressure f) which must be immediately preceded by the working pressure (i) when the latter is required;
- c) Certification marks must be the bottom grouping and must appear in the sequence given in 5.2.7.2.

The following is an example of the markings applied to a cylinder:

m) 25E	n) D MF	o) 765432	p) H	
i) PW200PH	f) 300BAR	g) 62.1KG	j) 50L	h) 5.8MM
 a)	b) ISO 9809-1	c) F	d) IB	e) 2000/12

5.2.7.6 Other marks are allowed in areas other than the side wall, provided they are made in low stress areas and are not of a size and depth that will create harmful stress concentrations. In the case of closed cryogenic receptacles, such marks may be on a separate plate attached to the outer jacket. Such marks must not conflict with required marks.

5.2.7.7 Cylinders of composite construction with limited life must be marked with the letters "FINAL" followed by the expiry date, the year (four digits) and the month (two digits).

5.2.7.8 In addition to the preceding marks, each refillable cylinder and closed cryogenic receptacle that meets the periodic inspection and test requirements of 5.2.4 must be marked indicating:

- a) the character(s) identifying the country authorizing the body performing the periodic inspection and test. This marking is not required if this body is approved by the appropriate national authority of the country approving manufacture;
- b) the registered mark of the body authorized by the appropriate national authority for performing the periodic inspection and test;
- c) the date of the periodic inspection and test, the year (two digits) followed by the month (two digits) separated by a slash (i.e. "YY/MM"). Four digits may be used to indicate the year.

The above marks must appear consecutively in the sequence given.

5.2.7.9 For acetylene cylinders, with the agreement of the national authority, the date of the most recent periodic inspection and the stamp of the body performing the periodic inspection and test may be engraved on a ring held on the cylinder by the valve. The ring must be configured so that it can be removed only by disconnecting the valve from the cylinder.

## 5.2.8 Marking of non-refillable UN cylinders and closed cryogenic receptacles

5.2.8.1 Non-refillable UN cylinders and closed cryogenic receptacles must be marked clearly and legibly with certification and gas or cylinder and closed cryogenic receptacle specific marks. These marks must be permanently affixed (e.g. stencilled, stamped, engraved or etched) on the cylinder. Except when stencilled, the marks must be on the shoulder, top end or neck of the cylinder and closed cryogenic receptacle or on a permanently affixed component of the cylinder and closed cryogenic receptacle (e.g. welded collar). Except for the "UN" mark and the "DO NOT REFILL" mark, the minimum size of the marks must be 5 mm for cylinders and closed cryogenic receptacles with a diameter greater than or equal to 140 mm and 2.5 mm and closed cryogenic receptacles for cylinders with a diameter less than 140 mm. The minimum size of the "UN" mark must be

10 mm for cylinders and closed cryogenic receptacles with a diameter greater than or equal to 140 mm and 5 mm for cylinders and closed cryogenic receptacles with a diameter less than 140 mm. The minimum size of the "DO NOT REFILL" mark must be 5 mm.

5.2.8.2 The marks listed in 5.2.7.2 to 5.2.7.4 must be applied with the exception of g), h) and m). The serial number o) may be replaced by the batch number. In addition, the words "DO NOT REFILL" in letters of at least 5 mm in height are required.

5.2.8.3 The requirements of 5.2.7.5 must apply.

*Note.— Non-refillable cylinders and closed cryogenic receptacles may, on account of their size, substitute this marking by a label.*

5.2.8.4 Other marks are allowed provided they are made in low stress areas other than the side wall and are not of a size and depth that will create harmful stress concentrations. Such marks must not conflict with required marks.

### 5.3 REQUIREMENTS FOR NON-UN CYLINDERS AND NON-UN CLOSED CRYOGENIC RECEPTACLES

5.3.1 Cylinders and closed cryogenic receptacles not designed, constructed, inspected, tested and approved according to the requirements of 5.2 must be designed, constructed, inspected, tested and approved in accordance with the provisions of a technical code recognized by the appropriate national authority and the general requirements of 5.1.

5.3.2 Cylinders and closed cryogenic receptacles designed, constructed, inspected, tested and approved under the provisions of this section must not be marked with the UN packaging symbol.

5.3.3 For metallic cylinders, the construction must be such that the minimum burst ratio (burst pressure divided by test pressure) is:

- 1.50 for refillable cylinders,
- 2.00 for non-refillable cylinders.

5.3.4 Marking must be in accordance with the requirements of the appropriate national authority of the country of use.

#

### 5.4 REQUIREMENTS FOR AEROSOL DISPENSERS, SMALL RECEPTACLES CONTAINING GAS (GAS CARTRIDGES) AND FUEL CELL CARTRIDGES CONTAINING LIQUEFIED FLAMMABLE GAS

#

#### 5.4.1 Small receptacles containing gas (gas cartridges) and fuel cell cartridges containing liquefied flammable gas

#

5.4.1.1 Each receptacle or fuel cell cartridge must be subjected to a test performed in a hot water bath; the temperature of the bath and the duration of the test must be such that the internal pressure reaches that which would be reached at 55°C (50°C if the liquid phase does not exceed 95 per cent of the capacity of the receptacle or the fuel cell cartridge at 50°C). If the contents are sensitive to heat or if the receptacles or the fuel cell cartridges are made of plastics material which softens at this test temperature, the temperature of the bath must be set at between 20°C and 30°C but, in addition, one receptacle or fuel cell cartridge in 2 000 must be tested at the higher temperature.

#

5.4.1.2 No leakage or permanent deformation of a receptacle or fuel cell cartridge may occur, except that a plastic receptacle or fuel cell cartridge may be deformed through softening provided it does not leak.

#### 5.4.2 Aerosol dispensers

5.4.2.1 Each filled aerosol dispenser must be subjected to a test performed in a hot water bath or an approved water bath alternative.

##### 5.4.2.2 Hot water bath test

5.4.2.2.1 The temperature of the water bath and the duration of the test must be such that the internal pressure reaches that which would be reached at 55°C (50°C if the liquid phase does not exceed 95 percent of the capacity of the aerosol dispenser at 50°C). If the contents are sensitive to heat or if the aerosol dispensers are made of plastics material which softens at this test temperature, the temperature of the bath must be set at between 20°C and 30°C but, in addition, one aerosol dispenser in 2 000 must be tested at the higher temperature.

5.4.2.2.2 No leakage or permanent deformation of an aerosol dispenser may occur, except that a plastic aerosol dispenser may be deformed through softening provided that it does not leak.

#### 5.4.2.3 *Alternative methods*

5.4.2.3.1 With the approval of the appropriate national authority, alternative methods which provide an equivalent level of safety may be used provided that the requirements of 5.4.2.2.1, 5.4.2.2.2 and 5.4.2.2.3 are met.

#### 5.4.2.3.2 *Quality system*

5.4.2.3.2.1 Aerosol dispenser fillers and component manufacturers must have a quality system. The quality system must implement procedures to ensure that all aerosol dispensers that leak or that are deformed are rejected and not offered for transport.

5.4.2.3.2.2 The quality system must include:

- a) a description of the organizational structure and responsibilities;
- b) the relevant inspection and test, quality control, quality assurance, and process operation instructions that will be used;
- c) quality records, such as inspection reports, test data, calibration data and certificates;
- d) management reviews to ensure the effective operation of the quality system;
- e) a process for control of documents and their revision;
- f) a means for control of non-conforming aerosol dispensers;
- g) training programmes and qualification procedures for relevant personnel; and
- h) procedures to ensure that there is no damage to the final product.

5.4.2.3.2.3 An initial audit and periodic audits must be conducted to the satisfaction of the appropriate national authority. These audits must ensure the approved system is and remains adequate and efficient. Any proposed changes to the approved system must be notified to the appropriate national authority in advance.

#### 5.4.2.3.3 *Pressure and leak testing of aerosol dispensers before filling*

Every empty aerosol dispenser must be subjected to a pressure equal to or in excess of the maximum expected in the filled aerosol dispensers at 55°C (50°C if the liquid phase does not exceed 95 percent of the capacity of the receptacle at 50°C). This must be at least two-thirds of the design pressure of the aerosol dispenser. If any aerosol dispenser shows evidence of leakage at a rate equal to or greater than  $3.3 \times 10^{-2}$  mbar.l.s<sup>-1</sup> at the test pressure, distortion or other defect, it must be rejected.

#### 5.4.2.3.4 *Testing of the aerosol dispensers after filling*

5.4.2.3.4.1 Prior to filling, the filler must ensure that the crimping equipment is set appropriately and the specified propellant is used.

5.4.2.3.4.2 Each filled aerosol dispenser must be weighed and leak tested. The leak detection equipment must be sufficiently sensitive to detect at least a leak rate of  $2.0 \times 10^{-3}$  mbar.l.s<sup>-1</sup> at 20°C.

≠ 5.4.2.3.4.3 Any filled aerosol dispenser which shows evidence of leakage, deformation or excessive mass must be rejected.

5.4.3 With the approval of the appropriate national authority, aerosols and receptacles, small, containing pharmaceutical products and non flammable gases which are required to be sterile, but may be adversely affected by water bath testing, are not subject to 5.4.1 and 5.4.2 if:

- a) they are manufactured under the authority of a national health administration and, if required by the appropriate national authority, follow the principles of Good Manufacturing Practice (GMP) established by the World Health Organization (WHO); and

---

\* WHO Publication: Quality assurance of pharmaceuticals. A compendium of guidelines and related materials. Volume 2: Good manufacturing practices and inspection.

- b) an equivalent level of safety is achieved by the manufacturer's use of alternative methods for leak detection and pressure resistance, such as helium detection and water bathing a statistical sample of at least 1 in 2 000 from each production batch.
-

≠

## Chapter 6

### PACKAGINGS FOR INFECTIOUS SUBSTANCES OF CATEGORY A

#### 6.1 GENERAL

The requirements of this chapter apply to packagings intended for the transport of infectious substances of Category A.

#### 6.2 REQUIREMENTS FOR PACKAGINGS

6.2.1 The requirements for packagings in this section are based on packagings, as specified in Chapter 2, currently used. In order to take into account progress in science and technology, there is no objection to the use of packagings having specifications different from those in this chapter provided that they are equally effective, acceptable to the competent authority and able successfully to withstand the tests described in 6.5. Methods of testing other than those described in these Instructions are acceptable provided they are equivalent.

6.2.2 Packagings must be manufactured and tested under a quality assurance programme which satisfies the competent authority in order to ensure that each packaging meets the requirements of this chapter.

6.2.3 Manufacturers and subsequent distributors of packagings must provide information regarding procedures to be followed (including closure instructions for inner packagings and receptacles), a description of the types and dimensions of the closures (including required gaskets) and any other components needed to ensure that packages, as presented for transport, are capable of passing the applicable performance tests of this chapter.

#### 6.3 CODE FOR DESIGNATING TYPES OF PACKAGINGS

6.3.1 The codes for designating types of packagings are set out in 6;1.2.

6.3.2 The letters “U” or “W” may follow the packaging code. The letter “U” signifies a special packaging conforming to the requirements of 6.5.1.6. The letter “W” signifies that the packaging, although of the same type indicated by the code, is manufactured to a specification different from that in Chapter 3 and is considered equivalent under the requirements of 6.2.1.

#### 6.4 MARKING

*Note 1.— The marking indicates that the packaging which bears it corresponds to a successfully tested design type and that it complies with the provisions of this chapter which are related to the manufacture, but not to the use, of the packaging.*

*Note 2.— The marking is intended to be of assistance to packaging manufacturers, reconditioners, packaging users, operators and appropriate authorities.*

*Note 3.— The marking does not always provide full details of the test levels, etc., and these may need to be taken further into account, e.g. by reference to a test certificate, test reports or register of successfully tested packagings.*

6.4.1 Each packaging intended for use according to these Instructions must bear markings which are durable, legible and placed in a location and of such a size relative to the packaging as to be readily visible. For packages with a gross mass of more than 30 kg the markings, or a duplicate thereof, must appear on the top or on a side of the packaging. Letters, numerals and symbols must be at least 12 mm high, except for packagings of 30 L or 30 kg capacity or less, when they must be at least 6 mm in height and for packagings of 5 L or 5 kg or less, when they must be of an appropriate size.

6.4.2 A packaging that meets the requirements of this section and of 6.5 shall be marked with:

- a) the United Nations packaging symbol; 

This symbol must not be used for any purpose other than certifying that a packaging complies with the relevant requirements in Chapters 1 to 6;

- b) the code designating the type of packaging according to the requirements of 6;1.2;
- c) the text “CLASS 6.2”;

- d) the last two digits of the year of manufacture of the packaging;
- e) the State authorizing the allocation of the mark, indicated by the distinguishing sign for motor vehicles in international traffic;
- f) the name of the manufacturer or other identification of the packaging specified by the competent authority; and
- g) for packagings meeting the requirements of 6.5.1.6, the letter "U", inserted immediately following the marking required in b) above.

6.4.3 Markings must be applied in the sequence of the sub-paragraphs in 6.4.2; each element of the marking required in these sub-paragraphs must be clearly separated, e.g. by a slash or space, so as to be easily identified. For an example see 6.4.4. Any additional markings authorized by a competent authority must still enable the parts of the marking to be correctly identified with reference to 6.4.1.

6.4.4 Example of a marking:

	4G/CLASS 6.2/06	as in 6.4.2 a), b), c) and d)
	S/SP-9989-ERIKSSON	as in 6.4.2 e) and f)

## 6.5 TEST REQUIREMENTS FOR PACKAGINGS

### 6.5.1 Performance and frequency of tests

6.5.1.1 The design type of each packaging must be tested as provided for in this chapter in accordance with procedures established by the competent authority.

6.5.1.2 Each packaging design type must successfully pass the tests prescribed in this chapter before being used. A packaging design type is defined by the design, size, material and thickness, manner of construction and packing, but may include various surface treatments. It also includes packagings which differ from the design type only in their lesser design height.

6.5.1.3 Tests must be repeated on production samples at intervals established by the competent authority.

6.5.1.4 Tests must also be repeated after each modification which alters the design, material or manner of construction of a packaging.

6.5.1.5 The competent authority may permit the selective testing of packagings that differ only in minor respects from a tested type, e.g. smaller sizes or lower net mass of primary receptacles; and packagings such as drums and boxes which are produced with small reductions in external dimension(s).

6.5.1.6 Primary receptacles of any type may be assembled within a secondary packaging and transported without testing in the rigid outer packaging under the following conditions:

- a) The rigid outer packaging combination must have been successfully tested in accordance with 6.5.2.2 with fragile (e.g. glass) primary receptacles.
- b) The total combined gross mass of primary receptacles must not exceed one-half the gross mass of primary receptacles used for the drop test in a) above.
- c) The thickness of cushioning between primary receptacles and between primary receptacles and the outside of the secondary packaging must not be reduced below the corresponding thicknesses in the originally tested packaging; and if a single primary receptacle was used in the original test, the thickness of cushioning between primary receptacles must not be less than the thickness of cushioning between the outside of the secondary packaging and the primary receptacle in the original test. When either fewer or smaller primary receptacles are used (as compared to the primary receptacles used in the drop test), sufficient additional cushioning material must be used to take up the void spaces.
- d) The rigid outer packaging must have successfully passed the stacking test in 4.6 while empty. The total mass of identical packages must be based on the combined mass of packagings used in the drop test in a) above.
- e) For primary receptacles containing liquids, an adequate quantity of absorbent material to absorb the entire liquid content of the primary receptacles must be present.
- f) If the rigid outer packaging is intended to contain primary receptacles for liquids and is not leakproof, or is intended to contain primary receptacles for solids and is not siftproof, a means of containing any liquid or solid contents in the event of leakage must be provided in the form of a leakproof liner, plastic bag or other equally effective means of containment.
- g) In addition to the markings prescribed in 6.4.2 a) to f), packagings must be marked in accordance with 6.4.2 g).

6.5.1.7 The competent authority may at any time require proof, by tests in accordance with this chapter, that serially produced packagings meet the requirements of the design type tests.

6.5.1.8 Provided the validity of the test results is not affected, and with the approval of the competent authority, several tests may be made on one sample.

### 6.5.2 Preparation of packagings for testing

6.5.2.1 Samples of each packaging must be prepared as for transport except that the liquid or solid infectious substance must be replaced by water or, where conditioning at  $-18^{\circ}\text{C}$  is specified, by a water/antifreeze mixture. Each primary receptacle must be filled to not less than 98 per cent of its capacity.

*Note.*— The term water includes water/antifreeze solution with a minimum specific gravity of 0.95 for testing at  $-18^{\circ}\text{C}$ .

#### 6.5.2.2 Tests and number of samples required

**Table 6-4. Tests required for packaging types**

Type of packaging <sup>a</sup>	Primary receptacle		Tests required					
	Plastics	Other	Water spray 6.5.3.6.1	Cold conditioning 6.5.3.6.2	Drop 6.5.3	Additional drop 6.5.3.6.3	Puncture 6.5.4	Stacking 6;4.6
			No. of samples	No. of samples	No. of samples	No. of samples	No. of samples	No. of samples
Rigid outer packaging								
Fibreboard box	X		5	5	10		2	
		X	5	0	5		2	
Fibreboard drum	X		3	3	6		2	
		X	3	0	3		2	
Plastics box	X		0	5	5	Required on one sample when the packaging is intended to contain dry ice.	2	Required on three samples when testing a "U"-marked packaging, as defined in 6.5.1.6 for specific provisions.
		X	0	5	5		2	
Plastics drum/jerrican	X		0	3	3		2	
		X	0	3	3		2	
Boxes of other material	X		0	5	5		2	
		X	0	0	5		2	
Drums/jerricans of other material	X		0	3	3		2	
		X	0	0	3		2	

a. *Type of packaging* categorizes packagings for test purposes according to the kind of packaging and its material characteristics.

*Note 1.*— In instances where a primary receptacle is made of two or more materials, the material most liable to damage determines the appropriate test.

*Note 2.*— The material of the secondary packagings are not taken into consideration when selecting the test or conditioning for the test.

#### 6.5.2.2.1 Explanation for use of Table 6-4

6.5.2.2.1.1 If the packaging to be tested consists of a fibreboard outer box with a plastics primary receptacle, five samples must undergo the water spray test (see 6.5.3.6.1) prior to dropping and another five must be conditioned to  $-18^{\circ}\text{C}$  (see 6.5.3.6.2) prior to dropping. If the packaging is to contain dry ice, then one further single sample must be dropped five times after conditioning in accordance with 6.5.3.6.3.

6.5.2.2.1.2 Packagings prepared as for transport must be subjected to the tests in 6.5.3 and 6.5.4. For outer packagings, the headings in Table 6-4 relate to fibreboard or similar materials whose performance may be rapidly affected by moisture, plastics which may embrittle at low temperature, and other materials such as metal whose performance is not affected by moisture or temperature.

### 6.5.3 Drop test

6.5.3.1 Samples must be subjected to free-fall drops from a height of 9 metres onto a non-resilient, horizontal, flat, massive and rigid surface in conformity with 6.4.3.4.

6.5.3.2 Where the samples are in the shape of a box, five must be dropped, one in each of the following orientations:

- a) flat on the base;
- b) flat on the top;
- c) flat on the longest side;
- d) flat on the shortest side;
- e) on a corner.

6.5.3.3 Where the samples are in the shape of a drum, three must be dropped, one in each of the following orientations:

- a) diagonally on the top chime, with the centre of gravity directly above the point of impact;
- b) diagonally on the base chime;
- c) flat on the side.

6.5.3.4 While the sample must be released in the required orientation, it is accepted that for aerodynamic reasons the impact may not take place in that orientation.

6.5.3.5 Following the appropriate drop sequence, there must be no leakage from the primary receptacle(s), which must remain protected by cushioning/absorbent material in the secondary packaging.

#### 6.5.3.6 *Special preparation of test sample for the drop test*

##### 6.5.3.6.1 *Fibreboard — water spray test*

Fibreboard outer packagings: The sample must be subjected to a water spray that simulates exposure to rainfall of approximately 5 cm per hour for at least one hour. It must then be subjected to the test described in 6.5.3.1.

##### 6.5.3.6.2 *Plastics material — cold conditioning*

Plastics primary receptacles or outer packagings: The temperature of the test sample and its contents must be reduced to -18°C or lower for a period of at least 24 hours and within 15 minutes of removal from that atmosphere the test sample must be subjected to the test described in 6.5.3.1. Where the sample contains dry ice, the conditioning period may be reduced to four hours.

##### 6.5.3.6.3 *Packagings intended to contain dry ice — additional drop test*

Where the packaging is intended to contain dry ice, a test additional to that specified in 6.5.3.1 and, when appropriate, in 6.5.3.6.1 or 6.5.3.6.2 must be carried out. One sample must be stored so that all the dry ice dissipates and then that sample must be dropped in one of the orientations described in 6.5.3.2 which must be that most likely to result in failure of the packaging.

### 6.5.4 Puncture test

#### 6.5.4.1 *Packagings with a gross mass of 7 kg or less*

Samples must be placed on a level, hard surface. A cylindrical steel rod with a mass of at least 7 kg, a diameter of 38 mm and the impact end edges of a radius not exceeding 6 mm must be dropped in a vertical free fall from a height of one metre measured from the impact end to the impact surface of the sample. One sample must be placed on its base. A second sample must be placed in an orientation perpendicular to that used for the first sample. In each instance, the steel rod must be aimed to impact the primary receptacle. Following each impact, penetration of the secondary packaging is acceptable, provided that there is no leakage from the primary receptacle(s).

#### 6.5.4.2 *Packagings with a gross mass exceeding 7 kg*

Samples are dropped onto the end of a cylindrical steel rod. The rod must be set vertically on a level, hard surface. It must have a diameter of 38 mm with the upper end edges of a radius not exceeding 6 mm. The rod must protrude from the surface a distance at least equal to the distance between the centre of the primary receptacle(s) and the outer surface of the outer packaging, with a minimum protrusion of 200 mm. One sample is dropped with its top face lowermost in a vertical free fall from a height of 1 m, measured from the top of the steel rod. A second sample is dropped from the same height in an orientation perpendicular to that

used for the first sample. In each instance, the packaging must be so orientated that the steel rod would be capable of penetrating the primary receptacle(s). Following each impact, penetration of the secondary packaging is acceptable provided that there is no leakage from the primary receptacle(s).

### 6.5.5 Test report

6.5.5.1 A written test report containing at least the following particulars must be prepared and must be available to the users of the packaging:

- a) name and address of the test facility;
- b) name and address of the applicant (where appropriate);
- c) a unique test report identification;
- d) date of the test and of the report;
- e) manufacturer of the packaging;
- f) description of the packaging design type (e.g. dimensions, materials, closures, thickness, etc.), including method of manufacture (e.g. blow moulding) and which may include drawing(s) and/or photograph(s);
- g) maximum capacity;
- h) test contents;
- i) test descriptions and results;
- j) a signature and the name and status of the signatory.

6.5.5.2 The test report must contain statements that the packaging prepared for transport was tested in accordance with the appropriate requirements of this chapter and that the use of other packaging methods or components may render it invalid. A copy of the test report must be available to the appropriate national authority.

---

## Chapter 7

### REQUIREMENTS FOR THE CONSTRUCTION, TESTING AND APPROVAL OF PACKAGES AND MATERIAL OF CLASS 7

*Parts of this Chapter are affected by State Variations CA 1, CA 3, CA 4, DE 2, DK 1, JP 8, JP 26, US 10; see Table A-1*

#### 7.1 GENERAL REQUIREMENTS

7.1.1 The package must be so designed in relation to its mass, volume and shape that it can be easily and safely transported. In addition, the package shall be so designed that it can be properly secured in the aircraft during transport.

7.1.2 The design must be such that any lifting attachments on the package will not fail when used in the intended manner and that, if failure of the attachments should occur, the ability of the package to meet other requirements of these Instructions would not be impaired. The design must take account of appropriate safety factors to cover snatch lifting.

7.1.3 Attachments and any other features on the outer surface of the package which could be used to lift it must be designed either to support its mass in accordance with the requirements of 7.1.2 or must be removable or otherwise rendered incapable of being used during transport.

7.1.4 As far as practicable, the packaging must be designed and finished so that the external surfaces are free from protruding features and can be easily decontaminated.

7.1.5 As far as practicable, the outer layer of the package must be designed so as to prevent the collection and the retention of water.

7.1.6 Any features added to the package at the time of transport which are not part of the package must not reduce its safety.

7.1.7 The package must be capable of withstanding the effects of any acceleration, vibration or vibration resonance, which may arise under routine conditions of transport without any deterioration in the effectiveness of the closing devices on the various receptacles or in the integrity of the package as a whole. In particular, nuts, bolts and other securing devices must be designed so as to prevent them from becoming loose or being released unintentionally, even after repeated use.

7.1.8 The materials of the packaging and any components or structures must be physically and chemically compatible with each other and with the radioactive contents. Account must be taken of their behaviour under irradiation.

7.1.9 All valves through which the radioactive contents could otherwise escape must be protected against unauthorized operation.

7.1.10 The design of the package must take into account ambient temperatures and pressures that are likely to be encountered in routine conditions of transport.

7.1.11 For radioactive material having other dangerous properties, the package design must take into account those properties (see Part 2, Introductory Chapter, 3.1, 3.2 and 4:9.1.5).

#### 7.2 ADDITIONAL REQUIREMENTS FOR PACKAGES TRANSPORTED BY AIR

7.2.1 The temperature of the accessible surfaces must not exceed 50°C at an ambient temperature of 38°C with no account taken of insolation.

7.2.2 Packages must be designed so that, if they were exposed to ambient temperatures ranging from -40°C to +55°C, the integrity of the containment would not be impaired.

7.2.3 Packages containing radioactive material must be capable of withstanding, without leakage, an internal pressure that produces a pressure differential of not less than maximum normal operating pressure plus 95 kPa.

#### 7.3 REQUIREMENTS FOR EXCEPTED PACKAGES

An excepted package must be designed to meet the requirements specified in 7.1 and 7.2.

## 7.4 REQUIREMENTS FOR INDUSTRIAL PACKAGES

7.4.1 Industrial packages Types 1, 2 and 3 (Types IP-1, IP-2 and IP-3) must meet the requirements specified in 7.1, 7.2 and 7.6.2.

7.4.2 A Type IP-2 package must, if it were subjected to the tests specified in 7.14.4 and 7.14.5, prevent:

- a) loss or dispersal of the radioactive contents; and
- b) more than a 20 per cent increase in the maximum radiation level at any external surface of the package.

7.4.3 A Type IP-3 package must meet all the requirements specified in 7.6.2 to 7.6.15.

### 7.4.4 Alternative requirements for industrial packages Types 2 and 3 (Types IP-2 and IP-3)

7.4.4.1 Packages may be used as a Type IP-2 package, provided that:

- a) they satisfy the requirements of 7.4.1;
- ≠ b) they are designed to satisfy the requirements prescribed for Packing Group I or II in Part 6, Chapters 1 to 4, of these Instructions; and
- c) when subjected to the tests required for Packing Group I or II in Part 6, Chapter 4, they would prevent:
  - i) loss or dispersal of the radioactive contents; and
  - ii) more than a 20 per cent increase in the maximum radiation level at any external surface of the package.

≠ 7.4.4.2 Freight containers of a permanent enclosed character may also be used as Industrial package Types 2 or 3 (Types IP-2 or IP-3), provided that:

- a) the radioactive contents are restricted to solid materials;
- b) they satisfy the requirements of 7.4.1; and
- c) they are designed to conform to ISO 1496-1:1990: "Series 1 freight containers — Specification and testing — Part 1: General cargo containers" excluding dimensions and ratings. They must be designed so that, if subjected to the tests prescribed in that document and to the accelerations occurring during routine conditions of transport, they would prevent:
  - i) loss or dispersal of the radioactive contents; and
  - ii) more than a 20 per cent increase in the maximum radiation level at any external surface of the freight containers.

## 7.5 REQUIREMENTS FOR PACKAGES CONTAINING URANIUM HEXAFLUORIDE

7.5.1 Packages designed to contain uranium hexafluoride must meet the requirements prescribed elsewhere in these Instructions which pertain to the radioactive and fissile properties of the material. Except as allowed in 7.5.4, uranium hexafluoride in quantities of 0.1 kg or more must also be packaged and transported in accordance with the provisions of ISO 7195:1993: "Packaging of uranium hexafluoride (UF<sub>6</sub>) for transport", and the requirements of 7.5.2 and 7.5.3. The package must also meet the requirements prescribed elsewhere in these Instructions, which pertain to the radioactive and fissile properties of the material.

7.5.2 Each package designed to contain 0.1 kg or more of uranium hexafluoride must be designed so that it would meet the following requirements:

- a) withstand, without leakage and without unacceptable stress, as specified in ISO 7195:1993, the structural test as specified in 7.20;
- b) withstand, without loss or dispersal of the uranium hexafluoride, the free drop test specified in 7.14.4; and
- c) withstand, without rupture of the containment system, the thermal test specified in 7.16.3.

7.5.3 Packages designed to contain 0.1 kg or more of uranium hexafluoride must not be provided with pressure relief devices.

7.5.4 Subject to the approval of the competent authority, packages designed to contain 0.1 kg or more of uranium hexafluoride may be transported if:

- a) the packages are designed to international or national standards other than ISO 7195:1993 provided an equivalent level of safety is maintained;
- b) the packages are designed to withstand, without leakage and without unacceptable stress, a test pressure of less than 2.76 MPa, as specified in 7.20;
- c) for packages designed to contain 9 000 kg or more of uranium hexafluoride, the packages do not meet the requirement of 7.5.2 c).

In all other respects, the requirements specified in 7.5.1 to 7.5.3 must be satisfied.

## 7.6 REQUIREMENTS FOR TYPE A PACKAGES

7.6.1 Type A packages must be designed to meet the requirements of 7.1, 7.2 and 7.6.2 to 7.6.17.

7.6.2 The smallest overall external dimension of the package must not be less than 10 cm.

7.6.3 The outside of the package must incorporate a feature such as a seal, which is not readily breakable and which, while intact, will be evidence that it has not been opened.

7.6.4 Any tie-down attachments on the package must be designed so that, under normal and accident conditions of transport, the forces in those attachments must not impair the ability of the package to meet the requirements of these Instructions.

7.6.5 The design of the package must take into account temperatures ranging from  $-40^{\circ}\text{C}$  to  $+70^{\circ}\text{C}$  for the components of the packaging. Attention must be given to freezing temperatures for liquids and to the potential degradation of packaging materials within the given temperature range.

7.6.6 The design and manufacturing techniques must be in accordance with national or international standards, or other requirements, acceptable to the competent authority.

7.6.7 The design must include a containment system securely closed by a positive fastening device which cannot be opened unintentionally or by a pressure which may arise within the package.

7.6.8 Special form radioactive material may be considered as a component of the containment system.

7.6.9 If the containment system forms a separate unit of the package, it must be capable of being securely closed by a positive fastening device which is independent of any other part of the packaging.

7.6.10 The design of any component of the containment system must take into account, where applicable, the radiolytic decomposition of liquids and other vulnerable materials and the generation of gas by chemical reaction and radiolysis.

7.6.11 The containment system must retain its radioactive contents under a reduction of ambient pressure to 60 kPa.

7.6.12 All valves, other than pressure relief valves, must be provided with an enclosure to retain any leakage from the valve.

7.6.13 A radiation shield, which encloses a component of the package specified as a part of the containment system, must be designed so as to prevent the unintentional release of that component from the shield. Where the radiation shield and such component within it form a separate unit, the radiation shield must be capable of being securely closed by a positive fastening device, which is independent of any other packaging structure.

7.6.14 A package must be designed so that if it were subjected to the tests specified in 7.14, it would prevent:

- a) loss or dispersal of the radioactive contents; and
- b) more than a 20 per cent increase in the maximum radiation level at any external surface of the package.

7.6.15 The design of a package intended for liquid radioactive material must make provision for ullage to accommodate variations in the temperature of the contents, dynamic effects and filling dynamics.

### 7.6.16 Type A packages to contain liquids

A Type A package designed to contain liquid radioactive material must, in addition:

- a) be adequate to meet the conditions specified in 7.6.14 a) if the package is subjected to the tests specified in 7.15; and
- b) either:

- i) be provided with sufficient absorbent material to absorb twice the volume of the liquid contents. Such absorbent material must be suitably positioned so as to contact the liquid in the event of leakage; or
- ii) be provided with a containment system composed of primary inner and secondary outer containment components, designed to ensure retention of the liquid contents within the secondary outer containment components, even if the primary inner components leak.

#### 7.6.17 Type A packages to contain gas

A package designed for gases must prevent loss or dispersal of the radioactive contents if the package were subjected to the tests specified in 7.15. A Type A package designed for tritium gas or for noble gases must be excepted from this requirement.

### 7.7 REQUIREMENTS FOR TYPE B(U) PACKAGES

7.7.1 Type B(U) packages must be designed to meet the requirements specified in 7.1, 7.2 and 7.6.2 to 7.6.15, except 7.6.14 a), and, in addition, to the requirements specified in 7.7.2 to 7.7.15.

7.7.2 A package must be designed so that, under the ambient conditions specified in 7.7.5 and 7.7.6, heat generated within the package by the radioactive contents shall not, under normal conditions of transport, as demonstrated by the tests in 7.14, adversely affect the package in such a way that it would fail to meet the applicable requirements for containment and shielding if left unattended for a period of one week. Particular attention shall be paid to the effects of heat, which may:

- a) alter the arrangement, the geometrical form or the physical state of the radioactive contents or, if the radioactive material is enclosed in a can or receptacle (for example, clad fuel elements), cause the can, receptacle or radioactive material to deform or melt; or
- b) lessen the efficiency of the packaging through differential thermal expansion or cracking or melting of the radiation shielding material; or
- c) in combination with moisture, accelerate corrosion.

7.7.3 A package must be so designed that, under the ambient condition specified in 7.7.5 and in the absence of isolation, the temperature of the accessible surfaces of a package must not exceed 50°C, unless the package is transported under exclusive use.

7.7.4 In order to meet the requirements of 7.2.1, account may be taken of barriers or screens intended to give protection to persons without the need for the barriers or screens being subject to any test.

7.7.5 The ambient temperature must be assumed to be 38°C.

7.7.6 The solar insolation conditions must be assumed to be as specified in Table 6-5.

7.7.7 A package which includes thermal protection for the purpose of satisfying the requirements of the thermal test specified in 7.16.3 must be so designed that such protection will remain effective if the package is subjected to the tests specified in 7.14 and 7.16.2 a) and b) or 7.16.2 b) and c), as appropriate. Any such protection on the exterior of the package must not be rendered ineffective by ripping, cutting, skidding, abrasion or rough handling.

7.7.8 A package must be so designed that, if it were subjected to:

- a) the tests specified in 7.14, it would restrict the loss of radioactive contents to not more than  $10^{-6}$  A<sub>2</sub> per hour; and
- b) the tests specified in 7.16.1, 7.16.2 b), 7.16.3 and 7.16.4 and the tests in:
  - i) 7.16.2 c), when the package has a mass not greater than 500 kg, an overall density not greater than 1 000 kg/m<sup>3</sup> based on the external dimensions, and radioactive contents greater than 1 000 A<sub>2</sub> not as special form radioactive material; or
  - ii) 7.16.2 a), for all other packages,

it would meet the following requirements:

- retain sufficient shielding to ensure that the radiation level at 1 m from the surface of the package would not exceed 10 mSv/h with the maximum radioactive contents which the package is designed to contain; and
- restrict the accumulated loss of radioactive contents in a period of one week to not more than 10 A<sub>2</sub> for krypton-85 and not more than A<sub>2</sub> for all other radionuclides.

Where mixtures of different radionuclides are present, the provisions of 2;7.2.2.4 to 2;7.2.2.6 must apply except that for krypton-85, an effective A<sub>2</sub>(i) value equal to 10 A<sub>2</sub> may be used. For case a) above, the assessment must take into account the external contamination limits of 4;9.1.2.

Table 6-5. Insolation data

Case	Form and location of surface	Insolation for 12 hours per day ( $W/m^2$ )
1	Flat surfaces transported horizontally — downward facing	0
2	Flat surfaces transported horizontally — upward facing	800
3	Surfaces transported vertically	200*
4	Other downward facing (not horizontal) surfaces	200*
5	All other surfaces	400*

\* Alternatively, a sine function may be used, with an absorption coefficient adopted and the effects of possible reflection from neighbouring objects neglected.

7.7.9 A package for radioactive contents with activity greater than  $10^5 A_2$  must be designed so that if it were subjected to the enhanced water immersion test specified in 7.17, there would be no rupture of the containment system.

7.7.10 Compliance with the permitted activity release limits must depend neither upon filters nor upon a mechanical cooling system.

7.7.11 A package must not include a pressure relief system from the containment system, which would allow the release of radioactive material to the environment under the conditions of the tests specified in 7.14 and 7.16.

7.7.12 A package must be designed so that if it were at the maximum normal operating pressure and it were subjected to the tests specified in 7.14 and 7.16, the level of strains in the containment system would not attain values which would adversely affect the package in such a way that it would fail to meet the applicable requirements.

7.7.13 A package must not have a maximum normal operating pressure in excess of a gauge pressure of 700 kPa.

7.7.14 A package containing low dispersible radioactive material must be so designed so that any features added to the low dispersible radioactive material that are not part of it, or any internal components of the packaging must not adversely affect the performance of the low dispersible radioactive material.

7.7.15 A package must be designed for an ambient temperature range from  $-40^\circ\text{C}$  to  $+38^\circ\text{C}$ .

## 7.8 REQUIREMENTS FOR TYPE B(M) PACKAGES

Type B(M) packages must meet the requirements for Type B(U) packages specified in 7.7.1, except that for packages to be transported solely within a specified country or solely between specified countries, conditions other than those given in 7.6.5, 7.7.5, 7.7.6 and 7.7.9 to 7.7.15 may be assumed with the approval of the competent authorities of these countries. Notwithstanding, the requirements for Type B(U) packages specified in 7.7.9 to 7.7.15 must be met as far as practicable.

## 7.9 REQUIREMENTS FOR TYPE C PACKAGES

7.9.1 Type C packages must be designed to meet the requirements specified in 7.1, 7.2 and 7.6.2 to 7.6.15, except as specified in 7.6.14 a), and the requirements specified in 7.7.2 to 7.7.6, 7.7.10 to 7.7.15 and 7.9.2 to 7.9.4.

7.9.2 A package must be capable of meeting the assessment criteria prescribed for tests in 7.7.8 b) and 7.7.12 after burial in an environment defined by a thermal conductivity of  $0.33 \text{ W/(m.K)}$  and a temperature of  $38^\circ\text{C}$  in the steady state. Initial conditions for the assessment must assume that any thermal insulation of the package remains intact, the package is at the maximum normal operating pressure and the ambient temperature is  $38^\circ\text{C}$ .

7.9.3 A package must be designed so that, if it were at the maximum normal operating pressure and subjected to:

a) the tests specified in 7.14, it would restrict the loss of radioactive contents to not more than  $10^{-6} A_2$  per hour; and

b) the test sequences in 7.19.1, it would meet the following requirements:

i) retain sufficient shielding to ensure that the radiation level at 1 m from the surface of the package would not exceed  $10 \text{ mSv/h}$  with the maximum radioactive contents which the package is designed to contain; and

- ii) restrict the accumulated loss of radioactive contents in a period of one week to not more than  $10 A_2$  for krypton-85 and not more than  $A_2$  for all other radionuclides.

Where mixtures of different radionuclides are present, the provisions of 2;7.2.2.4 to 2;7.2.2.6 must apply, except that for krypton-85 an effective  $A_2(i)$  value equal to  $10 A_2$  may be used. For case a) above, the assessment must take into account the external contamination limits of 4;9.1.2.

7.9.4 A package must be so designed that there will be no rupture of the containment system following performance of the enhanced water immersion test specified in 7.17.

## 7.10 REQUIREMENTS FOR PACKAGES CONTAINING FISSILE MATERIAL

7.10.1 Fissile material must be transported so as to:

- a) maintain subcriticality during normal and accident conditions of transport; in particular, the following contingencies must be considered:
  - i) water leaking into or out of packages;
  - ii) the loss of efficiency of built-in neutron absorbers or moderators;
  - iii) rearrangement of the contents either within the package or as a result of loss from the package;
  - iv) reduction of spaces within or between packages;
  - v) packages becoming immersed in water or buried in snow; and
  - vi) temperature changes; and
- b) meet the requirements:
  - i) of 7.6.2 for packages containing fissile material;
  - ii) prescribed elsewhere in these Instructions and which pertain to the radioactive properties of the material; and
  - iii) specified in 7.10.3 to 7.10.12, unless excepted by 7.10.2.

≠ 7.10.2 Fissile material meeting one of the provisions in a) to d) of 2;7.2.3.5 is excepted from the requirement to be transported in packages that comply with 7.10.3 to 7.10.12, as well as the other requirements of these Instructions that apply to fissile material. Only one type of exception is allowed per consignment.

7.10.3 Where the chemical or physical form, isotopic composition, mass or concentration, moderation ratio or density, or geometric configuration is not known, the assessments of 7.10.7 to 7.10.12 must be performed assuming that each parameter that is not known has the value which gives the maximum neutron multiplication consistent with the known conditions and parameters in these assessments.

7.10.4 For irradiated nuclear fuel the assessments of 7.10.7 to 7.10.12 must be based on an isotopic composition demonstrated to provide:

- a) the maximum neutron multiplication during the irradiation history; or
- b) a conservative estimate of the neutron multiplication for the package assessments. After irradiation but prior to shipment, a measurement must be performed to confirm the conservatism of the isotopic composition.

7.10.5 The package, after being subjected to the tests specified in 7.14, must prevent the entry of a 10-cm cube.

7.10.6 The package must be designed for an ambient temperature range of  $-40^{\circ}\text{C}$  to  $+38^{\circ}\text{C}$  unless the competent authority specifies otherwise in the certificate of approval for the package design.

7.10.7 For a package in isolation, it must be assumed that water can leak into or out of all void spaces of the package, including those within the containment system. However, if the design incorporates special features to prevent such leakage of water into or out of certain void spaces, even as a result of error, absence of leakage may be assumed in respect of those void spaces. Special features must include the following:

- a) multiple high standard water barriers, each of which would remain watertight if the package were subject to the tests prescribed in 7.10.12 b), a high degree of quality control in the manufacture, maintenance and repair of packagings and tests to demonstrate the closure of each package before each shipment; or
- b) for packages containing uranium hexafluoride only, with maximum enrichment of 5 mass per cent uranium-235:

- i) packages where, following the tests prescribed in 7.10.12 b), there is no physical contact between the valve and any other component of the packaging other than at its original point of attachment and where, in addition, following the test prescribed in 7.16.3, the valves remain leaktight; and
- ii) a high degree of quality control in the manufacture, maintenance and repair of packagings coupled with tests to demonstrate closure of each package before each shipment.

7.10.8 It must be assumed that the confinement system must be closely reflected by at least 20 cm of water or such greater reflection as may additionally be provided by the surrounding material of the packaging. However, when it can be demonstrated that the confinement system remains within the packaging following the tests prescribed in 7.10.12 b), close reflection of the package by at least 20 cm of water may be assumed in 7.10.9 c).

7.10.9 The package must be subcritical under the conditions of 7.10.7 and 7.10.8, with the package conditions that result in the maximum neutron multiplication consistent with:

- a) routine conditions of transport (incident free);
- b) the tests specified in 7.10.11 b);
- c) the tests specified in 7.10.12 b).

7.10.10:

- a) The package must be subcritical under conditions consistent with the Type C package tests specified in 7.19.1 assuming reflection by at least 20 cm of water but no water-in leakage.
- b) In the assessment of 7.10.9, allowance must not be made for special features of 7.10.7 unless, following the Type C package tests specified in 7.19.1 and, subsequently, the water-in leakage test of 7.18.3, leakage of water into or out of the void spaces is prevented.

7.10.11 A number "N" must be derived, such that five times "N" must be subcritical for the arrangement and package conditions that provide the maximum neutron multiplication consistent with the following:

- a) There must not be anything between the packages, and the package arrangement must be reflected on all sides by at least 20 cm of water; and
- b) The state of the packages must be their assessed or demonstrated condition if they had been subjected to the tests specified in 7.14.

7.10.12 A number "N" must be derived, such that two times "N" must be subcritical for the arrangement and package conditions that provide the maximum neutron multiplication consistent with the following:

- a) hydrogenous moderation between packages, and the package arrangement reflected on all sides by at least 20 cm of water; and
- b) the tests specified in 7.14 followed by whichever of the following is the more limiting:
  - i) the tests specified in 7.16.2 b) and, either 7.16.2 c) for packages having a mass not greater than 500 kg and an overall density not greater than 1 000 kg/m<sup>3</sup> based on the external dimensions, or 7.16.2 a) for all other packages; followed by the test specified in 7.16.3 and completed by the tests specified in 7.18.1 to 7.18.3; or
  - ii) the test specified in 7.16.4; and
- c) where any part of the fissile material escapes from the containment system following the tests specified in 7.10.12 b), it must be assumed that fissile material escapes from each package in the array and all of the fissile material must be arranged in the configuration and moderation that results in the maximum neutron multiplication with close reflection by at least 20 cm of water.

7.10.13 The criticality safety index (CSI) for packages containing fissile material must be obtained by dividing the number 50 by the smaller of the two values of N derived in 7.10.11 and 7.11.12 (i.e.  $CSI = 50/N$ ). The value of the CSI may be zero, provided that an unlimited number of packages is subcritical (i.e. N is effectively equal to infinity in both cases).

≠

## 7.11 TEST PROCEDURES AND DEMONSTRATION OF COMPLIANCE

7.11.1 Demonstration of compliance with the performance standards required in 2;7.2.3.1.3, 2;7.2.3.1.4, 2;7.2.3.3.1, 2;7.2.3.3.2, 2;7.2.3.4.1, 2;7.2.3.4.2 and 6;7.1 to 6;7.10 must be accomplished by any of the methods listed below or by a combination thereof:

- a) Performance of tests with specimens representing LSA-III material, or special form radioactive material, or low dispersible radioactive material or with prototypes or samples of the packaging, where the contents of the specimen or the packaging

for the tests must simulate, as closely as practicable, the expected range of radioactive contents and the specimen or packaging to be tested must be prepared as presented for transport;

- b) Reference to previous satisfactory demonstrations of a sufficiently similar nature;
- c) Performance of tests with models of appropriate scale incorporating those features which are significant with respect to the item under investigation when engineering experience has shown results of such tests to be suitable for design purposes. When a scale model is used, the need for adjusting certain test parameters, such as penetrator diameter or compressive load, must be taken into account;
- d) Calculation, or reasoned argument, when the calculation procedures and parameters are generally agreed to be reliable or conservative.

7.11.2 After the specimen, prototype or sample has been subjected to the tests, appropriate methods of assessment must be used to assure that the requirements for the test procedures have been fulfilled in compliance with the performance and acceptance standards prescribed in 2;7.2.3.1.3, 2;7.2.3.1.4, 2;7.2.3.3.1, 2;7.2.3.3.2, 2;7.2.3.4.1, 2;7.2.3.4.2 and 6;7.1 to 6;7.10.

7.11.3 All specimens must be inspected before testing in order to identify and record faults or damage including the following:

- a) divergence from the design;
- b) defects in manufacture;
- c) corrosion or other deterioration; and
- d) distortion of features.

The containment system of the package must be clearly specified. The external features of the specimen must be clearly identified so that reference may be made simply and clearly to any part of such a specimen.

#### **7.12 TESTING THE INTEGRITY OF THE CONTAINMENT SYSTEM AND SHIELDING AND EVALUATING CRITICALITY SAFETY**

After each of the applicable tests specified in 7.14 to 7.20:

- a) faults and damages must be identified and recorded;
- b) it must be determined whether the integrity of the containment system and shielding has been retained to the extent required in 7.1 to 7.10 for the package under test; and
- c) it must be determined, for packages containing fissile material, whether the assumptions and conditions used in the assessments required by 7.10.1 to 7.10.12 for one or more packages are valid.

#### **7.13 TARGET FOR DROP TESTS**

The target for the drop tests specified in 2;7.2.3.3.5 a), 7.14.4, 7.15 a), 7.16.2 and 7.19.2 must be a flat, horizontal surface of such a character that any increase in its resistance to displacement or deformation upon impact by the specimen would not significantly increase the damage to the specimen.

#### **7.14 TESTS FOR DEMONSTRATING ABILITY TO WITHSTAND NORMAL CONDITIONS OF TRANSPORT**

7.14.1 The tests are: the water spray test, the free drop test, the stacking test and the penetration test. Specimens of the package must be subjected to the free drop test, the stacking test and the penetration test, preceded in each case by the water spray test. One specimen may be used for all the tests, provided that the requirements of 7.14.2 are fulfilled.

7.14.2 The time interval between the conclusion of the water spray test and the succeeding test must be such that the water has soaked in to the maximum extent, without appreciable drying of the exterior of the specimen. In the absence of any evidence to the contrary, this interval must be taken to be two hours if the water spray is applied from four directions simultaneously. No time interval must elapse, however, if the water spray is applied from each of the four directions consecutively.

7.14.3 Water spray test: the specimen must be subjected to a water spray test that simulates exposure to rainfall of approximately 5 cm per hour for at least one hour.

7.14.4 Free drop test: the specimen must drop onto the target so as to suffer maximum damage in respect of the safety features to be tested.

- a) The height of the drop measured from the lowest point of the specimen to the upper surface of the target must be not less than the distance specified in Table 6-6 for the applicable mass. The target must be as defined in 7.13;
- b) For rectangular fibreboard or wood packages not exceeding a mass of 50 kg, a separate specimen must be subjected to a free drop onto each corner from a height of 0.3 m;
- c) For cylindrical fibreboard packages not exceeding a mass of 100 kg, a separate specimen must be subjected to a free drop onto each of the quarters of each rim from a height of 0.3 m.

7.14.5 Stacking test: unless the shape of the packaging effectively prevents stacking, the specimen must be subjected, for a period of 24 hours, to a compressive load equal to the greater of the following:

- a) the equivalent of 5 times the mass of the actual package; and
- b) the equivalent of 13 kPa multiplied by the vertically projected area of the package.

The load must be applied uniformly to two opposite sides of the specimen, one of which must be the base on which the package would typically rest.

7.14.6 Penetration test: the specimen must be placed on a rigid, flat, horizontal surface which will not move significantly while the test is being carried out.

**Table 6-6. Free drop distance for testing packages to normal conditions of transport**

<i>Package mass (kg)</i>	<i>Free drop distance (m)</i>
Package mass < 5 000	1.2
5 000 ≤ Package mass < 10 000	0.9
10 000 ≤ Package mass < 15 000	0.6
15 000 ≤ Package mass	0.3

- a) A bar of 3.2 cm in diameter with a hemispherical end and a mass of 6 kg must be dropped and directed to fall, with its longitudinal axis vertical, onto the centre of the weakest part of the specimen so that, if it penetrates sufficiently far, it will hit the containment system. The bar must not be significantly deformed by the test performance;
- b) The height of the drop of the bar measured from its lower end to the intended point of impact on the upper surface of the specimen must be 1 m.

#### **7.15 ADDITIONAL TESTS FOR TYPE A PACKAGES DESIGNED FOR LIQUIDS AND GASES**

A specimen or separate specimens must be subjected to each of the following tests, unless it can be demonstrated that one test is more severe for the specimen in question than the other, in which case one specimen must be subjected to the more severe test.

- a) Free drop test: the specimen must drop onto the target so as to suffer the maximum damage in respect of containment. The height of the drop measured from the lowest part of the specimen to the upper surface of the target must be 9 m. The target must be as defined in 7.13;
- b) Penetration test: the specimen must be subjected to the test specified in 7.14.6 except that the height of the drop must be increased to 1.7 m from the 1 m specified in 7.14.6 b).

#### **7.16 TESTS FOR DEMONSTRATING THE ABILITY TO WITHSTAND ACCIDENT CONDITIONS IN TRANSPORT**

7.16.1 The specimen must be subjected to the cumulative effects of the tests specified in 7.16.2 and 7.16.3, in that order. Following these tests, either this specimen or a separate specimen must be subjected to the effect(s) of the water immersion test(s) as specified in 7.16.4 and, if applicable, 7.17.

7.16.2 Mechanical test: the mechanical test consists of three different drop tests. Each specimen must be subjected to the applicable drops as specified in 7.7.8 or 7.10.12. The order in which the specimen is subjected to the drops must be such that, on completion of the mechanical test, the specimen must have suffered such damage as will lead to the maximum damage in the thermal test which follows:

- a) For drop I, the specimen must drop onto the target so as to suffer the maximum damage, and the height of the drop measured from the lowest point of the specimen to the upper surface of the target must be 9 m. The target must be as defined in 7.13;
- b) For drop II, the specimen must drop, so as to suffer the maximum damage, onto a bar rigidly mounted perpendicularly on the target. The height of the drop measured from the intended point of impact of the specimen to the upper surface of the bar must be 1 m. The bar must be of solid mild steel of circular section,  $(15.0 \pm 0.5 \text{ cm})$  in diameter and 20 cm long unless a longer bar would cause greater damage, in which case a bar of sufficient length to cause maximum damage must be used. The upper end of the bar shall be flat and horizontal with its edge rounded off to a radius of not more than 6 mm. The target on which the bar is mounted shall be as described in 7.13;
- c) For drop III, the specimen must be subjected to a dynamic crush test by positioning the specimen on the target so as to suffer maximum damage by the drop of a 500 kg mass from 9 m onto the specimen. The mass must consist of a solid mild steel plate 1 m by 1 m and must fall in a horizontal attitude. The height of the drop must be measured from the underside of the plate to the highest point of the specimen. The target on which the specimen rests must be as defined in 7.13.

7.16.3 Thermal test: the specimen must be in thermal equilibrium under conditions of an ambient temperature of 38°C, subject to the solar insolation conditions specified in Table 6-5 and subject to the design maximum rate of internal heat generation within the package from the radioactive contents. Alternatively, any of these parameters are allowed to have different values prior to and during the test, provided due account is taken of them in the subsequent assessment of package response. The thermal test must then consist of:

- a) exposure of a specimen for a period of 30 minutes to a thermal environment which provides a heat flux at least equivalent to that of a hydrocarbon fuel/air fire in sufficiently quiescent ambient conditions to give a minimum average flame emissivity coefficient of 0.9 and an average temperature of at least 800°C, fully engulfing the specimen, with a surface absorptivity coefficient of 0.8 or that value which the package may be demonstrated to possess if exposed to the fire specified, followed by;
- b) exposure of the specimen to an ambient temperature of 38°C, subject to the solar insolation conditions specified in Table 6-5 and subject to the design maximum rate of internal heat generation within the package by the radioactive contents for a sufficient period to ensure that temperatures in the specimen are everywhere decreasing and/or are approaching initial steady-state conditions. Alternatively, any of these parameters are allowed to have different values following cessation of heating, provided due account is taken of them in the subsequent assessment of package response.

During and following the test, the specimen must not be artificially cooled and any combustion of materials of the specimen must be permitted to proceed naturally.

7.16.4 Water immersion test: the specimen must be immersed under a head of water of at least 15 m for a period of not less than eight hours in the attitude which will lead to maximum damage. For demonstration purposes, an external gauge pressure of at least 150 kPa must be considered to meet these conditions.

#### **7.17 ENHANCED WATER IMMERSION TEST FOR TYPE B(U) AND TYPE B(M) PACKAGES CONTAINING MORE THAN $10^5 \text{ A}_2$ , AND TYPE C PACKAGES**

Enhanced water immersion test: the specimen must be immersed under a head of water of at least 200 m for a period of not less than one hour. For demonstration purposes, an external gauge pressure of at least 2 MPa must be considered to meet these conditions.

#### **7.18 WATER LEAKAGE TEST FOR PACKAGES CONTAINING FISSILE MATERIAL**

7.18.1 Packages for which water-in leakage or out-leakage to the extent which results in the greatest reactivity has been assumed, for purposes of assessment under 7.10.7 to 7.10.12, must be excepted from the test.

7.18.2 Before the specimen is subjected to the water leakage test specified below, it must be subjected to the tests in 7.16.2 b) and either 7.16.2 a) or c) as required by 7.10.12 and the test specified in 7.16.3.

7.18.3 The specimen must be immersed under a head of water of at least 0.9 m for a period of not less than eight hours and in the attitude for which maximum leakage is expected.

#### **7.19 TESTS FOR TYPE C PACKAGES**

7.19.1 Specimens must be subjected to the effects of each of the following test sequences in the orders specified:

- a) the tests specified in 7.16.2 a), 7.16.2 c), 7.19.2 and 7.19.3; and

- b) the test specified in 7.19.4.

Separate specimens are allowed to be used for each of the sequences in a) and b).

7.19.2 Puncture/tearing test: the specimen must be subjected to the damaging effects of a solid probe made of mild steel. The orientation of the probe to the surface of the specimen must be positioned so as to cause maximum damage at the conclusion of the test sequence specified in 7.19.1 a).

- a) The specimen, representing a package having a mass less than 250 kg, must be placed on a target and subjected to a probe having a mass of 250 kg and falling from a height of 3 m above the intended impact point. For this test, the probe must be a 20 cm in diameter cylindrical bar with the striking end forming a frustum of a right circular cone with the following dimensions: 30 cm in height and 2.5 cm in diameter at the top with its edge rounded off to a radius of not more than 6 mm. The target on which the specimen is placed must be as specified in 7.13;
- b) For packages having a mass of 250 kg or more, the base of the probe must be placed on a target and the specimen dropped onto the probe. The height of the drop, measured from the point of impact with the specimen to the upper surface of the probe must be 3 m. For this test, the probe must have the same properties and dimensions as specified in a) above, except that the length and mass of the probe must be such as to incur maximum damage to the specimen. The target on which the base of the probe is placed must be as specified in 7.13.

7.19.3 Enhanced thermal test: the conditions for this test must be as specified in 7.16.3, except that the exposure to the thermal environment must be for a period of 60 minutes.

7.19.4 Impact test: the specimen must be subject to an impact on a target at a velocity of not less than 90 m/s, at such an orientation as to suffer maximum damage. The target must be as defined in 7.13, except that the target surface may be at any orientation as long as the surface is normal to the specimen path.

## 7.20 TESTS FOR PACKAGINGS DESIGNED TO CONTAIN URANIUM HEXAFLUORIDE

Specimens that comprise or simulate packagings designed to contain 0.1 kg or more of uranium hexafluoride must be tested hydraulically at an internal pressure of at least 1.38 MPa but, when the test pressure is less than 2.76 MPa, the design must require multilateral approval. For re-testing packagings, any other equivalent non-destructive testing may be applied subject to multilateral approval.

## 7.21 APPROVALS OF PACKAGE DESIGNS AND MATERIALS

7.21.1 The approval of designs for packages containing 0.1 kg or more of uranium hexafluoride requires that:

- a) each design that meets the requirements of 7.5.4 requires multilateral approval;
- b) each design that meets the requirements of 7.5.1 to 7.5.3 must require unilateral approval by the competent authority of the State of Origin of the design, unless multilateral approval is otherwise required by these Instructions.

7.21.2 Each Type B(U) and Type C package design requires unilateral approval, except that:

- a) a package design for fissile material, which is also subject to 5;1.2.2.1 and 7.21.4 must require multilateral approval; and
- b) a Type B(U) package design for low dispersible radioactive material must require multilateral approval.

7.21.3 Each Type B(M) package design, including those for fissile material which are also subject to 5;1.2.2.1 and 7.21.4 and those for low dispersible radioactive material, must require multilateral approval.

7.21.4 Each package design for fissile material that is not excepted, according to 7.10.2, from the requirements which apply specifically to packages containing fissile material must require multilateral approval.

7.21.5 The design for special form radioactive material must require unilateral approval. The design for low dispersible radioactive material must require multilateral approval (see also 6.4.23.8 of the UN Recommendations).

## 7.22 REGISTRATION OF SERIAL NUMBERS AND VALIDATION

7.22.1 The competent authority must be informed of the serial number of each packaging manufactured to a design approved by them. The competent authority must maintain a register of such numbers.

7.22.2 Multilateral approval may be by validation of the original certificate issued by the competent authority of the State of Origin of the design or shipment.

## 7.23 TRANSITIONAL MEASURES FOR CLASS 7

### 7.23.1 Packages not requiring competent authority approval of design under the 1985 and 1985 (As Amended 1990) editions of IAEA Safety Series No. 6

7.23.1.1 Excepted packages, Industrial packages Type IP-1, Type IP-2 and Type IP-3 and Type A packages that did not require approval of design by the competent authority and which meet the requirements of the 1985 or 1985 (As Amended 1990) editions of the IAEA *Regulations for the Safe Transport of Radioactive Material* (IAEA Safety Series No. 6) may continue to be used subject to the mandatory programme of quality assurance in accordance with the requirements of 1;6.3 and the activity limits and material restrictions of 2;7.2.4.

7.23.1.2 Any packaging modified, unless to improve safety, or manufactured after 31 December 2003, must meet the requirements of these Instructions in full. Packages prepared for transport not later than 31 December 2003 under the 1985 or 1985 (As Amended 1990) editions of IAEA Safety Series No. 6 may continue in transport. Packages prepared for transport after this date must meet the requirements of these Instructions in full.

### 7.23.2 Packages approved under the 1973, 1973 (As Amended), 1985 and 1985 (As Amended 1990) editions of IAEA Safety Series No. 6

7.23.2.1 Packagings manufactured to a package design approved by the competent authority under the provisions of the 1973 or 1973 (As Amended) editions of IAEA Safety Series No. 6 may continue to be used subject to: multilateral approval of package design; the mandatory programme of quality assurance in accordance with the applicable requirements of 1;6.3; the activity limits and material restrictions of 2;7.2.4; and, for a package containing fissile material and transported by air, the requirements of 7.10.10. No new manufacture of such packaging must be permitted to commence. Changes in the design of the packaging or in the nature or quantity of the authorized radioactive contents which, as determined by the competent authority, would significantly affect safety, must meet the requirements of these Instructions in full. A serial number according to the provision of 5;2.4.5.1 c) must be assigned to and marked on the outside of each packaging.

7.23.2.2 Packagings manufactured to a package design approved by the competent authority under the provisions of the 1985 or 1985 (As Amended 1990) editions of IAEA Safety Series No. 6 may continue to be used subject to the multilateral approval of package design; the mandatory programme of quality assurance in accordance with the requirements of 1;6.3; the activity limits and material restrictions of 2;7.2.4; and, for a package containing fissile material and transported by air, the requirements of 7.10.10. Changes in the design of the packaging or in the nature or quantity of the authorized radioactive contents which, as determined by the competent authority, would significantly affect safety must meet the requirements of these Instructions in full. All packagings for which manufacture begins after 31 December 2006 must meet the requirements of these Instructions in full.

### 7.23.4 Special form radioactive material approved under the 1973, 1973 (As Amended), 1985 and 1985 (As Amended 1990) editions of IAEA Safety Series No. 6

Special form radioactive material manufactured to a design which had received unilateral approval by the competent authority under the 1973, 1973 (As Amended), 1985 or 1985 (As Amended 1990) editions of IAEA Safety Series No. 6 may continue to be used when in compliance with the mandatory programme of quality assurance in accordance with the applicable requirements of 1;6.3. All special form radioactive material manufactured after 31 December 2003 must meet the requirements of these Instructions in full.

**Part 7**

**OPERATOR'S RESPONSIBILITIES**

**INTRODUCTORY NOTE**

This Part details the responsibilities of operators with regard to the acceptance, handling and loading of dangerous goods. However, nothing contained herein should be interpreted as requiring an operator to transport a particular article or substance or as preventing an operator from imposing special requirements on the transport of a particular article or substance. Also, nothing in this Part is intended to preclude a ground handling agent from carrying out some or all of the functions of an operator. However, such ground handling agents are subject to the operator's responsibilities of Part 7.

---

≠

## Chapter 1

### ACCEPTANCE PROCEDURES

*Parts of this Chapter are affected by State Variations AE 7, AE 9, CA 1, CA 4, CA 6, CA 14, CA 15, CA 16, CH 3, CN 1, FR 4, HK 1, IN 1, IN 2, IR 1, IT 1, IT 5, MO 1, NL 3, PL 1, SG 1, UA 1, US 1, US 8, US 10, US 13; see Table A-1*

#### 1.1 CARGO ACCEPTANCE PROCEDURES

1.1.1 Operators' acceptance staff must be adequately trained to assist them in identifying and detecting dangerous goods presented as general cargo.

1.1.2 Cargo acceptance staff should seek confirmation from shippers about the contents of any item of cargo where there are suspicions that it may contain dangerous goods, with the aim of preventing undeclared dangerous goods from being loaded on an aircraft as general cargo. Many innocuous-looking items may contain dangerous goods, and a list of general descriptions which, experience has shown, are often applied to such items is shown in Chapter 6.

#### 1.2 ACCEPTANCE OF DANGEROUS GOODS BY OPERATORS

1.2.1 An operator must not accept for transport aboard an aircraft a package or overpack containing dangerous goods or a freight container containing radioactive material or a unit load device or other type of pallet containing the dangerous goods as described in 1.4.1 b) and c) unless:

- a) it is accompanied by two copies of the dangerous goods transport document; or
- b) the information applicable to the consignment is provided in electronic form; or
- c) where permitted, by alternative documentation.

1.2.2 Where a document is provided, one copy must accompany the consignment to final destination and one copy must be retained by the operator at a location on the ground where it will be possible to obtain access to it within a reasonable period; the document must be retained at this point until the goods have arrived at final destination, after which time it may be stored elsewhere.

1.2.3 When the information applicable to the consignment is provided in electronic form, the information must be available to the operator at all times during transport to final destination. The data must be able to be produced as a paper document without delay. When a paper document is produced, the data must be presented as required by 5.4.

#### 1.3 THE ACCEPTANCE CHECK

1.3.1 An operator must not accept for transport aboard an aircraft a package or overpack containing dangerous goods or a freight container containing radioactive material or a unit load device or other type of pallet containing dangerous goods as described in 1.4 unless the operator has, by use of a checklist, verified the following:

- a) the documentation or, when provided, the electronic data, complies with the detailed requirements specified in 5.4;
- b) the quantity of dangerous goods stated on the dangerous goods transport document is within the limits per package on a passenger or cargo aircraft as appropriate;
- c) the marking of the package, overpack or freight container accords with the details stated on the accompanying dangerous goods transport document and are clearly visible;
- d) where required, the letter in the packaging specification marking designating the packing group for which the design type has been successfully tested is appropriate for the dangerous goods contained within. This does not apply to overpacks where the specification marking is not visible;
- e) proper shipping names, UN numbers, labels, and special handling instructions appearing on the interior package(s) are clearly visible or reproduced on the outside of an overpack;
- f) the labelling of the package, overpack or freight container is as required by 5.3;

- g) the outer packaging of a package is of the type stated on the accompanying dangerous goods transport document and is permitted by the applicable packing instruction;
- h) the package or overpack does not contain different dangerous goods which require segregation from each other according to Table 7-1;
- i) the package, overpack, freight container or unit load device is not leaking and there is no indication that its integrity has been compromised;
- j) an overpack does not contain packages bearing the "Cargo aircraft only" label unless:
  - 1) the packages are assembled in such a way that clear visibility and easy access to them is possible; or
  - 2) the packages are not required to be accessible under 7.2.4.1; or
  - 3) not more than one package is involved;

*Note 1.— Minor discrepancies, such as the omission of dots and commas in the proper shipping name appearing on the transport document or on package markings, or minor variations in hazard labels which do not affect the obvious meaning of the label, are not considered as errors if they do not compromise safety and should not be considered as reason for rejecting a consignment.*

*Note 2.— Where packages are contained in an overpack or freight container, as permitted by 1.4, the checklist should establish the correct marking and labelling of such an overpack or other type of pallet or freight container and not the individual packages contained in them. Where packages are contained in a unit load device, as permitted by 1.4.1, the checklist should not require the checking of packages individually for the correct marking and labelling.*

*Note 3.— An acceptance check is not required for dangerous goods in excepted quantities and radioactive material in excepted packages.*

**Table 7-1. Segregation between packages**

Hazard label	Class or division							
	1	2	3	4.2	4.3	5.1	5.2	8
1	Note 1	Note 2						
2	Note 2	—	—	—	—	—	—	—
3	Note 2	—	—	—	—	x	—	—
4.2	Note 2	—	—	—	—	x	—	—
4.3	Note 2	—	—	—	—	—	—	x
5.1	Note 2	—	x	x	—	—	—	—
5.2	Note 2	—	—	—	—	—	—	—
8	Note 2	—	—	—	x	—	—	—

An "x" at the intersection of a row and column indicates that packages containing these classes of dangerous goods may not be stowed next to or in contact with each other, or in a position which would allow interaction in the event of leakage of the contents. Thus, a package containing Class 3 dangerous goods may not be stowed next to or in contact with a package containing Division 5.1 dangerous goods.

*Note 1.— See 2.2.2.2 through 2.2.2.5.*

*Note 2.— This class or division must not be stowed together with explosives other than those in Division 1.4, Compatibility Group S.*

*Note 3.— Packages containing dangerous goods with multiple hazards in the class or divisions which require segregation in accordance with Table 7-1 need not be segregated from other packages bearing the same UN number.*

---

## 1.4 ACCEPTANCE OF FREIGHT CONTAINERS AND UNIT LOAD DEVICES

1.4.1 An operator must not accept from a shipper a freight container or a unit load device containing dangerous goods other than:

- a) a freight container for radioactive material (see 6;7.1);
- b) a unit load device or other type of pallet containing consumer commodities prepared according to Packing Instruction 910;
- c) a unit load device or other type of pallet containing dry ice used as a refrigerant for other than dangerous goods prepared according to Packing Instruction 904; or
- d) a unit load device or other type of pallet containing magnetized material.

1.4.2 When an operator accepts a unit load device or other type of pallet containing consumer commodities, dry ice or magnetized material as permitted by 1.4.1, the operator must attach an identification tag as required by 2.7.1 to the unit load device.

## 1.5 SPECIAL RESPONSIBILITIES IN ACCEPTING INFECTIOUS SUBSTANCES

### 1.5.1 Routing

Whatever the mode used, transport must be made by the quickest possible routing. If trans-shipment is necessary, precautions must be taken to ensure special care, expeditious handling and monitoring of the substances in transit.

## 1.6 UNDELIVERABLE CONSIGNMENTS OF RADIOACTIVE MATERIAL

Where a consignment is undeliverable, the consignment must be placed in a safe location and the appropriate competent authority must be informed as soon as possible and a request made for instructions on further action.

---

## Chapter 2

### STORAGE AND LOADING

*Parts of this Chapter are affected by State Variations AE 6, CA 1, CA 4, IR 2, JP 10, JP 11, JP 12, JP 22, US 15; see Table A-1*

#### 2.1 LOADING RESTRICTIONS ON THE FLIGHT DECK AND FOR PASSENGER AIRCRAFT

2.1.1 Dangerous goods must not be carried in an aircraft cabin occupied by passengers or on the flight deck of an aircraft, except as permitted by 1;2.2.1 and 8;1 and for radioactive material, excepted packages under 2;7.2.4.1.1. Dangerous goods may be carried in a main deck cargo compartment of a passenger aircraft provided that compartment meets all the certification requirements for a Class B or a Class C aircraft cargo compartment. Dangerous goods bearing the "Cargo aircraft only" label must not be carried on a passenger aircraft.

2.1.2 Under the conditions specified in S-7;2.2 of the Supplement, the State of Origin may approve the transport of dangerous goods in main deck cargo compartments of passenger aircraft that do not meet the requirements in 2.1.1.

#### 2.2 INCOMPATIBLE DANGEROUS GOODS

##### 2.2.1 Segregation

Packages containing dangerous goods which might react dangerously one with another must not be stowed on an aircraft next to each other or in a position that would allow interaction between them in the event of leakage. As a minimum, the segregation scheme shown in Table 7-1 must be followed in order to maintain acceptable segregation between packages containing dangerous goods having different hazards. The scheme applies irrespective of whether the hazard is the primary or subsidiary risk.

##### 2.2.2 Separation of explosive substances and articles

2.2.2.1 Only explosives in Division 1.4, Compatibility Group S, are permitted to be transported on passenger aircraft. Only the following explosives may be transported on a cargo aircraft:

Division 1.3: Compatibility Groups C, G

Division 1.4: Compatibility Groups B, C, D, E, G, S.

2.2.2.2 The extent to which explosives may be stowed together in an aircraft is determined by their "compatibility". Explosives are considered to be compatible if they can be stowed together without significantly increasing either the probability of an accident or, for a given quantity, the magnitude of the effects of such an accident.

2.2.2.3 Explosives in Compatibility Group S may be stowed with explosives in all compatibility groups.

2.2.2.4 Except as provided for in 2.2.2.5, explosives of different compatibility groups may be stowed together whether or not they belong to the same division.

2.2.2.5 Explosives in Division 1.4B and explosives in Division 1.3 must not be stowed together. Division 1.4B and Division 1.3 explosives must be loaded into separate unit load devices and, when stowed aboard the aircraft, the unit load devices must be separated by other cargo with a minimum separation distance of 2 m. When not loaded in a unit load device, Division 1.4B and Division 1.3 explosives must be loaded into different, non-adjacent loading positions and separated by other cargo with a minimum separation distance of 2 m.

#### 2.3 HANDLING AND LOADING OF PACKAGES CONTAINING LIQUID DANGEROUS GOODS

During the course of air transport, a package of dangerous goods bearing the package orientation label prescribed in 5;3 must be loaded and stowed aboard an aircraft and handled at all times in accordance with such a label. Single packagings with end closures containing liquid dangerous goods must be loaded and stowed aboard an aircraft with those closures upwards, notwithstanding that such single packages may also have side closures.

## 2.4 LOADING AND SECURING OF DANGEROUS GOODS

≠

### 2.4.1 Loading on cargo aircraft

2.4.1.1 Packages or overpacks of dangerous goods bearing the “Cargo aircraft only” label must be loaded on a cargo aircraft in accordance with one of the following provisions:

- a) in a Class C aircraft cargo compartment; or
- b) in a unit load device equipped with a fire detection/suppression system equivalent to that required by the certification requirements of a Class C aircraft cargo compartment as determined by the appropriate national authority; or
- c) in such a manner that in the event of an emergency involving such packages or overpacks, a crew member or other authorized person can access those packages or overpacks, and can handle and, where size and mass permit, separate such packages or overpacks from other cargo.

2.4.1.2 The requirements of 2.4.1.1 do not apply to:

- a) substances of Class 3, Packing Group III, without a subsidiary risk;
- b) toxic and infectious substances (Class 6);
- c) radioactive material (Class 7);
- d) miscellaneous dangerous goods (Class 9).

*Note — When transporting goods in a non-pressurized cargo hold, there will be a large pressure differential at high altitudes. Packages that are filled at a normal atmospheric pressure may not be capable of withstanding this pressure differential. Confirmation of the suitability of the packaging from the shipper may be required.*

≠

### 2.4.2 Securing of dangerous goods

The operator must secure dangerous goods in the aircraft in a manner that will prevent any movement. For packages or overpacks containing radioactive material, the securing must be adequate to ensure that the separation requirements of 2.9.3 are met at all times.

≠

### 2.4.3 General loading requirements

When dangerous goods subject to the provisions herein are loaded in an aircraft, the operator must protect the packages of dangerous goods from being damaged, including by the movement of baggage, mail, stores or other cargo. Particular attention must be paid to the handling of packages during their preparation for transport, the type of aircraft on which they are to be carried and the method required to load that aircraft, so that accidental damage is not caused through dragging or mishandling of the packages.

## 2.5 DAMAGED PACKAGES OF DANGEROUS GOODS

Where any package of dangerous goods loaded on an aircraft appears to be damaged or leaking, the operator must remove such package from the aircraft, or arrange for its removal by an appropriate authority or organization, and thereafter arrange for its safe disposal. In the case of a package which appears to be leaking, the operator must ensure the remainder of the consignment is in a proper condition for transport by air and that no other package, baggage or cargo has been contaminated. See 3.1 and 3.2 of this Part concerning action to be taken in the event of damage to packages containing infectious substances in Class 6 and radioactive materials in Class 7.

## 2.6 REPLACEMENT OF LABELS

When an operator discovers that labels for packages of dangerous goods have become lost, detached or illegible the operator must replace them with appropriate labels in accordance with the information provided on the dangerous goods transport document.

## 2.7 IDENTIFICATION OF UNIT LOAD DEVICES CONTAINING DANGEROUS GOODS

2.7.1 Each unit load device containing dangerous goods which require a class hazard label must clearly display on its exterior an indication that dangerous goods are contained within the unit load device, unless those hazard class labels are themselves visible.

2.7.2 This indication must be provided by attaching to the unit load device an identification tag having a border of prominent red hatchings on both sides and the minimum dimensions of 148 mm × 210 mm. The primary and subsidiary hazard class(es) or division(s) numbers of such dangerous goods must be clearly marked on this tag.

2.7.3 If the unit load device contains packages bearing the “Cargo aircraft only” label, either that label must be visible or the tag must indicate that the unit load device can be loaded only on a cargo aircraft.

2.7.4 The tag must be removed from the unit load device immediately after the dangerous goods have been unloaded.

## 2.8 STOWAGE OF TOXIC AND INFECTIOUS SUBSTANCES

Substances of Class 6 (toxic and category A infectious substances) and substances requiring a subsidiary risk “Toxic” label must not be carried in the same compartment of an aircraft with animals, substances marked as or known to be foodstuffs, feeds or other edible substances intended for consumption by humans or by animals, unless either the toxic or category A infectious substances and the foodstuffs or animals are loaded in separate unit load devices and when stowed aboard the aircraft the unit load devices are not adjacent to each other, or the toxic or category A infectious substances are loaded in one closed unit load device and the foodstuffs or animals are loaded in another closed unit load device.

## 2.9 SPECIAL PROVISIONS APPLICABLE TO THE CARRIAGE OF RADIOACTIVE MATERIAL

### 2.9.1 Limitation of exposure of persons to radiation

2.9.1.1 The radiation exposure of transport and storage personnel must be so controlled that none of them are likely to receive a radiation dose in excess of that permitted for members of the public. In special cases, arrangements may be made with the competent authority for radiological control to have such personnel classified as radiation workers and to comply with the necessary provisions.

2.9.1.2 All relevant transport and storage personnel must receive such instructions as are necessary concerning the hazards involved and the precautions to be observed.

2.9.1.3 The practice should be followed of keeping exposure to radiation as low as reasonably achievable. The separation distances shown in Tables 7-2 and 7-3 are minimum values, and greater distances should be used where feasible. As far as possible, packages of radioactive materials stowed in underfloor cargo compartments of passenger aircraft should be placed on the compartment floor.

+ *Note.— The separation distances from packages of radioactive material to passengers specified in Table 7-2 are based on a 0.02 mSv/h reference dose rate at a seat height of 0.4 m.*

### 2.9.2 Activity limits

The total activity in all aircraft, for carriage of LSA material or SCO in Type IP-1, Type IP-2, Type IP-3 or unpackaged, must not exceed the limits shown in Table 7-4.

### 2.9.3 Stowage during transport and storage in transit

2.9.3.1 Consignments must be securely stowed.

2.9.3.2 Provided that its average surface heat flux does not exceed 15 W/m<sup>2</sup> and that the immediately surrounding cargo is not in sacks or bags, a package or overpack may be carried or stored among packaged general cargo without any special stowage provisions except as may be specifically required by the competent authority in an applicable approval certificate.

2.9.3.3 Loading of freight containers and accumulation of packages, overpacks and freight containers must be controlled as follows:

a) Except under the condition of exclusive use, the total number of packages, overpacks and freight containers aboard a single aircraft must be so limited that the total sum of the transport indexes aboard the aircraft does not exceed the values shown in Table 7-5. For consignments of LSA-I material, there is no limit on the sum of the transport indexes;

≠ b) Where a consignment is transported under exclusive use, there is no limit on the sum of the transport indexes aboard a single aircraft, but the requirement on minimum segregation distances established in 2.9.6 applies;

- c) The radiation level under routine conditions of transport must not exceed 2 mSv/h at any point on, and 0.1 mSv/h at 2 m from, the external surface of the aircraft;
- d) The total sum of the criticality safety indexes in a freight container and aboard an aircraft must not exceed the values shown in Table 7-6.

2.9.3.4 Any package or overpack having either a transport index greater than 10, or any consignment having a criticality safety index greater than 50, must be transported only under exclusive use.

#### **2.9.4 Segregation of packages containing fissile material during transport and storage in transit**

2.9.4.1 Any group of packages, overpacks and freight containers containing fissile material stored in transit in any one storage area must be so limited that the total sum of the criticality safety indexes in the group does not exceed 50. Each group must be stored so as to maintain a spacing of at least 6 m from other such groups.

**Table 7-2. Minimum distance from surface of packages, overpacks and freight containers of radioactive material to the nearest inside surface of passenger cabin or flight deck partitions or floors, irrespective of carriage duration**

<i>Total sum of transport indexes</i>	<i>Minimum distance (metres)</i>
0.1 – 1.0	0.30
1.1 – 2.0	0.50
2.1 – 3.0	0.70
3.1 – 4.0	0.85
4.1 – 5.0	1.00
5.1 – 6.0	1.15
6.1 – 7.0	1.30
7.1 – 8.0	1.45
8.1 – 9.0	1.55
9.1 – 10.0	1.65
10.1 – 11.0	1.75
11.1 – 12.0	1.85
12.1 – 13.0	1.95
13.1 – 14.0	2.05
14.1 – 15.0	2.15
15.1 – 16.0	2.25
16.1 – 17.0	2.35
17.1 – 18.0	2.45
18.1 – 20.0	2.60
20.1 – 25.0	2.90
25.1 – 30.0	3.20
30.1 – 35.0	3.50
35.1 – 40.0	3.75
40.1 – 45.0	4.00
45.1 – 50.0	4.25

If more than one package, overpack or freight container is placed in the aircraft, the minimum separation distance for each individual package, overpack or freight container must be determined in accordance with the above table, on the basis of the sum of the transport index numbers of the individual packages, overpacks or freight containers. Alternatively, if the packages, overpacks or freight containers are separated into groups, the minimum distance from the nearest inside surface of the passenger cabin or flight deck partitions or floors to each group is the distance applicable to the sum of the transport indexes within the individual groups, provided that each group is separated from each other group by at least three times the distance applicable to the one that has the larger sum of transport indexes.

*Note.— For total sum of transport indexes over 50 to be carried by cargo aircraft only, see Table 7-3.*

**Table 7-3. Minimum distance from surface of packages, overpacks and freight containers of radioactive material, carried by cargo aircraft only, to the nearest inside surface of the flight deck partitions or floor, or other areas occupied by personnel, irrespective of carriage duration**

<i>Total sum of transport indexes</i>	<i>Minimum distance (metres)</i>	<i>Total sum of transport indexes</i>	<i>Minimum distance (metres)</i>
50.1 – 60.0	4.65	180.1 – 190.0	8.55
60.1 – 70.0	5.05	190.1 – 200.0	8.75
70.1 – 80.0	5.45	200.1 – 210.0	9.00
80.1 – 90.0	5.80	210.1 – 220.0	9.20
90.1 – 100.0	6.10	220.1 – 230.0	9.40
100.1 – 110.0	6.45	230.1 – 240.0	9.65
110.1 – 120.0	6.70	240.1 – 250.0	9.85
120.1 – 130.0	7.00	250.1 – 260.0	10.05
130.1 – 140.0	7.30	260.1 – 270.0	10.25
140.1 – 150.0	7.55	270.1 – 280.0	10.40
150.1 – 160.0	7.80	280.1 – 290.0	10.60
160.1 – 170.0	8.05	290.1 – 300.0	10.80
170.1 – 180.0	8.30		

If more than one package, overpack or freight container is placed in the aircraft, the minimum separation distance for each individual package, overpack or freight container must be determined in accordance with the above table, on the basis of the sum of the transport index numbers of the individual packages, overpacks or freight containers. Alternatively, if the packages, overpacks or freight containers are separated into groups, the minimum distance from the nearest inside surface of the flight deck partition or floor to each group is the distance applicable to the sum of transport indexes within the individual groups, provided that each group is separated from each other group by at least three times the distance applicable to the one that has the larger sum of transport indexes.

*Note.— For smaller sums of transport indexes, see Table 7-2. Distances for total sum of transport indexes over 200 apply to exclusive use only.*

**Table 7-4. Aircraft activity limits for LSA material and SCO in industrial packages**

<i>Nature of material</i>	<i>Activity limit for aircraft</i>
LSA-I	No limit
LSA-II and LSA-III non-combustible solids	No limit
LSA-II and LSA-III combustible solids, and all liquids and gases	100 A <sub>2</sub>
SCO	100 A <sub>2</sub>

**Table 7-5. Transport index limits for freight containers and aircraft not under exclusive use**

<i>Type of freight container or aircraft</i>	<i>Limit on total sum of transport indexes in a freight container or aboard an aircraft</i>
Freight container — small	50
Freight container — large	50
Aircraft	
Passenger	50
Cargo	200

**Table 7-6. Critical safety indexes limits for freight containers and aircraft containing fissile material**

<i>Type of freight container or aircraft</i>	<i>Limit on total sum of criticality safety indexes in a freight container or aboard an aircraft</i>	
	<i>Not under exclusive use</i>	<i>Under exclusive use</i>
Freight container — small	50	n.a.
Freight container — large	50	100
Aircraft		
Passenger	50	n.a.
Cargo	50	100

2.9.4.2 Where the total sum of the criticality safety indexes on board an aircraft or in a freight container exceeds 50, as permitted in Table 7-6, storage must be such as to maintain a spacing of at least 6 m from other groups of packages, overpacks or freight containers containing fissile material or other conveyances carrying radioactive material.

### 2.9.5 Transport by air

2.9.5.1 Type B(M) packages and consignments under exclusive use must not be transported on passenger aircraft.

2.9.5.2 Vented Type B(M) packages, packages which require external cooling by an ancillary cooling system, packages subject to operational controls during transport, and packages containing liquid pyrophoric materials must not be transported by air.

2.9.5.3 Packages or overpacks having a surface radiation level greater than 2 mSv/h must not be transported by air except by special arrangement.

2.9.5.4 Except in the case of shipment under special arrangement, mixing of packages of different kinds of radioactive material, including fissile material, and mixing of different kinds of packages with different transport indexes is permitted without specific competent authority approval. In the case of shipments under special arrangement, mixing is not permitted except as specifically authorized under the special arrangement.

### 2.9.6 Separation

#### 2.9.6.1 Separation from persons

Categories II — Yellow and III — Yellow packages, overpacks or freight containers must be separated from persons. The minimum separation distances to be applied are shown in Tables 7-2 and 7-3 and these distances are from the surface of the packages, overpacks or freight containers to the nearest inside surface of the passenger cabin or flight deck partitions or floors, irrespective of the duration of the carriage of the radioactive material. Table 7-3 applies only when radioactive material is being carried by a cargo aircraft, and in those circumstances the minimum distances must be applied as above and also to any other areas occupied by persons.

#### 2.9.6.2 Separation from undeveloped photographic film

Categories II — Yellow and III — Yellow packages, overpacks or freight containers must be separated from undeveloped photographic films or plates. The minimum separation distances to be applied are shown in Table 7-7 and these distances are from the surface of the packages, overpacks or freight containers to the surface of the packages of undeveloped photographic films or plates.

#### 2.9.6.3 Separation from live animals

Categories II — Yellow and III — Yellow packages, overpacks or freight containers must be separated from live animals by a distance of at least 0.5 metres for journeys not exceeding 24 hours, and by a distance of at least 1.0 metres for journeys longer than 24 hours.

## 2.10 LOADING OF MAGNETIZED MATERIAL

Magnetized material must not be loaded in such a position that it will have a significant effect on the direct-reading magnetic compasses or on the master compass detector units. The significant effect will be produced if the magnetic field strength of the magnetized materials reaches 0.418 A/m at the location of aircraft compasses or compass detector units. The minimum stowage distance of the magnetized material to the aircraft compasses or compass detector units will depend on the intensity of the magnetized material's field strength and varies from 1.5 m for material which just meets the threshold level of the

magnetized material definition in 2;9, to 4.6 m for materials which possesses the maximum field strength permitted by Packing Instruction 902 in 4;11. If the minimum stowage distance of a specific item, in its packed form, from the compass or detector units is not known and cannot be estimated, or if material which is to be transported affects the aircraft's compasses, a special minimum stowage distance check must be made on the freight to be transported. Multiple packages may produce a cumulative effect. See Packing Instruction 902 for determination of shielding requirements.

- + *Note.— Masses of ferro-magnetic metals such as automobiles, automobile parts, metal fencing, piping and metal construction material, even if not meeting the definition of magnetized materials may be subject to the operator's special stowage requirements since they may affect aircraft instruments, particularly the compasses. Additionally, packages or items of material which individually do not meet the definition of magnetized materials but cumulatively may do so, may also be subject to the operator's special stowage requirements.*

**Table 7-7. Minimum distance in metres from surface of each package, overpack or freight container of radioactive material to undeveloped photographic films or plates, for carriage lasting up to 48 hours**

Total sum of transport indexes	Duration of carriage					
	2 hours or less	2-4 hours	4-8 hours	8-12 hours	12-24 hours	24-48 hours
1	0.4	0.6	0.9	1.1	1.5	2.2
2	0.6	0.8	1.2	1.5	2.2	3.1
3	0.7	1.0	1.5	1.8	2.6	3.8
4	0.8	1.2	1.7	2.2	3.1	4.4
5	0.8	1.3	1.9	2.4	3.4	4.8
10	1.4	2.0	2.8	3.5	4.9	6.9
20	2.0	2.8	4.0	4.9	6.9	10.0
30	2.4	3.5	4.9	6.0	8.6	12.0
40	2.9	4.0	5.7	6.9	10.0	14.0
50	3.2	4.5	6.3	7.9	11.0	16.0

*Note.— The above is calculated so that the radiation dose received by the films does not exceed 0.1 mSv (10 mrem).*

## 2.11 LOADING OF DRY ICE

2.11.1 Dry ice (carbon dioxide, solid), when shipped by itself or when used as a refrigerant for other commodities, may be carried provided the operator has made suitable arrangements dependent on the aircraft type, the aircraft ventilation rates, the method of packing and stowing, whether animals will be carried on the same flight, and other factors. The operator must ensure that ground staff are informed that the dry ice is being loaded or is on board the aircraft.

2.11.2 Where dry ice is contained in a unit load device or other type of pallet prepared by a single shipper in accordance with Packing Instruction 904 and the operator, after acceptance, adds additional dry ice, then the operator must ensure that the information provided to the pilot-in-command reflects that revised quantity of dry ice.

*Note.— For arrangements between the shipper and operator see Packing Instruction 904.*

## 2.12 LOADING OF EXPANDABLE POLYMERIC BEADS

A total of not more than 100 kg net mass of expandable polymeric beads (or granules), or plastic moulding materials, referenced to Packing Instruction 908, may be carried in any inaccessible hold on any aircraft.

## 2.13 HANDLING OF SELF-REACTIVE SUBSTANCES AND ORGANIC PEROXIDES

During the course of transport, packages or unit load devices containing self-reactive substances of Division 4.1 or organic peroxides of Division 5.2 must be shaded from direct sunlight, stored away from all sources of heat in a well-ventilated area.

## Chapter 3

### INSPECTION AND DECONTAMINATION

*Parts of this Chapter are affected by State Variations AE 4, AE 7, CA 4, IT 4;  
see Table A-1*

#### 3.1 INSPECTION FOR DAMAGE OR LEAKAGE

3.1.1 It is the operator's responsibility to ensure that a package or overpack containing dangerous goods is not loaded onto an aircraft or into a unit load device unless it has been inspected immediately prior to loading and found free from evidence of leakage or damage.

3.1.2 A unit load device must not be loaded aboard an aircraft unless the device has been inspected and found free from any evidence of leakage from or damage to any dangerous goods contained therein.

3.1.3 Packages or overpacks containing dangerous goods must be inspected for signs of damage or leakage upon unloading from the aircraft or unit load device. If evidence of damage or leakage is found, the position where the dangerous goods or unit load device was stowed on the aircraft must be inspected for damage or contamination and any hazardous contamination removed. The special responsibilities of operators regarding infectious substances are detailed in 3.1.4.

3.1.4 If any person responsible for the carriage of packages containing infectious substances becomes aware of damage to or leakage from such a package, that person must:

- a) avoid handling the package or keep handling to a minimum;
- b) inspect adjacent packages for contamination and put aside any that may have been contaminated;
- c) inform the appropriate public health authority or veterinary authority and provide information on any other countries of transit where persons may have been exposed to danger;
- d) notify the shipper and/or the consignee.

#### 3.2 DAMAGED OR LEAKING PACKAGES OF RADIOACTIVE MATERIAL, CONTAMINATED PACKAGINGS

3.2.1 If it is evident that a package is damaged or leaking, or if it is suspected that the package may have leaked or been damaged, access to the package must be restricted and a qualified person must, as soon as possible, assess the extent of contamination and the resultant radiation level of the package. The scope of the assessment must include the package, the aircraft, the adjacent loading and unloading areas and, if necessary, all other material which has been carried in the aircraft. When necessary, additional steps for the protection of persons' property and the environment, in accordance with provisions established by the relevant competent authority, must be taken to overcome and minimize the consequences of such leakage or damage.

3.2.2 Packages damaged or leaking radioactive contents in excess of allowable limits for normal conditions of transport may be removed to an acceptable interim location under supervision, but must not be forwarded until repaired or reconditioned and decontaminated.

3.2.3 An aircraft and equipment used regularly for the transport of radioactive material must be periodically checked to determine the level of contamination. The frequency of such checks must be related to the likelihood of contamination and the extent to which radioactive material is transported.

3.2.4 Except as provided in 3.2.5, any aircraft or equipment or part thereof which has become contaminated above the limits specified in 4;9.1.2 in the course of the transport of radioactive material, or which shows a radiation level in excess of 5 mSv/h at the surface, must be decontaminated as soon as possible by a qualified person and must not be re-used unless the non-fixed contamination does not exceed the limits specified in 4;9.1.2, and the radiation level resulting from the fixed contamination on surfaces after decontamination is less than 5 µSv/h at the surface.

3.2.5 An overpack, freight container, or aircraft dedicated to the transport of radioactive material under exclusive use must be excepted from the requirements of 4;9.1.4 and 3.2.4 solely with regard to its internal surfaces and only for as long as it remains under that specific exclusive use.

### **3.3 DEALING WITH SUSPECTED CONTAMINATED BAGGAGE OR CARGO**

If an operator becomes aware that baggage or cargo not identified as containing dangerous goods has been contaminated and it is suspected that dangerous goods may be the cause of the contamination, the operator must take reasonable steps to identify the nature and source of the contamination before proceeding with the loading of the contaminated baggage or cargo. If the contaminating substance is found or suspected to be a substance classified as dangerous goods by these Instructions, the operator must isolate the baggage or cargo and take appropriate steps to nullify any identified hazard before the baggage or cargo is transported further by air.

---

## Chapter 4

### PROVISION OF INFORMATION

*Parts of this Chapter are affected by State Variations AE 8, AU 4, CA 4, CA 19, CH 2, FR 9, FR 10, GB 4, MY 4, MY 5, US 12, US 13, US 15, VU 3, VU 4; see Table A-1*

#### INTRODUCTORY NOTE

Operators' responsibilities for the provision of information to passengers are shown in Part 8.

#### 4.1 INFORMATION TO THE PILOT-IN-COMMAND

4.1.1 The operator of an aircraft in which dangerous goods are to be carried must provide the pilot-in-command, as early as practicable before departure of the aircraft, with accurate and legible written or printed information concerning dangerous goods that are to be carried as cargo.

*Note.— This includes information about dangerous goods loaded at a previous departure point and which are to be carried on the subsequent flight.*

- ≠ Except as otherwise provided, this information must include the following:
  - a) the air waybill number (when issued);
  - ≠ b) the proper shipping name (supplemented with the technical name(s) if appropriate; see 3;1) and UN Number or ID number as listed in these Instructions. When chemical oxygen generators contained in protective breathing equipment (PBE) are being transported under Special Provision A144, the proper shipping name of "oxygen generator, chemical" must be supplemented with the statement "Aircrew protective breathing equipment (smoke hood) in accordance with Special Provision A144".
  - c) the class or division, and subsidiary risk(s) corresponding to the subsidiary risk label(s) applied, by numerals, and in the case of Class 1, the compatibility group;
  - d) the packing group shown on the dangerous goods transport document;
  - e) the number of packages and their exact loading location. For radioactive material see g) below;
  - ≠ f) the net quantity, or gross mass if applicable, of each package, except that this does not apply to radioactive material or other dangerous goods where the net quantity or gross mass is not required on the dangerous goods transport document (see 5;4.1.4). For a consignment consisting of multiple packages containing dangerous goods bearing the same proper shipping name and UN number or ID number, only the total quantity and an indication of the quantity of the largest and smallest package at each loading location need to be provided. For unit load devices or other types of pallets containing consumer commodities accepted from a single shipper, the number of packages and the average gross mass need to be provided;
  - g) for radioactive material the number of packages, overpacks or freight containers, their category, their transport index (if applicable) and their exact loading location;
  - h) whether the package must be carried on cargo aircraft only;
  - i) the aerodrome at which the package(s) is to be unloaded;
  - j) where applicable, an indication that the dangerous goods are being carried under a State exemption; and
  - k) the telephone number where a copy of the information provided to the pilot-in-command can be obtained during the flight if the operator allows the pilot-in-command to provide a telephone number instead of the details about the dangerous goods on board the aircraft, as specified in 4.3.
- + 4.1.2 For UN 1845 — **Carbon dioxide, solid** (dry ice), only the UN number, proper shipping name, class, total quantity in each hold on the aircraft and the aerodrome at which the package(s) is to be unloaded need to be provided.

4.1.3 The information provided to the pilot-in-command must also include a signed confirmation, or some other indication, from the person responsible for loading the aircraft that there was no evidence of any damage to or leakage from the packages loaded on the aircraft.

4.1.4 The information provided to the pilot-in-command must be readily available to the pilot-in-command during flight.

4.1.5 This information provided to the pilot-in-command should be presented on a dedicated form and should not be by means of air waybills, dangerous goods transport documents, invoices, etc.

4.1.6 The pilot-in-command must indicate on a copy of the information provided to the pilot-in-command, or in some other way, that the information has been received.

4.1.7 A legible copy of the information provided to the pilot-in-command must be retained on the ground. This copy must have an indication on it, or with it, that the pilot-in-command has received the information. This copy, or the information contained in it, must be readily accessible to the aerodromes of last departure and next scheduled arrival point, until after the flight to which the information refers.

4.1.8 In addition to the languages which may be required by the State of the Operator, English should be used for the information provided to the pilot-in-command.

4.1.9 In the event that the volume of information provided to the pilot-in-command is such that in-flight radiotelephony transmission would be impracticable in an emergency situation, a summary of the information should also be provided by the operator, containing at least the quantities and class or division of the dangerous goods in each cargo compartment.

## 4.2 INFORMATION TO BE PROVIDED TO EMPLOYEES

An operator must provide such information in the operations manual and/or other appropriate manuals as will enable flight crews and other employees to carry out their responsibilities with regard to the transport of dangerous goods. This information must include instructions as to the action to be taken in the event of emergencies involving dangerous goods, and details of the location and numbering system of cargo compartments together with:

- a) the maximum quantity of dry ice permitted in each compartment; and
- b) if radioactive material is to be carried, instructions on the loading of such dangerous goods based on the requirements of 7;2.9.

Where applicable, this information must also be provided to ground handling agents.

## 4.3 INFORMATION TO BE PROVIDED BY THE PILOT-IN-COMMAND IN CASE OF IN-FLIGHT EMERGENCY

If an in-flight emergency occurs, the pilot-in-command must, as soon as the situation permits, inform the appropriate air traffic services unit, for the information of aerodrome authorities, of any dangerous goods carried as cargo on board an aircraft. Wherever possible this information should include the proper shipping name and/or UN number, the class/division and, for Class 1, the compatibility group, any identified subsidiary risk(s), the quantity and the location on board the aircraft, or a telephone number where a copy of the information provided to the pilot-in-command can be obtained. When it is not considered possible to include all the information, those parts thought most relevant in the circumstances or a summary of the quantities and class or division of dangerous goods in each cargo compartment should be given.

## 4.4 REPORTING OF DANGEROUS GOODS ACCIDENTS AND INCIDENTS

An operator must report dangerous goods accidents and incidents to the appropriate authorities of the State of the Operator and the State in which the accident or incident occurred in accordance with the reporting requirements of those appropriate authorities.

+ *Note.— This includes incidents involving dangerous goods that are not subject to all or part of the Technical Instructions through the application of an exception or of a special provision (e.g. an incident involving the short circuiting of a dry cell battery that is required to meet short circuit prevention conditions in a special provision of 3;3).*

## 4.5 REPORTING OF UNDECLARED OR MISDECLARED DANGEROUS GOODS

An operator must report any occasion when undeclared or misdeclared dangerous goods are discovered in cargo. Such a report must be made to the appropriate authorities of the State of the Operator and the State in which this occurred. An

operator must also report any occasion when dangerous goods not permitted under 8;1.1.1 are discovered in passengers' baggage. Such a report must be made to the appropriate authority of the State in which this occurred.

#### 4.6 INFORMATION BY THE OPERATOR IN CASE OF AN AIRCRAFT ACCIDENT OR INCIDENT

4.6.1 In the event of:

- a) an aircraft accident; or
- b) a serious incident where dangerous goods carried as cargo may be involved,

the operator of the aircraft carrying dangerous goods as cargo must, without delay, provide to emergency services responding to the accident or serious incident, information about the dangerous goods on board, as shown on the copy of the information provided to the pilot-in-command. As soon as possible, the operator must also provide this information to the appropriate authorities of the State of the Operator and the State in which the accident or serious incident occurred.

4.6.2 In the event of an aircraft incident, if requested to do so, the operator of an aircraft carrying dangerous goods as cargo must, without delay, provide to emergency services responding to the incident and to the appropriate authority of the State in which the incident occurred, information about the dangerous goods on board, as shown on the copy of the information provided to the pilot-in-command.

*Note.— The terms “accident”, “serious incident” and “incident” are as defined in Annex 13.*

4.6.3 Operators must address the provisions of 4.6.1 and 4.6.2 in appropriate manuals and accident contingency plans.

#### 4.7 CARGO ACCEPTANCE AREAS — PROVISION OF INFORMATION

An operator or the operator's handling agent must ensure that notices giving information about the transport of dangerous goods, sufficient in number and prominently displayed, are provided at acceptance points for cargo.

#### 4.8 EMERGENCY RESPONSE INFORMATION

The operator must ensure that for consignments for which a dangerous goods transport document is required by these Instructions, appropriate information is immediately available at all times for use in emergency response to accidents and incidents involving dangerous goods in air transport. The information must be available to the pilot-in-command and can be provided by:

- a) the ICAO document *Emergency Response Guidance for Aircraft Incidents Involving Dangerous Goods* (Doc 9481); or
- b) any other document which provides similar information concerning the dangerous goods on board.

#### 4.9 TRAINING

- ≠ An operator must ensure training is provided in accordance with the detailed requirements of 1;4 to all relevant employees, including those of agencies employed to act on the operator's behalf, to enable them to carry out their responsibilities with regard to the transport of dangerous goods, passengers and their baggage, cargo, mail and stores.

#### 4.10 RETENTION OF DOCUMENTS

The operator must ensure that at least one copy of the documents appropriate to the transport by air of a consignment of dangerous goods is retained for a minimum period of three months, or such other period as specified by the States concerned, after the flight on which the dangerous goods were transported. As a minimum, the documents which must be retained are the dangerous goods transport documents, the acceptance checklist (when this is in a form which requires physical completion) and the written information to the pilot-in-command.

*Note.— Where the documents are kept electronically or in a computer system, they should be capable of being reproduced in a printed manner.*

## Chapter 5

### PROVISIONS CONCERNING PASSENGERS AND CREW

#### 5.1 INFORMATION TO PASSENGERS

5.1.1 An operator must ensure that information on the types of dangerous goods which a passenger is forbidden to transport aboard an aircraft is provided with the passenger ticket or made available in another manner to passengers prior to the check-in process.

≠ 5.1.2 An operator or the operator's handling agent and the airport operator must ensure that notices warning passengers of the types of dangerous goods which they are forbidden to transport aboard an aircraft are prominently displayed, in sufficient number, at each of the places at an airport where tickets are issued, passengers are checked in and aircraft boarding areas are maintained, and at any other location where passengers are checked in. These notices must include visual examples of dangerous goods forbidden from transport aboard an aircraft.

+ *Note.— Existing notices that do not include visual examples of dangerous goods may continue in place until 31 December 2009 after which time the requirements specified above will apply.*

#### 5.2 PASSENGER CHECK-IN PROCEDURES

5.2.1 Operators' check-in staff must be adequately trained to assist them in identifying and detecting dangerous goods carried by passengers other than as permitted in 8;1.1.2.

5.2.2 With the aim of preventing dangerous goods, which passengers are not permitted to have, from being taken aboard an aircraft in passengers' baggage or on their person, check-in staff should seek confirmation from a passenger that they are not carrying dangerous goods that are not permitted, and seek further confirmation about the contents of any item where there are suspicions that it may contain dangerous goods that are not permitted. Many innocuous-looking items may contain dangerous goods, and a list of general descriptions which, experience has shown, often apply to such items is shown in 7;6.

---

## Chapter 6

### PROVISIONS TO AID RECOGNITION OF UNDECLARED DANGEROUS GOODS

6.1 With the aim of preventing undeclared dangerous goods from being loaded on an aircraft and of preventing passengers from taking on board those dangerous goods which they are not permitted to have in their baggage (see 8;1.1.2), information about:

- a) general descriptions that are often used for items in cargo or in passengers' baggage which may contain dangerous goods;
- b) other indications that dangerous goods may be present (e.g. labels, markings); and
- c) those dangerous goods which may be carried by passengers in accordance with 8;1.1.2,

must be provided to cargo acceptance staff and passenger check-in staff as appropriate and must be readily available to such staff. The following is a list of general descriptions and the types of dangerous goods that may be included in any item bearing that description.

*aircraft on ground (AOG) spares* — may contain explosives (flares or other pyrotechnics), chemical oxygen generators, unserviceable tire assemblies, cylinders of compressed gas (oxygen, carbon dioxide or fire extinguishers), fuel in equipment, wet or lithium batteries, matches

*automobile parts (car, motor, motorcycle)* — may include engines, carburetors or fuel tanks that contain or have contained fuel, wet batteries, compressed gases in tire inflation devices and fire extinguishers, air bags, etc.

*breathing apparatus* — may indicate cylinders of compressed air or oxygen, chemical oxygen generators or refrigerated liquefied oxygen

*camping equipment* — may contain flammable gases (butane, propane, etc.), flammable liquids (kerosene, gasoline, etc.) or flammable solids (hexamine, matches, etc.)

*cars, car parts* — see automobile parts, etc.

*chemicals* — may contain items meeting any of the criteria for dangerous goods, particularly flammable liquids, flammable solids, oxidizers, organic peroxides, toxic or corrosive substances

*consolidated consignments (groupages)* — may contain any of the defined classes of dangerous goods

*cryogenic (liquid)* — indicates refrigerated liquefied gases such as argon, helium, neon, nitrogen, etc.

*cylinders* — may contain compressed or liquefied gas

*dental apparatus* — may contain flammable resins or solvents, compressed or liquefied gas, mercury and radioactive material

*diagnostic specimens* — may contain infectious substances

*diving equipment* — may contain cylinders of compressed gas (e.g. air or oxygen). May also contain high intensity diving lamps that can generate extreme heat when operated in air. In order to be carried safely, the bulb or battery should be disconnected

*drilling and mining equipment* — may contain explosive(s) and/or other dangerous goods

*dry shipper (vapour shipper)* — may contain free liquid nitrogen. Dry shippers are not subject to these Instructions only when they do not permit the release of any free liquid nitrogen irrespective of the orientation of the packaging

*electrical equipment* — may contain magnetized material, mercury in switch gear, electron tubes or wet batteries

*electrically powered apparatus (wheelchairs, lawnmowers, golf carts, etc.)* — may contain wet batteries

*expeditionary equipment* — may contain explosives (flares), flammable liquids (gasoline), flammable gas (gas for camping equipment) or other dangerous goods

*film crew and media equipment* — may contain explosive pyrotechnic devices, generators incorporating internal combustion engines, wet batteries, fuel, heat-producing items, etc.

*frozen embryos* — may be packed in refrigerated liquefied gas or dry ice

*frozen fruit, vegetables, etc.* — may be packed in dry ice (solid carbon dioxide)

*fuel control units* — may contain flammable liquids

*hot-air balloon* — may contain cylinders with flammable gas, fire extinguishers, engines internal combustion, batteries, etc.

*household goods* — may contain items meeting any of the criteria for dangerous goods. Examples include flammable liquids such as solvent-based paint, adhesives, polishes, aerosols (for passengers, those not permitted under 8;1.1.2), bleach, corrosive oven or drain cleaners, ammunition, matches, etc.

*instruments* — may conceal barometers, manometers, mercury switches, rectifier tubes, thermometers, etc., containing mercury

*laboratory/testing equipment* — may contain items meeting any of the criteria for dangerous goods, particularly flammable liquids, flammable solids, oxidizers, organic peroxides, toxic or corrosive substances

*machinery parts* — may contain flammable adhesives, paints, sealants and solvents, wet and lithium batteries, mercury, cylinders of compressed or liquefied gas, etc.

*magnets and other items of similar material* — may individually or cumulatively meet the definition of magnetized material (see 2;9.2.1)

*medical supplies* — may contain items meeting any of the criteria for dangerous goods, particularly flammable liquids, flammable solids, oxidizers, organic peroxides, toxic or corrosive substances

*metal construction material* — may contain ferromagnetic material which may be subject to special stowage requirements due to the possibility of affecting aircraft instruments (see 2;9.2.1)

*metal fencing* — may contain ferromagnetic material which may be subject to special stowage requirements due to the possibility of affecting aircraft instruments (see 2;9.2.1)

*metal piping* — may contain ferromagnetic material which may be subject to special stowage requirements due to the possibility of affecting aircraft instruments (see 2;9.2.1)

*passengers' baggage* — may contain items meeting any of the criteria for dangerous goods. Examples include fireworks, flammable household liquids, corrosive oven or drain cleaners, flammable gas or liquid lighter refills or camping stove cylinders, matches, ammunition, bleach, aerosols (not permitted under 8;1.1.2), etc.

*pharmaceuticals* — may contain items meeting any of the criteria for dangerous goods, particularly radioactive material, flammable liquids, flammable solids, oxidizers, organic peroxides, toxic or corrosive substances

*photographic supplies* — may contain items meeting any of the criteria for dangerous goods, particularly heat-producing devices, flammable liquids, flammable solids, oxidizers, organic peroxides, toxic or corrosive substances

*racing car or motorcycle team equipment* — may contain engines, carburetors or fuel tanks that contain fuel or residual fuel, wet batteries, flammable aerosols, nitromethane or other gasoline additives, cylinders of compressed gases, etc.

*refrigerators* — may contain liquefied gases or an ammonia solution

*repair kits* — may contain organic peroxides and flammable adhesives, solvent-based paints, resins, etc.

*samples for testing* — may contain items meeting any of the criteria for dangerous goods, particularly infectious substances, flammable liquids, flammable solids, oxidizers, organic peroxides, toxic or corrosive substances

*semen* — may be packed with dry ice or refrigerated liquefied gas (see also dry shipper)

*ships' spares* — may contain explosives (flares), cylinders of compressed gas (life rafts), paint, lithium batteries (emergency locator transmitters), etc.

*swimming pool chemicals* — may contain oxidizing or corrosive substances

*switches in electrical equipment or instruments* — may contain mercury

*tool boxes* — may contain explosives (power rivets), compressed gases or aerosols, flammable gases (Butane cylinders or torches), flammable adhesives or paints, corrosive liquids, etc.

*torches* — micro torches and utility lighters may contain flammable gas and be equipped with an electronic starter. Larger torches may consist of a torch head (often with a self-igniting switch) attached to a container or cylinder of flammable gas.

*unaccompanied passengers' baggage/personal effects* — may contain items meeting any of the criteria for dangerous goods. Examples include fireworks, flammable household liquids, corrosive oven or drain cleaners, flammable gas or liquid lighter refills or camping stove cylinders, matches, bleach, aerosols, etc.

*vaccines* — may be packed in dry ice (solid carbon dioxide).

---

**Part 8**

**PROVISIONS CONCERNING  
PASSENGERS AND CREW**

#

## Chapter 1

### PROVISIONS FOR DANGEROUS GOODS CARRIED BY PASSENGERS OR CREW

*Parts of this Chapter are affected by State Variations CH 1, US 15; see Table A-1*

#### 1.1 DANGEROUS GOODS CARRIED BY PASSENGERS OR CREW

1.1.1 Except as otherwise provided in 1.1.2, dangerous goods, including excepted packages of radioactive material, must not be carried by passengers or crew members, either as or in carry-on baggage or checked baggage or on their person. Security type equipment such as attaché cases, cash boxes, cash bags, etc., incorporating dangerous goods, for example lithium batteries or pyrotechnic material, are totally forbidden; see entry in Table 3-1. Personal medical oxygen devices that utilize liquid oxygen are prohibited either as or in carry-on baggage or checked baggage or on the person.

1.1.2 Notwithstanding any additional restrictions which may be implemented by States in the interests of aviation security, except for the incident reporting provisions of 7;4.4, the provisions of these Instructions do not apply to the following when carried by passengers or crew members or in baggage that has been separated from its owner during transit (e.g. lost baggage or improperly routed baggage):

##### *Medical necessities*

- a) with the approval of the operator(s), small gaseous oxygen or air cylinders required for medical use. Each cylinder must not exceed 5 kg gross mass. Cylinders, valves and regulators, where fitted, must be protected from damage which could cause inadvertent release of the contents;

*Note.— Devices containing liquid oxygen are forbidden as or in carry-on baggage, checked baggage or on the person.*

- b) cylinders of a gas of Division 2.2 worn for the operation of mechanical limbs, also spare cylinders of a similar size if required to ensure an adequate supply for the duration of the journey;
- c) non-radioactive medicinal articles (including aerosols). The total net quantity of each single article must not exceed 0.5 kg or 0.5 L. Release valves on aerosols must be protected by a cap or other suitable means to prevent inadvertent release of the contents.

The total net quantity of all articles mentioned in 1.1.2 c), h) and k) must not exceed 2 kg or 2 L (e.g. four aerosol cans of 500 mL each) for each person.

- d) radioisotopic cardiac pacemakers or other devices, including those powered by lithium batteries, implanted into a person, or radio-pharmaceuticals contained within the body of a person as the result of medical treatment;
- e) with the approval of the operator(s), wheelchairs or other battery-powered mobility aids with non-spillable batteries (see Packing Instruction 806 and Special Provision A67), as checked baggage provided the battery terminals are protected from short circuits and the battery is securely attached to the wheelchair or mobility aid;
- f) with the approval of the operator(s), wheelchairs or other battery-powered mobility aids with spillable batteries as checked baggage, provided that the wheelchair or mobility aid can be loaded, stowed, secured and unloaded always in an upright position and that the battery is disconnected, the battery terminals are protected from short circuits and the battery is securely attached to the wheelchair or mobility aid. If the wheelchair or mobility aid cannot be loaded, stowed, secured and unloaded always in an upright position, the battery must be removed and the wheelchair or mobility aid may then be carried as checked baggage without restriction. The removed battery must be carried in strong, rigid packagings as follows:
  - 1) these packagings must be leaktight, impervious to battery fluid and be protected against upset by securing them to pallets or by securing them in cargo compartments using appropriate means of securement (other than by bracing with freight or baggage) such as by use of restraining straps, brackets or holders;
  - 2) batteries must be protected against short circuits, secured upright in these packagings and surrounded by compatible absorbent material sufficient to absorb their total liquid contents; and
  - 3) these packagings must be marked "Battery, wet, with wheelchair" or "Battery, wet, with mobility aid" and be labelled with a "Corrosive" label (Figure 5-22) and with a package orientation label (Figure 5-26).

The pilot-in-command must be informed of the location of a wheelchair or mobility aid with an installed battery or the location of a packed battery.

It is recommended that passengers make advance arrangements with each operator; also unless batteries are non-spillable they should be fitted, where feasible, with spill-resistant vent caps;

- g) one small medical or clinical thermometer which contains mercury, for personal use, when in its protective case;

*Articles used in dressing or grooming*

- h) toiletry articles (including aerosols). The total net quantity of each single article must not exceed 0.5 kg or 0.5 L. Release valves on aerosols must be protected by a cap or other suitable means to prevent inadvertent release of the contents. The term "toiletry articles (including aerosols)" is intended to include such items as hair sprays, perfumes and colognes.

The total net quantity of all articles mentioned in 1.1.2 c), h) and k) must not exceed 2 kg or 2 L (e.g. four aerosol cans of 500 mL each) for each person.

- i) hair curlers containing hydrocarbon gas, no more than one per person, provided that the safety cover is securely fitted over the heating element. Gas refills for such curlers must not be carried;

*Consumer articles*

- j) when in retail packagings, alcoholic beverages containing more than 24 per cent but not more than 70 per cent alcohol by volume, in receptacles not exceeding 5 L, with a total net quantity per person of 5 L for such beverages.

*Note.— Alcoholic beverages containing not more than 24 per cent alcohol by volume are not subject to any restrictions.*

- k) Aerosols in Division 2.2, with no subsidiary risk, for sporting or home use is permitted in checked baggage only. The total net quantity of each single article must not exceed 0.5 kg or 0.5 L. Release valves on aerosols must be protected by a cap or other suitable means to prevent inadvertent release of the contents.

The total net quantity of all articles mentioned in 1.1.2 c), h) and k) must not exceed 2 kg or 2 L (e.g. four aerosol cans of 500 mL each) for each person.

- l) with the approval of the operator(s), as checked baggage only, securely packaged cartridges (UN 0012 or UN 0014 only), in Division 1.4S, in quantities not exceeding 5 kg gross mass per person for that person's own use, excluding ammunition with explosive or incendiary projectiles. Allowances for more than one person must not be combined into one or more packages;
- m) one small packet of safety matches or a cigarette lighter that does not contain unabsorbed liquid fuel (other than liquefied gas), intended for use by an individual when carried on the person. Matches and lighters are not permitted in checked or carry-on baggage. Lighter fuel and lighter refills are not permitted on one's person, in carry-on or checked baggage;

*Note.— "Strike anywhere" matches are forbidden for air transport.*

- n) with the approval of the operator(s), battery-powered equipment capable of generating extreme heat, which could cause a fire if activated (e.g. underwater high intensity lamps) providing that the heat producing component or the battery is packed separately so as to prevent activation during transport. Any battery which has been removed must be protected against short circuit;
- o) with the approval of the operator(s), one avalanche rescue backpack per person equipped with a pyrotechnic trigger mechanism containing not more than 200 mg net of Division 1.4S and a cylinder of compressed gas of Division 2.2 not exceeding 250 mL. The backpack must be packed in such a manner that it cannot be accidentally activated. The airbags within the backpack must be fitted with pressure relief valves;
- p) with the approval of the operator(s), no more than two small cylinders of carbon dioxide or another suitable gas in Division 2.2, per person, fitted into a self-inflating life-jacket for inflation purposes, plus no more than two spare cartridges;
- q) consumer electronic devices (watches, calculating machines, cameras, cellular phones, laptop computers, camcorders, etc.) containing lithium or lithium ion cells or batteries when carried by passengers or crew for personal use, which should be carried as carry-on baggage. Spare batteries must be individually protected so as to prevent short circuits (by placement in original retail packaging or by otherwise insulating terminals, e.g. by taping over exposed terminals or placing each battery in a separate plastic bag or protective pouch) and carried in carry-on baggage only. In addition, each installed or spare battery must not exceed the following:

- for lithium metal or lithium alloy batteries, a lithium content of not more than 2 grams; or
- for lithium ion batteries, a watt-hour rating of not more than 100 Wh.

With the approval of the operator, lithium ion batteries exceeding a watt-hour rating of 100 Wh but not exceeding 160 Wh may be carried as spare batteries in carry-on baggage or in equipment in either checked or carry-on baggage. No more than two individually protected spare batteries per person may be carried.

- r) fuel cell systems used to power portable electronic devices (for example cameras, cellular phones, laptop computers and camcorders) and spare fuel cartridges, under the following conditions:
- 1) fuel cell cartridges may only contain flammable liquids, corrosive substances, liquefied flammable gas, water reactive substances or hydrogen in metal hydride;
  - 2) fuel cell cartridges must not be refillable by the user. Refuelling of fuel cell systems is not permitted except that the installation of a spare cartridge is allowed. Fuel cell cartridges which are used to refill fuel cell systems but which are not designed or intended to remain installed (fuel cell refills) are not permitted to be carried;
  - 3) the maximum quantity of fuel in any fuel cell cartridge must not exceed:
    - a) for liquids 200 mL;
    - b) for solids 200 grams;
    - c) for liquefied gases, 120 mL for non-metallic fuel cell cartridges or 200 mL for metal fuel cell cartridges;

For hydrogen in metal hydride, the fuel cell cartridges must have a water capacity of 120 mL or less;

- 4) each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1, and must be marked with a manufacturer's certification that it conforms to the specification. In addition, each fuel cell cartridge must be marked with the maximum quantity and type of fuel in the cartridge;
  - 5) fuel cell cartridges containing hydrogen in metal hydride must comply with the requirements in Special Provision A162.
  - 6) no more than two spare fuel cell cartridges may be carried by a passenger;
  - 7) fuel cell systems containing fuel and fuel cell cartridges including spare cartridges are permitted in carry-on baggage only;
  - 8) interaction between fuel cells and integrated batteries in a device must conform to IEC PAS 62282-6-1 Ed. 1. Fuel cell systems whose sole function is to charge a battery in the device are not permitted;
  - 9) fuel cell systems must be of a type that will not charge batteries when the portable electronic device is not in use and must be durably marked by the manufacturer: "APPROVED FOR CARRIAGE IN AIRCRAFT CABIN ONLY" to so indicate; and
  - 10) in addition to the languages which may be required by the State of Origin for the markings specified above, English should be used.
- s) with the approval of the operator, dry ice in quantities not exceeding 2.5 kg per person, when used to pack perishables that are not subject to these Instructions, provided the package permits the release of carbon dioxide gas. When carried in checked baggage, each package must be marked:
- "DRY ICE" or "CARBON DIOXIDE, SOLID"; and
  - with the net weight of dry ice or an indication that the net weight is 2.5 kg or less;
- t) with the approval of the operator(s), as carry-on baggage only, a mercurial barometer or mercurial thermometer carried by a representative of a government weather bureau or similar official agency. The barometer or thermometer must be packed in a strong outer packaging, having a sealed inner liner or a bag of strong leakproof and puncture-resistant material impervious to mercury, which will prevent the escape of mercury from the package irrespective of its position. The pilot-in-command must be informed of the barometer or thermometer;
- u) with the approval of the operator(s), as carry-on or checked baggage, instruments containing radioactive material not exceeding the activity limits specified in Table 2-15 (i.e. chemical agent monitor (CAM) and/or rapid alarm and identification device monitor (RAID-M)), securely packed and without lithium batteries, when carried by staff members of the Organization for the Prohibition of Chemical Weapons (OPCW) on official travel.

1.1.3 Any organization or enterprise other than an operator (such as a travel agent), involved in the air transport of passengers, should provide passengers with information about the types of dangerous goods which they are forbidden to transport aboard an aircraft. This information should consist of, as a minimum, notices at those locations where there is an interface with the passengers.

**LISTS OF PROPER SHIPPING NAMES**

# Chapter 1

## LIST OF UN NUMBERS

### WITH ASSOCIATED PROPER SHIPPING NAMES

0004	<b>Ammonium picrate</b> dry or wetted with less than 10% water, by mass	0035	<b>Bombs</b> with bursting charge
0005	<b>Cartridges for weapons</b> with bursting charge	0037	<b>Bombs, photo-flash</b>
0006	<b>Cartridges for weapons</b> with bursting charge	0038	<b>Bombs, photo-flash</b>
0007	<b>Cartridges for weapons</b> with bursting charge	0039	<b>Bombs, photo-flash</b>
0009	<b>Ammunition, incendiary</b> with or without burster, expelling charge or propelling charge	0042	<b>Boosters</b> without detonator
0010	<b>Ammunition, incendiary</b> with or without burster, expelling charge or propelling charge	0043	<b>Bursters</b> , explosive
0012	<b>Cartridges for weapons, inert projectile</b> <i>or Cartridges, small arms</i>	0044	<b>Primers, cap type</b>
0014	<b>Cartridges for weapons, blank</b> <i>or Cartridges, small arms, blank</i>	0048	<b>Charges, demolition</b>
0015	<b>Ammunition, smoke</b> with or without burster, expelling charge or propelling charge	0049	<b>Cartridges, flash</b>
0016	<b>Ammunition, smoke</b> with or without burster, expelling charge or propelling charge	0050	<b>Cartridges, flash</b>
0018	<b>Ammunition, tear-producing</b> with burster, expelling charge or propelling charge	0054	<b>Cartridges, signal</b>
0019	<b>Ammunition, tear-producing</b> with burster, expelling charge or propelling charge	0055	<b>Cases, cartridge, empty, with primer</b>
0020	<b>Ammunition, toxic</b> with burster, expelling charge or propelling charge	0056	<b>Charges, depth</b>
0021	<b>Ammunition, toxic</b> with burster, expelling charge or propelling charge	0059	<b>Charges, shaped</b> without detonator
0027	<b>Black powder</b> , granular or as a meal <i>or Gunpowder</i> , granular or as a meal	0060	<b>Charges, supplementary, explosive</b>
0028	<b>Black powder, compressed</b> <i>or Black powder in pellets</i> <i>or Gunpowder, compressed</i> <i>or Gunpowder in pellets</i>	0065	<b>Cord, detonating</b> , flexible
0029	<b>Detonators, non-electric</b> for blasting	0066	<b>Cord, igniter</b>
0030	<b>Detonators, electric</b> for blasting	0070	<b>Cutters, cable, explosive</b>
0033	<b>Bombs</b> with bursting charge	0072	<b>Cyclonite, wetted</b> with not less than 15% water, by mass <i>or Cyclotrimethylenetrinitramine, wetted</i> with not less than 15% water, by mass <i>or Hexogen, wetted</i> with not less than 15% water, by mass <i>or RDX, wetted</i> with not less than 15% water, by mass
0034	<b>Bombs</b> with bursting charge	0073	<b>Detonators for ammunition</b>
		0074	<b>Diazodinitrophenol, wetted</b> with not less than 40% water, or mixture of alcohol and water, by mass
		0075	<b>Diethyleneglycol dinitrate, desensitized</b> with not less than 25% non-volatile, water-insoluble phlegmatizer, by mass
		0076	<b>Dinitrophenol</b> , dry or wetted with less than 15% water, by mass
		0077	<b>Dinitrophenolates</b> , alkali metals, dry or wetted with less than 15% water, by mass
		0078	<b>Dinitroresorcinol</b> , dry or wetted with less than 15% water, by mass

0079	<b>Dipicrylamine</b> <i>or Hexanitrodiphenylamine</i> <i>or Hexyl</i>	0135	<b>Mercury fulminate, wetted</b> with not less than 20% water, or mixture of alcohol and water, by mass
0081	<b>Explosive, blasting, type A</b>	0136	<b>Mines</b> with bursting charge
0082	<b>Explosive, blasting, type B</b>	0137	<b>Mines</b> with bursting charge
0083	<b>Explosive, blasting, type C</b>	0138	<b>Mines</b> with bursting charge
0084	<b>Explosive, blasting, type D</b>	0143	<b>Nitroglycerin, desensitized</b> with not less than 40% non-volatile water-insoluble phlegmatizer, by mass
0092	<b>Flares, surface</b>	0144	<b>Nitroglycerin solution in alcohol</b> with more than 1% but not more than 10% nitroglycerin
0093	<b>Flares, aerial</b>	0146	<b>Nitrostarch</b> , dry or wetted with less than 20% water, by mass
0094	<b>Flash powder</b>	0147	<b>Nitro urea</b>
0099	<b>Fracturing devices, explosive</b> , without detonator for oil wells	0150	<b>Pentaerythrite tetranitrate, desensitized</b> with not less than 15% phlegmatizer by mass <i>or Pentaerythrite tetranitrate, wetted</i> with not less than 25% water, by mass <i>or Pentaerythritol tetranitrate, desensitized</i> with not less than 15% phlegmatizer, by mass <i>or Pentaerythritol tetranitrate, wetted</i> with not less than 25% water, by mass <i>or PETN, desensitized</i> with not less than 15% phlegmatizer, by mass <i>or PETN, wetted</i> with not less than 25% water, by mass
0101	<b>Fuse, non-detonating</b>	0151	<b>Pentolite</b> , dry or wetted with less than 15% water, by mass
0102	<b>Cord, detonating</b> , metal clad <i>or Fuse, detonating</i> , metal clad	0153	<b>Picramide</b> <i>or Trinitroaniline</i>
0103	<b>Fuse, igniter</b> , tubular, metal clad	0154	<b>Picric acid</b> , dry or wetted with less than 30% water, by mass <i>or Trinitrophenol</i> , dry or wetted with less than 30% water, by mass
0104	<b>Cord, detonating, mild effect</b> , metal clad <i>or Fuse, detonating, mild effect</i> , metal clad	0155	<b>Picryl chloride</b> <i>or Trinitrochlorobenzene</i>
0105	<b>Fuse, safety</b>	0159	<b>Powder cake, wetted</b> with not less than 25% water, by mass <i>or Powder paste, wetted</i> with not less than 25% water, by mass
0106	<b>Fuzes, detonating</b>	0160	<b>Powder, smokeless</b>
0107	<b>Fuzes, detonating</b>	0161	<b>Powder, smokeless</b>
0110	<b>Grenades, practice</b> , hand or rifle	0167	<b>Projectiles</b> with bursting charge
0113	<b>Guanyl nitrosaminoguanylidene hydrazine, wetted</b> with not less than 30% water, by mass	0168	<b>Projectiles</b> with bursting charge
0114	<b>Guanyl nitrosaminoguanyltetrazene, wetted</b> with not less than 30% water, or mixture of alcohol and water, by mass <i>or Tetrazene, wetted</i> with not less than 30% water, or mixture of alcohol and water, by mass	0169	<b>Projectiles</b> with bursting charge
0118	<b>Hexolite</b> , dry or wetted with less than 15% water, by mass <i>or Hexotol</i> , dry or wetted with less than 15% water, by mass	0171	<b>Ammunition, illuminating</b> with or without burster, expelling charge or propelling charge
0121	<b>Igniters</b>	0173	<b>Release devices, explosive</b>
0124	<b>Jet perforating guns, charged</b> , oil well, without detonator	0174	<b>Rivets, explosive</b>
0129	<b>Lead azide, wetted</b> with not less than 20% water, or mixture of alcohol and water, by mass	0180	<b>Rockets</b> with bursting charge
0130	<b>Lead styphnate, wetted</b> with not less than 20% water, or mixture of alcohol and water, by mass <i>or Lead trinitroresorcinate, wetted</i> with not less than 20% water, or mixture of alcohol and water, by mass	0181	<b>Rockets</b> with bursting charge
0131	<b>Lighters, fuse</b>		
0132	<b>Deflagrating metal salts of aromatic nitro-derivatives, n.o.s.</b>		
0133	<b>Mannitol hexanitrate, wetted</b> with not less than 40% water, or mixture of alcohol and water, by mass <i>or Nitromannite, wetted</i> with not less than 40% water, or mixture of alcohol and water, by mass		

0182	<b>Rockets with bursting charge</b>	0235	<b>Sodium picramate</b> , dry or wetted with less than 20% water, by mass
0183	<b>Rockets with inert head</b>	0236	<b>Zirconium picramate</b> , dry or wetted with less than 20% water, by mass
0186	<b>Rocket motors</b>	0237	<b>Charges, shaped, flexible, linear</b>
0190	<b>Samples, explosive</b> , other than initiating explosives	0238	<b>Rockets, line-throwing</b>
0191	<b>Signal devices, hand</b>	0240	<b>Rockets, line-throwing</b>
0192	<b>Signals, railway track, explosive</b>	0241	<b>Explosive, blasting, type E</b>
0193	<b>Signals, railway track, explosive</b>	0242	<b>Charges, propelling, for cannon</b>
0194	<b>Signals, distress, ship</b>	0243	<b>Ammunition, incendiary, white phosphorus</b> with burster, expelling charge or propelling charge
0195	<b>Signals, distress, ship</b>	0244	<b>Ammunition, incendiary, white phosphorus</b> with burster, expelling charge or propelling charge

		3431	<b>Nitrobenzotrifluorides, solid</b>
		3432	<b>Polychlorinated biphenyls, solid</b>
		3434	<b>Nitrocresols, liquid</b>
		3436	<b>Hexafluoroacetone hydrate, solid</b>
		3437	<b>Chlorocresols, solid</b>
		3438	<b>alpha-Methylbenzyl alcohol, solid</b>
		3439	<b>Nitriles, toxic, solid, n.o.s.</b>
		3440	<b>Selenium compound, liquid, n.o.s.</b>
		3441	<b>Chlorodinitrobenzenes, solid</b>

3442	<b>Dichloroanilines, solid</b>	<i>or Fuel cell cartridges packed with equipment, containing flammable liquids</i>
3443	<b>Dinitrobenzenes, solid</b>	
3444	<b>Nicotine hydrochloride, solid</b>	3474 <b>1-Hydroxybenzotriazole, anhydrous, wetted</b> with not less than 20% water, by mass
3445	<b>Nicotine sulphate, solid</b>	3475 <b>Ethanol and gasoline mixture</b> , with more than 10% ethanol
3446	<b>Nitrotoluenes, solid</b>	<i>or Ethanol and motor spirit mixture</i> , with more than 10% ethanol
3447	<b>Nitroxylenes, solid</b>	<i>or Ethanol and petrol mixture</i> , with more than 10% ethanol
3448	<b>Tear gas substance, solid, n.o.s.</b>	
3449	<b>Bromobenzyl cyanides, solid</b>	
3450	<b>Diphenylchloroarsine, solid</b>	
3451	<b>Toluidines, solid</b>	3476 <b>Fuel cell cartridges</b> , containing water-reactive substances
3452	<b>Xylidines, solid</b>	<i>or Fuel cell cartridges contained in equipment</i> , containing water-reactive substances
3453	<b>Phosphoric acid, solid</b>	<i>or Fuel cell cartridges packed with equipment</i> , containing water-reactive substances
3454	<b>Dinitrotoluenes, solid</b>	
3455	<b>Cresols, solid</b>	3477 <b>Fuel cell cartridges</b> , containing corrosive substances
3456	<b>Nitrosylsulphuric acid, solid</b>	<i>or Fuel cell cartridges contained in equipment</i> , containing corrosive substances
3457	<b>Chloronitrotoluenes, solid</b>	<i>or Fuel cell cartridges packed with equipment</i> , containing corrosive substances
3458	<b>Nitroanisoles, solid</b>	
3459	<b>Nitrobromobenzene, solid</b>	
3460	<b>N-Ethylbenzyltoluidines, solid</b>	3478 <b>Fuel cell cartridges</b> , containing liquefied flammable gas
3462	<b>Toxins, extracted from living sources, solid, n.o.s.</b>	<i>or Fuel cell cartridges contained in equipment</i> , containing liquefied flammable gas
3463	<b>Propionic acid</b> with not less than 90% acid by mass	<i>or Fuel cell cartridges packed with equipment</i> , containing liquefied flammable gas
3464	<b>Organophosphorus compound, toxic, solid, n.o.s.</b>	
3465	<b>Organoarsenic compound, solid, n.o.s.</b>	3479 <b>Fuel cell cartridges</b> , containing hydrogen in metal hydride
3466	<b>Metal carbonyls, solid, n.o.s.</b>	<i>or Fuel cell cartridges contained in equipment</i> , containing hydrogen in metal hydride
3467	<b>Organometallic compound, toxic, solid, n.o.s.</b>	<i>or Fuel cell cartridges packed with equipment</i> , containing hydrogen in metal hydride
3468	<b>Hydrogen in a metal hydride storage system</b> <i>or Hydrogen in a metal hydride storage system contained in equipment</i> <i>or Hydrogen in a metal hydride storage system packed with equipment</i>	3480 <b>Lithium ion batteries</b> (including lithium ion polymer batteries)
3469	<b>Paint, flammable, corrosive</b> (including paint, lacquer, enamel, stain, shellac, varnish, polish, liquid filler and liquid lacquer base) <i>or Paint related material, flammable, corrosive</i> (including paint thinning or reducing compound)	3481 <b>Lithium ion batteries contained in equipment</b> (including lithium ion polymer batteries) <i>or Lithium ion batteries packed with equipment</i> (including lithium ion polymer batteries)
3470	<b>Paint, corrosive, flammable</b> (including paint, lacquer, enamel, stain, shellac, varnish, polish, liquid filler and liquid lacquer base) <i>or Paint related material corrosive, flammable</i> (including paint thinning or reducing compound)	8000 <b>Consumer commodity</b>
3471	<b>Hydrogendifluorides, solution, n.o.s.</b>	
3472	<b>Crotonic acid, liquid</b>	
3473	<b>Fuel cell cartridges</b> , containing flammable liquids <i>or Fuel cell cartridges contained in equipment</i> , containing flammable liquids	

## Chapter 2

### LIST OF N.O.S. AND GENERIC PROPER SHIPPING NAMES

Substances or articles not mentioned specifically by name in Table 3-1 must be classified in accordance with 3;1.2.7. Thus the name in Table 3-1 which most appropriately describes the substance or article should be used as the proper shipping name.

In the list that follows, all the n.o.s. entries and the main generic entries from Table 3-1 are shown, grouped by hazard class or division. Within each hazard class or division the names are placed into three groups, where appropriate, as follows:

- specific entries covering a group of substances or articles of a particular chemical or technical nature;
- pesticide entries, for Class 3 and Division 6.1;
- general entries covering a group of substances or articles having one or more general dangerous properties.

An asterisk following a name indicates that the technical name must be added, see 3;1.2.7.

#### THE MOST SPECIFIC APPLICABLE NAME MUST ALWAYS BE USED

<i>Class or Division</i>	<i>Subsidiary risk</i>	<i>UN No.</i>	<i>Proper shipping name</i>

# **GLOSSARY OF TERMS**

**Caution:** These explanations are only for information. They must not be relied upon for purposes of hazard classification and may not necessarily reflect the information provided to the United Nations at the time the UN numbers were assigned.

## Glossary of terms

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>AIR BAG INFLATORS, PYROTECHNIC or AIR BAG MODULES, PYROTECHNIC or SEAT-BELT PRETENSIONERS, PYROTECHNIC.</b> Articles which contain pyrotechnical substances and are used as life-saving vehicle airbags or seat-belts.	0503, 3268
<b>AIRCRAFT ENGINES.</b> Generic term for engines powering flying craft fuelled by flammable liquid (jet-fuel, petrol, kerosene, etc.) which applies to piston designs, turbine designs and includes auxiliary power units (APU).	3166
<b>ALUMINIUM PROCESSING BY-PRODUCTS.</b> The material, consisting of skimmings of virgin aluminium, rising to the surface of impure molten aluminium metal.	3170
<b>ALUMINIUM POWDER.</b> The uncoated powder may evolve hydrogen in contact with water, and finely divided dust may be ignited by naked lights or sparks. Coated aluminium powders which have been treated with oils or wax for printing or paint purposes are generally not dangerous.	1309, 1396
<b>AMMUNITION.</b> Generic term related mainly to articles of military application consisting of all kinds of bombs, grenades, rockets, mines, projectiles and other similar devices or contrivances.	—
<b>AMMUNITION, ILLUMINATING with or without burster, expelling charge or propelling charge.</b> Ammunition designed to produce a single source of intense light for lighting up an area. The term includes illuminating cartridges, grenades and projectiles; and illuminating and target identification bombs. The term excludes the following articles which are listed separately: CARTRIDGES, SIGNAL; SIGNAL DEVICES, HAND; SIGNALS, DISTRESS; FLARES, AERIAL; and FLARES, SURFACE.	0171, 0254, 0297
<b>AMMUNITION, INCENDIARY.</b> Ammunition containing incendiary substance which may be a solid, liquid or gel including white phosphorus. Except when the composition is an explosive per se, it also contains one or more of the following: a propelling charge with primer and igniter charge; a fuze with burster or expelling charge. The term includes: AMMUNITION, INCENDIARY, liquid or gel, with burster, expelling charge or propelling charge; AMMUNITION, INCENDIARY, with or without burster, expelling charge or propelling charge; AMMUNITION, INCENDIARY, WHITE PHOSPHORUS, with burster, expelling charge or propelling charge.	0009, 0010, 0243, 0244, 0247, 0300
<b>AMMUNITION, PRACTICE.</b> Ammunition without a main bursting charge, containing a burster or expelling charge. Normally it also contains a fuze and a propelling charge. The term excludes the following articles which are listed separately: GRENADES, PRACTICE.	0362, 0488
<b>AMMUNITION, PROOF.</b> Ammunition containing pyrotechnic substance used to test the performance or strength of new ammunition, weapon components or assemblies.	0363
<b>AMMUNITION, SMOKE.</b> Ammunition containing smoke-producing substance such as chlorosulphonic acid mixture, titanium tetrachloride or white phosphorus; or smoke-producing pyrotechnic composition based on hexachloroethane or red phosphorus. Except when the substance is an explosive per se, the ammunition also contains one or more of the following: a propelling charge with primer and igniter charge; a fuze with burster or expelling charge. The term includes 'grenades, smoke' but excludes SIGNALS, SMOKE which are listed separately. The term includes: AMMUNITION, SMOKE, with or without burster, expelling charge or propelling charge; AMMUNITION, SMOKE, WHITE PHOSPHORUS, with burster, expelling charge or propelling charge.	0015, 0016, 0245, 0246, 0303
<b>AMMUNITION, TEAR-PRODUCING with burster, expelling charge or propelling charge.</b> Ammunition containing tear-producing substance. It also contains one or more of the following: a pyrotechnic substance; a propelling charge with primer and igniter charge; a fuze with burster or expelling charge.	0018, 0019, 0301
<b>AMMUNITION, TOXIC, with burster, expelling charge or propelling charge.</b> Ammunition containing toxic agent. It also contains one or more of the following: a pyrotechnic substance; a propelling charge with primer and igniter charge; a fuze with burster or expelling charge.	0020, 0021
<b>ARSENICAL DUST.</b> Smelter dust which contains large proportions of arsenic. These dusts are hazardous due to their toxic characteristics.	1562

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>ARTICLES, EXPLOSIVE, EXTREMELY INSENSITIVE (ARTICLES, EEI).</b> Articles that contain only extremely insensitive detonating substances and which demonstrate a negligible probability of accidental initiation or propagation (under normal conditions of transport).	0486
<i>Note.— An extremely insensitive detonating substance is a substance which although capable of sustaining a detonation has demonstrated through tests that it is so insensitive that there is very little probability of accidental initiation.</i>	
<b>ARTICLES, PYROPHORIC.</b> Articles which contain a pyrophoric substance capable of spontaneous ignition when exposed to air and an explosive substance or component. The term excludes articles containing white phosphorus.	0380
<b>ARTICLES, PYROTECHNIC for technical purposes.</b> Articles which contain pyrotechnic substances and are used for technical purposes such as heat generation, gas generation, theatrical effects, etc. The term excludes the following articles which are listed separately: all ammunition; CARTRIDGES, SIGNAL; CUTTERS, CABLE, EXPLOSIVE; FIREWORKS; FLARES, AERIAL; FLARES, SURFACE; RELEASE DEVICES, EXPLOSIVE; RIVETS, EXPLOSIVE; SIGNAL DEVICES, HAND; SIGNALS, DISTRESS; SIGNALS, RAILWAY TRACK, EXPLOSIVE; SIGNALS, SMOKE.	0428, 0429, 0430, 0431, 0432
<b>ASBESTOS.</b> Asbestos is a generic name for naturally occurring mineral silicate fibres of the Serpentine and Amphibole series. In the Serpentine series is Chrysotile, commonly known as white asbestos. In the Amphibole series are Actinolite, Amosite or Mysorite (commonly known as brown asbestos), Anthophyllite, Crocidolite (commonly known as blue asbestos) and Tremolite. All types of asbestos can be hazardous to health, blue and brown asbestos being the more dangerous types.	2212, 2590
<b>BATTERIES, CONTAINING SODIUM.</b> Articles consisting of a series of CELLS, CONTAINING SODIUM that are secured within, and fully enclosed by a metal casing so constructed and closed as to prevent the release of dangerous goods under normal conditions of transport. Although designed and intended to provide a source of electrical energy, these batteries are electrically inert at any temperature at which the sodium contained in the battery is in a solid state.	3292
<b>BATTERIES, DRY, CONTAINING POTASSIUM HYDROXIDE, SOLID.</b> Storage batteries filled with potassium hydroxide, solid which are shipped from the factory in their original dry state and filled with the dry alkali. Water would be added to the battery before first being used.	3028
<b>BATTERIES, WET, FILLED WITH ACID OR ALKALI.</b> A series of metal plates immersed in an electrolyte, which is usually dilute sulphuric acid, but for a certain type of battery the electrolyte is a solution of potassium hydroxide. Both of these electrolytes are corrosive liquids. The casing for the acid containing batteries is commonly plastic. Storage batteries of either of these types, when containing electrolyte, are classed as corrosive liquids. Storage batteries in transit may cause damage by leakage of the electrolyte or may produce fire by accidental short-circuiting of the terminals.	2794, 2795
<b>BLACK POWDER (GUNPOWDER).</b> Substance consisting of an intimate mixture of charcoal or other carbon and either potassium nitrate or sodium nitrate, with or without sulphur. It may be meal, granular, compressed or pelletized.	0027, 0028
<b>BOMBS.</b> Explosive articles which are dropped from aircraft. They may contain a flammable liquid with bursting charge, a photo-flash composition or a bursting charge. The term excludes torpedoes (aerial) and includes: BOMBS, PHOTO-FLASH; BOMBS with bursting charge; BOMBS WITH FLAMMABLE LIQUID, with bursting charge.	0033, 0034, 0035, 0037, 0038, 0039, 0291, 0299, 0399, 0400
<b>BOOSTERS.</b> Articles consisting of a charge of detonating explosive with or without means of initiation. They are used to increase the initiating power of detonators or detonating cord.	0042, 0225, 0268, 0283
<b>BURSTERS, explosive.</b> Articles consisting of a small charge of explosive used to open projectiles, or other ammunition in order to disperse their contents.	0043
<b>CAPS, TOY (AMORCES).</b> Articles consisting of a small quantity of an explosive substance between two strips or discs of paper or contained in a plastic cup or covered by varnishing or other means.	—
<b>CARTRIDGES ACTUATING FOR FIRE EXTINGUISHER.</b> Contrivances containing a small explosive charge with a primer, the functioning of which ruptures a metal piece (for example, a bursting disc) and thereby actuates a fire extinguisher.	—
<b>CARTRIDGES, BLANK.</b> Articles which consist of a cartridge case with a centre or rim fire primer and a confined charge of smokeless or black powder but no projectile. Used for training, saluting or in starter pistols, etc.	0014, 0326, 0327, 0338, 0413
<b>CARTRIDGES, FLASH.</b> Articles consisting of a casing, a primer and flash powder, all assembled in one piece ready for firing.	0049, 0050

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>CARTRIDGES FOR WEAPONS.</b>	0005, 0006, 0007, 0014, 0321, 0326, 0327, 0338, 0348, 0412, 0413
1) Fixed (assembled) or semi-fixed (partially-assembled) ammunition designed to be fired from weapons. Each cartridge includes all the components necessary to function the weapon once. The name and description should be used for small arms cartridges that cannot be described as 'cartridges, small arms'. Separate loading ammunition is included under this name and description when the propelling charge and projectile are packed together (see also 'Cartridges, blank').	
2) Incendiary, smoke, toxic and tear-producing cartridges are described in this Attachment under 'ammunition, incendiary' etc.	
<b>CARTRIDGES FOR WEAPONS, INERT PROJECTILE.</b> Ammunition consisting of a projectile without bursting charge but with a propelling charge. The presence of a tracer can be disregarded for classification purposes provided that the predominant hazard is that of the propelling charge.	0012, 0328, 0339, 0417
<b>CARTRIDGES, OIL WELL.</b> Articles consisting of a casing of thin fibre, metal or other material containing only propellant which projects a hardened projectile. The term excludes the following articles which are listed separately: CHARGES, SHAPED.	0277, 0278
<b>CARTRIDGES, POWER DEVICE.</b> Articles designed to accomplish mechanical actions. They consist of a casing with a charge of deflagrating explosive and a means of ignition. The gaseous products of the deflagration produce inflation, linear or rotary motion or activate diaphragms, valves or switches or project fastening devices or extinguishing agents.	0275, 0276, 0323, 0381
<b>CARTRIDGES, SIGNAL.</b> Articles designed to fire coloured flares or other signals from signal pistols, etc.	0054, 0312, 0405
<b>CARTRIDGES, SMALL ARMS.</b> Ammunition consisting of a cartridge case fitted with a centre or rim fire primer and containing both a propelling charge and solid projectile(s). They are designed to be fired in weapons of calibre not larger than 19.1 mm. Shot-gun cartridges of any calibre are included in this definition. The term excludes: CARTRIDGES, SMALL ARMS, BLANK listed separately; and some small arms cartridges which are listed under CARTRIDGES FOR WEAPONS, INERT PROJECTILE.	0012, 0328, 0339, 0417
<b>CASES, CARTRIDGE, EMPTY, WITH PRIMER.</b> Articles consisting of a cartridge case made from metal, plastics or other non-flammable material, in which the only explosive component is the primer.	0055, 0379
<b>CASES, COMBUSTIBLE, EMPTY, WITHOUT PRIMER.</b> Articles consisting of cartridge cases made partly or entirely from nitrocellulose.	0446, 0447
<b>CELLS, CONTAINING SODIUM.</b> Articles consisting of hermetically sealed, metal casings which fully enclose the dangerous goods and which are so constructed and closed as to prevent the release of the dangerous goods under normal conditions of transport. In addition to sodium, cells covered by this entry may also contain sulphur, but no other dangerous goods. Although designed and intended to provide a source of electrical energy, these cells are electrically inert at any temperature at which the sodium contained in the cell is in a solid state.	3292
<b>CHARGES, BURSTING.</b> Articles consisting of a charge of detonating explosive such as hexolite, octolite or plastics bonded explosive designed to produce effect by blast or fragmentation.	—
<b>CHARGES, DEMOLITION.</b> Articles containing a charge of a detonating explosive in a casing of fibre-board, plastic, metal or other material. The term excludes the following articles which are listed separately: bombs, mines, etc.	0048
<b>CHARGES, DEPTH.</b> Articles consisting of a charge of detonating explosive contained in a drum or projectile. They are designed to detonate under water.	0056
<b>CHARGES, EXPELLING.</b> A charge of deflagrating explosive designed to eject the payload from the parent articles without damage.	—
<b>CHARGES, EXPLOSIVE, COMMERCIAL without detonator.</b> Articles consisting of a charge of detonating explosive without means of initiation, used for explosive welding, jointing, forming and other metallurgical processes.	0442, 0443, 0444, 0445
<b>CHARGES, PROPELLING.</b> Articles consisting of a propellant charge in any physical form, with or without a casing, for use as a component of rocket motors or for reducing the drag of projectiles.	0271, 0272, 0415, 0491
<b>CHARGES, PROPELLING FOR CANNON.</b> Articles consisting of a propellant charge in any physical form, with or without a casing, for use in a cannon.	0242, 0279, 0414
<b>CHARGES, SHAPED, without detonator.</b> Articles consisting of a casing containing a charge of detonating explosive with a cavity lined with rigid material, without means of initiation. They are designed to produce a powerful, penetrating jet effect.	0059, 0439, 0440, 0441

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>CHARGES, SHAPED, FLEXIBLE, LINEAR.</b> Articles consisting of a V-shaped core of a detonating explosive clad by a flexible metal sheath.	0237, 0288
<b>CHARGES, SUPPLEMENTARY, EXPLOSIVE.</b> Articles consisting of a small removable booster used in the cavity of a projectile between the fuze and the bursting charge.	0060
<b>COAL GAS COMPRESSED.</b> The gas obtained by the destructive distillation of bituminous coal.	1023
<b>COATING SOLUTION.</b> Material such as automobile undercoating, drum or barrel lining material, etc., which cannot properly be described as cement, but presents similar hazards during transport. It usually contains flammable solvents.	1139
<b>COMPONENTS, EXPLOSIVE TRAIN, N.O.S.</b> Articles containing an explosive designed to transmit the detonation or deflagration within an explosive train.	0382, 0383, 0384, 0461
<b>CONSUMER COMMODITY.</b> A material which is packed and distributed in a form intended or suitable for retail sales for the purposes of personal care or household use.	—
<b>CONTRIVANCES, WATER-ACTIVATED with burster, expelling charge or propelling charge.</b> Articles whose functioning depends upon physico-chemical reaction of their contents with water.	0248, 0249
<b>COPRA.</b> The dried meat of coconuts used to produce coconut oil. Copra contains up to 67% oil and may be subject to spontaneous combustion.	1363
<b>CORD, DETONATING, flexible.</b> Articles consisting of a core of detonating explosive enclosed in spun fabric with plastic or other covering unless the spun fabric is siftproof.	0065, 0289
<b>CORD (FUSE), DETONATING, metal clad.</b> Articles consisting of a core of detonating explosive clad by a soft metal tube with or without protective covering. When the core contains a sufficiently small quantity of explosive, the words 'mild effect' are added.	0102, 0104, 0290
<b>CORD, IGNITER.</b> Article consisting of textile yarns covered with black powder or another fast burning pyrotechnic composition and of a flexible protective covering; or it consists of a core of black powder surrounded by a flexible woven fabric. It burns progressively along its length with an external flame and is used to transmit ignition from a device to a charge or primer.	0066
<b>CUTTERS, CABLE, EXPLOSIVE.</b> Articles consisting of a knife-edged device which is driven by a small charge of deflagrating explosive into an anvil.	0070
<b>DETONATOR ASSEMBLIES, NON-ELECTRIC, for blasting.</b> Non-electric detonators assembled with and activated by such means as safety fuse, shock tube, flash tube or detonating cord. They may be of instantaneous design or incorporate delay elements. Detonating relays incorporating detonating cord are included. Other detonating relays are included in 'Detonators, non-electric'.	0360, 0361
<b>DETONATORS.</b> Articles consisting of a small metal or plastic tube containing explosives such as lead azide, PETN or combinations of explosives. They are designed to start a detonation train. They may be constructed to detonate instantaneously, or may contain a delay element. The term includes: DETONATORS FOR AMMUNITION and Detonators for blasting both electric and non-electric; Detonating relays without flexible detonating cord are included.	0029, 0030, 0073, 0255, 0267, 0364, 0365, 0366, 0455, 0456
<b>DRESSING, LEATHER.</b> A preparation which usually contains a solvent or other liquid with a low flash point.	—
<b>DYE INTERMEDIATE, N.O.S.</b> A cyclic compound, containing an amino, hydroxy, sulfonic acid, or quinone group or a combination of these groups used in the manufacture of dyes.	1602, 2801
<b>ELECTROLYTE.</b> The term commonly applied to the dilute sulphuric acid used in ordinary lead plate storage batteries. The solution of potassium hydroxide used in some storage batteries is also called electrolyte.	—
<b>ENTIRE LOAD.</b> Such a substantial proportion that the practical hazard should be assessed by assuming simultaneous explosion of the whole of the explosive content of the load or package.	—
<b>EXPLODE.</b> The verb used to indicate those explosive effects capable of endangering life and property through blast, heat and projection of missiles. It encompasses both deflagration and detonation.	—
<b>EXPLOSION OF THE TOTAL CONTENTS.</b> The phrase is used in testing a single article or package or a small stack of articles or packages.	—
<b>EXPLOSIVE, BLASTING.</b> Detonating explosive substances used in mining, construction and similar tasks. Blasting explosives are assigned to one of five types. In addition to the ingredients listed, blasting explosives may also contain inert components such as kieselguhr, and minor ingredients such as colouring agents and stabilizers.	0081, 0082, 0083, 0084, 0241, 0331, 0332

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>EXPLOSIVE, BLASTING, TYPE A.</b> Substances consisting of liquid organic nitrates such as nitroglycerin or a mixture of such ingredients with one or more of the following: nitrocellulose, ammonium nitrate or other inorganic nitrates, aromatic nitro derivatives or combustible materials such as wood-meal and aluminium powder. Such explosives must be in powdery, gelatinous or elastic form. The term includes dynamite, gelatine, blasting and gelatine dynamites.	0081
<b>EXPLOSIVE, BLASTING, TYPE B.</b> Substances consisting of a) a mixture of ammonium nitrate or other inorganic nitrates with an explosive such as trinitrotoluene, with or without other substances such as wood-meal and aluminium powder, or b) a mixture of ammonium nitrate or other inorganic nitrates with other combustible substances which are not explosive ingredients. Such explosives must not contain nitroglycerin, similar liquid organic nitrates, or chlorates.	0082, 0331
<b>EXPLOSIVE, BLASTING, TYPE C.</b> Substances consisting of a mixture of either potassium or sodium chlorate or potassium, sodium or ammonium perchlorate with organic nitro derivatives or combustible materials such as wood-meal or aluminium powder or a hydrocarbon. Such explosives must not contain nitroglycerin or similar liquid organic nitrates.	0083
<b>EXPLOSIVE, BLASTING, TYPE D.</b> Substances consisting of a mixture of organic nitrated compounds and combustible materials such as hydrocarbons and aluminium powder. Such explosives must not contain nitroglycerin, similar liquid organic nitrates, chlorates or ammonium nitrate. The term generally includes plastic explosives.	0084
<b>EXPLOSIVE, BLASTING, TYPE E.</b> Substances consisting of water as an essential ingredient and high proportions of ammonium nitrate or other oxidizers, some or all of which are in solution. The other constituents may include nitro-derivatives such as trinitrotoluene, hydrocarbons or aluminium powder. The term includes explosives, emulsion; explosives, slurry and explosives, water gel.	0241, 0332
<b>EXPLOSIVE, DEFLAGRATING.</b> A substance, e.g. a propellant, which reacts by deflagration rather than detonation when ignited and used in its normal manner.	—
<b>EXPLOSIVE, DETONATING.</b> A substance which reacts by detonation rather than deflagration when initiated and used in its normal manner.	—
<b>EXPLOSIVE, EXTREMELY INSENSITIVE DETONATING SUBSTANCE (EIDS).</b> A substance which, although capable of sustaining a detonation, has demonstrated through tests that it is so insensitive that there is very little probability of accidental initiation.	—
<b>EXPLOSIVE, PRIMARY.</b> An explosive substance manufactured with a view to producing a practical effect by explosion which is very sensitive to heat, impact or friction and which, even in very small quantities, either detonates or burns very rapidly. It is able to transmit detonation (in the case of initiating explosive) or deflagration to secondary explosives close to it. The main primary explosives are mercury fulminate, lead azide and lead styphnate.	—
<b>EXPLOSIVE, SECONDARY.</b> An explosive substance which is relatively insensitive (when compared to primary explosives), which is usually initiated by primary explosives with or without the aid of boosters or supplementary charges. Such an explosive may react as a deflagrating or as a detonating explosive.	—
<b>EXTRACTS, AROMATIC OR EXTRACTS, FLAVOURING.</b> Substances used for fragrances or for flavouring foods or beverages. Where they contain a solvent or other liquid with a sufficiently low flash point they are classified as flammable liquids. However, where they contain a liquid which has corrosive or toxic properties they must be classified according to that criteria. They may have obnoxious properties such that in the event of a leakage from the package they may cause extreme discomfort to the crew or passengers.	1169, 1197
<b>FILMS, NITROCELLULOSE BASE.</b> A type of film which consists mainly of nitrocellulose. As such the material has a low ignition temperature and burns rapidly when ignited, evolving gases which are toxic. When new and in good condition the film is reasonably stable and free from liability to spontaneous heating and combustion. Film that has deteriorated badly becomes very unstable and may be liable to spontaneous heating unless kept under water.	1324
<b>FIRE EXTINGUISHER CHARGES.</b> These commonly consist of packages containing sodium bicarbonate (a dry powder) which is non-hazardous, and bottles containing concentrated sulphuric acid, a corrosive liquid.	1774
<b>FIRELIGHTERS.</b> These are usually made from peat, wood shavings, or sawdust and a flammable liquid.	2623
<b>FIREWORKS.</b> Pyrotechnic articles designed for entertainment.	0333, 0334, 0335 0336, 0337

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>FLARES.</b> Articles containing pyrotechnic substances which are designed for use to illuminate, identify, signal or warn. The term includes: FLARES, AERIAL; FLARES, SURFACE.	0092, 0093, 0403, 0404, 0418, 0419, 0420, 0421
<b>FLASH POWDER.</b> Pyrotechnic substance which, when ignited, produces an intense light.	0094, 0305
<b>FRACTURING DEVICES, EXPLOSIVE, for oil wells, without detonator.</b> Articles consisting of a charge of detonating explosive contained in a casing without means of initiation. They are used to fracture the rock around a drill shaft to assist the flow of crude oil from the rock.	0099
<b>FUSE/FUZE.</b> Although these two words have a common origin (French <i>fusée, fusil</i> ) and are sometimes considered to be different spellings of the same word, it is useful to maintain the convention that FUSE refers to a cord-like igniting device whereas FUZE refers to a device used in ammunition which incorporates mechanical, electrical, chemical or hydrostatic components to initiate a train by deflagration or detonation.	—
<b>FUSE, IGNITER, tubular, metal clad.</b> Article consisting of a metal tube with a core of deflagrating explosive.	0103
<b>FUSE, INSTANTANEOUS, NON-DETONATING (QUICKMATCH).</b> Article consisting of cotton yarns impregnated with fine black powder (quickmatch). It burns with an external flame and is used in ignition trains for fireworks, etc.	0101
<b>FUSE, SAFETY.</b> Article consisting of a core of fine-grained black powder surrounded by a flexible woven fabric with one or more protective outer coverings. When ignited it burns at a predetermined rate without any external explosive effect.	0105
<b>FUZES.</b> Articles designed to start a detonation or a deflagration in ammunition. They incorporate mechanical, electrical, chemical or hydrostatic components and generally protective features. The term includes: FUZES, DETONATING; FUZES, DETONATING with protective features; FUZES, IGNITING.	0106, 0107, 0257, 0316, 0317, 0367, 0368, 0408, 0409, 0410
<b>GALLIUM.</b> A silvery-white metal with a melting point of 30°C; it may be under-cooled to almost 0°C without solidifying. It has the property of very rapidly penetrating the grain boundaries of aluminium alloys and other metals and causing embrittlement.	2803
<b>GAS DRIPS, Hydrocarbon.</b> The liquid that condenses on compression of Pintsch Gas or the condensate from gas mains. It consists principally of a mixture of benzene and unsaturated hydrocarbons.	3295
<b>GRENADES, hand or rifle.</b> Articles which are designed to be thrown by hand or to be projected by a rifle. The term includes: GRENADES, hand or rifle, with bursting charge; GRENADES, PRACTICE, hand or rifle. The term excludes 'grenades, smoke' which are listed under AMMUNITION, SMOKE.	0110, 0284, 0285, 0292, 0293, 0318, 0372, 0452
<b>HYDROCARBON GAS, COMPRESSED.</b> Hydrocarbon gas under high pressure, but not in the liquid condition.	1964
<b>HYDROCARBON GAS, LIQUEFIED.</b> Hydrocarbon gas from natural gas or from distillation of petroleum which are liquefied by pressure.	1965
<b>HYPOCHLORITE SOLUTION.</b> Water solutions containing a soluble hypochlorite varying over a wide range in concentration. The solutions are alkaline and corrosive but are not flammable. If the hypochlorite solution contacts strong acids, a decomposition takes place to produce the noxious chlorine-type gases.	1791
<b>IGNITERS.</b> Articles containing one or more explosive substances used to start deflagration in an explosive train. They may be actuated chemically, electrically or mechanically. This term excludes the following articles which are listed separately: CORD, IGNITER; FUSE, IGNITER; FUSE, INSTANTANEOUS, NON-DETONATING; FUZES, IGNITING; LIGHTERS, FUSE; PRIMERS, CAP TYPE; PRIMERS, TUBULAR.	0121, 0314, 0315, 0325, 0454
<b>IGNITION, MEANS OF.</b> A general term used in connection with the method employed to ignite a deflagrating train of explosive or pyrotechnic substances (e.g. a primer for a propelling charge, an igniter for a rocket motor, an igniting fuze).	—

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>INITIATION, MEANS OF.</b> (1) A device intended to cause the detonation of an explosive (e.g. detonator, detonator for ammunition, detonating fuze). (2) The term "with its own means of initiation" means that the contrivance has its normal initiating device assembled to it and this device is considered to present a significant risk during transport but not one great enough to be unacceptable. The term does not apply, however, to a contrivance packed together with its means of initiation provided the device is packaged so as to eliminate the risk of causing detonation of the contrivance in the event of accidental functioning of the initiating device. The means of initiating can even be assembled to the contrivance provided there are protective features such that the device is unlikely to cause detonation of the contrivance in conditions which are associated with transport. (3) For the purposes of classification any means of initiation without two effective protective features should be regarded as Compatibility Group B; an article with its own means of initiation, without two effective protective features, would be Compatibility Group F. However, a means of initiation which itself possesses two effective protective features would be Compatibility Group D; and an article with a means of initiation which possesses two effective protective features would be Compatibility Group D or E. Means of initiation adjudged as having two effective protective features should have been approved by the appropriate national authority. A common and effective way of achieving the necessary degree of protection is to use a means of initiation which incorporates two or more independent safety features.	—
<b>IRON OXIDE, SPENT OR IRON SPONGE, SPENT.</b> A mixture of wood shavings with iron oxide and possibly lime or other material, which has been obtained from coal gas purification after saturation with sulphur. This spent material is very liable to spontaneous heating and ignition.	1376
<b>ISOCYANATES, N.O.S. OR ISOCYANATE SOLUTION, N.O.S.</b> These include a number of chemical products used in the manufacture of plastic foams, synthetic rubber, etc. Some are sufficiently toxic or lachrymatory to need classification as toxic substances, particularly isocyanates in pure form. Others may need to be classified as flammable liquids, depending on their characteristics, and a number may not be subject to these Instructions.	2206, 2478, 3080
<b>JET PERFORATING GUNS, CHARGED, oil well, without detonator.</b> Articles consisting of a steel tube or metallic strip into which are inserted shaped charges connected by detonating cord, without means of initiation.	0124, 0494
<b>LACQUER BASE OR LACQUER CHIPS, NITROCELLULOSE, DRY.</b> It may consist of a colloid solid mixture of nitrocellulose, pigment, gums, and a plasticizer.	—
<b>LIGHTERS, FUSE.</b> Articles of various design actuated by friction, percussion or electricity and used to ignite safety fuse.	0131
≠ <b>LITHIUM BATTERY OR LITHIUM CELLS.</b> A battery is one or more cells which are electrically connected together by a permanent means. A cell is a single encased electromechanical unit which exhibits a voltage differential across its two terminals.	3090, 3091
<b>LITHIUM SILICON.</b> A so-called alloy of metallic lithium and silicon used for industrial purposes.	1417
<b>MAGNESIUM SCRAP.</b> Borings, clippings, scalplings, shavings, sheets or turnings from machining operations or cuttings from thin magnesium metal sheets. The scrap can be ignited by external flame and burns intensely and persistently. It does not heat spontaneously. The scrap may have a bright metal lustre or may be dull and sometimes have a painted surface.	—
<b>MASS EXPLOSION.</b> An explosion which affects almost the entire load virtually instantaneously.	—
<b>MATCHES, SAFETY.</b> Matches, contained in a book, card or box, which are only ignited when struck on a prepared surface.	1944
<b>MATCHES, 'STRIKE ANYWHERE' OR FUSEE.</b> They usually contain phosphorus sesquisulphide, potassium chlorate and other ingredients. The 'strike-anywhere' matches are readily ignited by friction on almost any dry surface.	1331, 2254
<b>METHYLACETYLENE AND PROPADIENE MIXTURE, STABILIZED.</b> A flammable gas mixture that is reasonably stable at ordinary temperatures. Although this is an acetylene derivative, the gas is not shipped dissolved in liquid and cylinders do not require an absorbent filler.	1060
<b>MINES.</b> Articles consisting normally of metal or composition receptacles and a bursting charge. They are designed to be operated by the passage of ships, vehicles or personnel. The term includes 'Bangalore torpedoes'.	0136, 0137, 0138, 0294
<b>MOTOR FUEL ANTI-KNOCK MIXTURE.</b> A mixture of one or more organic lead components such as tetraethyl lead, triethylmethyl lead, diethyldimethyl lead, ethyltrimethyl lead, and tetramethyl lead, with one or more halogen compounds such as ethylene dibromide and ethylene dichloride.	1649

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>NITRATING ACID MIXTURE.</b> A mixture of nitric and sulphuric acids used for the nitration of glycerin, cellulose or other organic substances. This acid mixture coming in contact with organic matter commonly causes fire, unless the mixture contains much water.	1796, 1826
<b>OIL GAS, COMPRESSED.</b> A gas made by the reaction of steam at high temperatures on gas oil or similar fractions of petroleum, or by high-temperature cracking of gas oil. The gas is flammable, but it is classified as a toxic gas because it contains a high proportion of carbon monoxide.	1071
<b>OXYGEN GENERATOR, CHEMICAL.</b> A device containing chemicals which upon activation releases oxygen as a product of chemical reaction. Chemical oxygen generators are used for the generation of oxygen for respiratory support, e.g. in aircraft, submarines, spacecraft, bomb shelters and breathing apparatus. Oxidizing salts such as chlorates and perchlorates of lithium, sodium and potassium, which are used in chemical oxygen generators, evolve oxygen when heated. These salts are mixed (compounded) with a fuel, usually iron powder, to form a chlorate candle, which produces oxygen by continuous reaction. The fuel is used to generate heat by oxidation. Once the reaction begins, oxygen is released from the hot salt by thermal decomposition (a thermal shield is used around the generator). A portion of the oxygen reacts with the fuel to produce more heat which produces more oxygen, and so on. Initiation of the reaction can be achieved by a percussion device, friction device or electric wire.	3356
<b>PLASTIC SOLVENT, N.O.S.</b> A name commonly used for mixtures of liquids employed for dissolving plastics or for thinning plastic cements. In general, they may contain flammable liquids, such as acetone, amyl acetate, or some of the alcohols or ketones. The classification is determined by the flash point.	—
<b>POLYESTER RESIN KIT.</b> The proper shipping name 'Polyester resin kit' covers different kits such as filler, bonding and sealing compounds, chemical anchors and fibreglass repair kits. A polyester resin kit commonly consists of an unsaturated polyester resin mixed with styrene and a separate hardener (usually a phlegmatized organic peroxide) as a minor component. The main component (viscous liquid or paste) is inherently flammable due to the styrene content (flash point 29°C to 32°C).	3269
<b>POLYMERIC BEADS, EXPANDABLE.</b> Semi-processed products used to manufacture polymeric articles, and which have been impregnated with a flammable gas or liquid as a blowing agent. They may evolve small quantities of flammable gas during transport.	2211
<b>POTASSIUM SODIUM ALLOYS.</b> Mixtures of metallic sodium and potassium that are solid at ordinary temperatures. All mixtures, regardless of physical state, will react vigorously with water and may be self-igniting. The mixtures are all combustible.	1422
<b>POTASSIUM SULPHIDE, ANHYDROUS.</b> A reddish-coloured solid having a strong odour. It is hygroscopic and oxidizes spontaneously on contact with air. Spontaneous ignition may occur in material improperly packed.	1382
<b>POWDER CAKE, (POWDER PASTE) WETTED.</b> Substance consisting of nitrocellulose impregnated with not more than 60 per cent of nitroglycerin or other liquid organic nitrates or a mixture of these.	0159, 0433
<b>POWDER, SMOKELESS.</b> Substance based on nitrocellulose used as propellant. The term includes propellants with a single base (nitrocellulose (NC) alone), those with a double base (such as NC and nitroglycerin (NG)) and those with a triple base (such as NC/NG/nitroguanidine). Cast, pressed or bag-charges of smokeless powder are listed under CHARGES, PROPELLING or CHARGES, PROPELLING FOR CANNON.	0160, 0161
<b>PRIMERS, CAP TYPE.</b> Articles consisting of a metal or plastic cap containing a small amount of primary explosive mixture that is readily ignited by impact. They serve as igniting elements in small arms cartridges, and in percussion primers for propelling charges.	0044, 0377, 0378
<b>PRIMERS, TUBULAR.</b> Articles consisting of a primer for ignition and an auxiliary charge of deflagrating explosive such as black powder used to ignite the propelling charge in a cartridge case for cannon, etc.	0319, 0320, 0376
<b>PROJECTILES.</b> Articles such as a shell or bullet which are projected from a cannon or other artillery gun, rifle or other small arm. They may be inert, with or without tracer, or may contain a burster or expelling charge or a bursting charge. The term includes: PROJECTILES, inert, with tracer; PROJECTILES, with burster or expelling charge; PROJECTILES, with bursting charge.	0167, 0168, 0169, 0324, 0344, 0345, 0346, 0347, 0424, 0425, 0426, 0427, 0434, 0435
<b>PROPELLANT, LIQUID.</b> A substance consisting of a deflagrating liquid explosive, used for propulsion.	0495, 0497
<b>PROPELLANTS.</b> Deflagrating explosives used for propulsion or for reducing the drag of projectiles.	—
<b>PROPELLANT, SOLID.</b> A substance consisting of a deflagrating solid explosive, used for propulsion.	0498, 0499

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>PYROPHORIC LIQUID/SOLID, ORGANIC/INORGANIC.</b> A substance that may ignite in air at or below room temperature in the absence of added heat, shock or friction.	2845, 2846, 3194, 3200
<b>PYROXYLIN SOLUTION.</b> Pyroxylin (nitrocellulose) or soluble cotton dissolved in amyl acetate or other organic solvents. Pyroxylin solution is used as a basis for the manufacture of lacquer, leather coating compounds, leather substitutes, cements, etc. It is generally more viscous than ordinary lacquers.	—
<b>RELEASE DEVICES, EXPLOSIVE.</b> Articles consisting of a small charge of explosive with means of initiation. They sever rods or links to release equipment quickly.	0173
<b>ROCKET MOTORS.</b> Articles consisting of a solid, liquid or hypergolic fuel contained in a cylinder fitted with one or more nozzles. They are designed to propel a rocket or a guided missile. The term includes: ROCKET MOTORS; ROCKET MOTORS WITH HYPERGOLIC LIQUIDS, with or without expelling charge; ROCKET MOTORS, LIQUID FUELLED.	0186, 0250, 0280, 0281, 0322, 0395, 0396
<b>ROCKETS.</b> Articles consisting of a rocket motor and a payload which may be an explosive warhead or other device. The term includes guided missiles and: ROCKETS, LINE-THROWING; ROCKETS, LIQUID FUELLED, with bursting charge; ROCKETS, with bursting charge; ROCKETS, with expelling charge; ROCKETS, with inert head.	0180, 0181, 0182, 0183, 0238, 0240, 0295, 0397, 0398, 0436, 0437, 0438, 0453
<b>SIGNALS.</b> Articles containing pyrotechnic substances designed to produce signals by means of sound, flame or smoke or any combinations thereof. The term includes: SIGNAL DEVICES, HAND; SIGNALS, DISTRESS, ship; SIGNALS, RAILWAY TRACK, EXPLOSIVE; SIGNALS, SMOKE.	0191, 0192, 0193, 0194, 0195, 0196, 0197, 0313, 0373, 0487, 0492, 0493
<b>SLUDGE ACID.</b> The acid waste resulting from oil refining, or from nitrating processes. It generally has somewhat the same hazards as the original acid.	1906
<b>SODA LIME.</b> A mixture of calcium oxide or calcium hydroxide with sodium hydroxide.	1907
<b>SODIUM SULPHIDE, ANHYDROUS.</b> A yellow or reddish-coloured solid having a strong odour. It is hygroscopic and oxidizes spontaneously on contact with air. Spontaneous ignition may occur in material improperly packed.	1385
<b>SOLVENTS.</b> Substances capable of dissolving other substances to form a uniformly dispersed mixture or solution. Examples of organic solvent groups are esters, ethers, ketones, amines and nitrated and chlorinated hydrocarbons. Many solvents are flammable and toxic to varying degrees.	—
<b>SOUNDING DEVICES, EXPLOSIVE.</b> Articles consisting of a charge of detonating explosive. They are dropped from ships and function when they reach a predetermined depth or the sea bed.	0204, 0296, 0374, 0375
<b>STABILIZED.</b> Stabilized means that the substance is in a condition that precludes uncontrolled reaction. This may be achieved by methods such as the addition of an inhibiting chemical, degassing the substance to remove dissolved oxygen and inerting the air space in the package, or maintaining the substance under temperature control.	
<b>SUBSTANCES, EXPLOSIVE, VERY INSENSITIVE (SUBSTANCES, EVI), N.O.S.</b> Substances that present a mass explosion hazard but are so insensitive that there is very little probability of initiation or of transition from burning to detonation (under normal conditions of transport) and that have passed Test Series 5.	0482
<b>SULPHURIC ACID, FUMING.</b> Sulphuric acid in which an excess of sulphur trioxide has been dissolved. It evolves toxic fumes whilst ordinary sulphuric acid does not.	1831
<b>SULPHURIC ACID, SPENT.</b> Sulphuric acid usually of high concentration, which has been used for chemical processes and contains residual organic matter.	1832
<b>TORPEDOES.</b> Articles containing an explosive or non-explosive propulsion system and designed to be propelled through water. They contain an inert head or a warhead. The term includes: TORPEDOES, LIQUID FUELLED, with inert head; TORPEDOES, LIQUID FUELLED, with or without bursting charge; TORPEDOES, with bursting charge.	0329, 0330, 0449, 0450, 0451
<b>TOTAL CONTENTS.</b> Such a substantial proportion that the practical hazard should be assessed by assuming simultaneous explosion of the whole of the explosive content of the load or package.	—
<b>TRACERS FOR AMMUNITION.</b> Sealed articles containing pyrotechnic substances, designed to reveal the trajectory of a projectile.	0212, 0306

<i>Term and explanation</i>	<i>UN Number(s), when relevant</i>
<b>TURBINE ENGINES.</b> Generic term used for turbine engines fuelled by flammable liquid, flammable gas or other combustible fuels. They may power fixed wing aircraft, rotorcraft, hover craft (cushion craft), marine vessels, land vehicles, pumps and power-generating plants.	3166
<b>TURPENTINE SUBSTITUTE.</b> A petroleum distillate which might contain some aromatic components and which usually has a flash point of approximately 40°C. White spirit is a synonym for turpentine substitute.	1300
<b>WARHEADS.</b> Articles consisting of detonating explosives. They are designed to be fitted to a rocket, guided missile or torpedo. They may contain a burster or expelling charge or bursting charge. The term includes: WARHEADS, ROCKET, with burster or expelling charge; WARHEADS, ROCKET, with bursting charge; WARHEADS, TORPEDO, with bursting charge.	0221, 0286, 0287, 0369, 0370, 0371
+ <b>WATT-HOUR RATING.</b> Expressed in watt-hours, the watt-hour rating is calculated by multiplying a cell's or battery's rated capacity, in ampere-hours, by its nominal voltage.	3480, 3481
<b>ZIRCONIUM SUSPENDED IN A FLAMMABLE LIQUID.</b> Very finely divided metallic zirconium which is usually suspended in some highly volatile and flammable liquid. If spilled, the material is liable to self-ignition.	1308

**Attachment 3**

**NOTIFIED VARIATIONS FROM  
THE INSTRUCTIONS**

## Chapter 1

### VARIATIONS NOTIFIED BY STATES

1.1 Paragraph 2.2.1 of Annex 18 provides that Contracting States shall take the necessary measures to achieve compliance with the detailed provisions of these Technical Instructions. However, where a Contracting State does adopt different provisions from those specified in these Technical Instructions, 2.5 of Annex 18 requires that ICAO be notified promptly of such State provisions for publication in the Technical Instructions.

≠ 1.2 Those different provisions which were notified to ICAO by States, prior to 22 July 2008, appear in Table A-1. The variations notified by States, unless the context makes it otherwise apparent, apply as follows:

- a) where such variations result in more restrictive provisions than those contained in these Instructions, they apply to the transport of dangerous goods by air:
  - 1) to, from or through all territory subject to the sovereignty of the notifying State by all operators; and
  - 2) outside the territory of the notifying State to all operators for whom the notifying State is the State of the Operator;
- b) where such variations result in less restrictive provisions than those contained in these Instructions, the variations are listed for information only and may only be applied within the territory of the notifying State by operators for whom the notifying State is the State of the Operator.

1.3 Throughout the Instructions, the identifying code of each State variation has been placed beneath the heading of the Chapter(s) principally affected. Where State variations apply to specific articles or substances, the identifying code appears in column 6 of Table 3-1 against the appropriate proper shipping name.

1.4 The table of State variations (Table A-1) is based on data provided by the States concerned. This table is provided for information only and any further details required should be obtained from the appropriate government department.

≠ 1.5 If a State needs to make variations based on new requirements appearing in this edition of the Instructions, it should notify ICAO by using the form appearing at the end of this Chapter. If such variations are received by 17 April 2009, they will appear in an Addendum to be published in May 2009.

1.6 Variations have been notified by the following States:

Australia — AU	Netherlands — NL
Belgium — BE	Pakistan — PK
Brunei Darussalam — BN	Poland — PL
Canada — CA	Russian Federation — RU
China — CN	Saudi Arabia — SA
Denmark — DK	Singapore — SG
Fiji — DQ	South Africa — ZA
France — FR	Spain — ES
Germany — DE	Sri Lanka — VC
Hong Kong — HK	Switzerland — CH
India — IN	Turkey — TR
Iran (Islamic Republic of) — IR	Ukraine — UA
Italy — IT	United Arab Emirates — AE
Jamaica — JM	United Kingdom — GB
Japan — JP	United States — US
Macao — MO	Vanuatu — VU
Malaysia — MY	

Table A-1. State variations

The identifying code for each State variation consists of the two-letter identifier for that State plus a sequential number. Variations are listed in the alphabetical order of these identifying codes. For each variation the relevant Part and Chapter or paragraph numbers of the Instructions are given.

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
<b>AE — UNITED ARAB EMIRATES</b>		
≠ AE 1	<p>On shipments to, from, within or transiting through the United Arab Emirates (UAE), emergency response information, as described below, must be provided for all dangerous goods for which a Transport Document is required.</p> <p>The Transport Document (shipper's declaration dangerous goods) required by these Instructions must include a 24-hour emergency response telephone number, which must include the international code and area code, for use in the event of an incident or accident involving dangerous good(s). The number must be monitored by an individual who can be contacted in case of an emergency and who:</p> <ol style="list-style-type: none"> <li>1) is able to converse in English;</li> <li>2) is knowledgeable of the hazards and characteristics of the dangerous good(s) being transported;</li> <li>3) has comprehensive emergency response and accident mitigation information for the dangerous good(s) or has immediate access to a person who possesses such knowledge and information.</li> </ol>	5;4.1
≠ AE 2	Cargo agents and freight forwarders accepting or processing dangerous goods for transport by air must ensure that they have a minimum of two GCAA dangerous goods certified staff available at all times to handle such consignments. This is a prerequisite for GCAA to approve the dangerous goods freight forwarder application or to renew their certificate. Ground handling agents must only accept dangerous goods from GCAA certified/approved cargo agents or freight forwarders.	1;4
≠ AE 3	<p>The request to carry dangerous goods under exemption or approval by the State or the competent authority must be submitted to the Safety and Security Section of GCAA, at least seven days before the date of flight on which the proposed dangerous goods are planned to be carried. The address and contact details of the Safety and Security Section are as follows:</p> <p style="margin-left: 40px;">Safety and Security Section Department of Aviation Safety and Security P.O. Box 6558 Abu Dhabi United Arab Emirates Fax: +971 2 4054461</p>	1;1
+ AE 4	The operator must be responsible for coordinating with the shipper and consignee the return of any remaining unclaimed, damaged and/or leaking dangerous goods to the State of Origin whenever instructed to do so by GCAA.	7;3
+ AE 5	Transportation of dangerous goods to, from or within the UAE must be subject to compliance with the provisions of these Instructions and the UAE Civil Aviation Regulations. A copy of the UAE Civil Aviation Regulations can be obtained online using the GCAA official website, i.e. <a href="http://www.gcaa.ae">www.gcaa.ae</a> .	
+ AE 6	Dangerous goods must never be loaded in the passenger cabin or the flight deck of the aircraft, except when required to do so in accordance with 8;1.1 of these Instructions and paragraphs 2.3 and 2.5 of the IATA Dangerous Goods Regulations.	7;2
+ AE 7	<p>The ground handling agent and the operator must ensure that any package, overpack, freight container for radioactive material, unit load device, or other type of pallet containing dangerous goods is inspected before being loaded onto an aircraft. No consignment shall be accepted for carriage unless the following conditions of carriage are met:</p> <ol style="list-style-type: none"> <li>1) the consignment is appropriately marked and labelled as per the IATA Dangerous Goods Regulations and GCAA requirements; and</li> <li>2) the consignment is leakproof and its integrity has not been compromised at the time it is loaded onto an aircraft.</li> </ol>	7;1, 7;3

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
+	<p>AE 8 The ground handling agent and the operator must ensure that the required information about the dangerous good(s) to be loaded onto the aircraft is communicated to the person responsible for weight and balance for that particular flight. Such information must include the following, as a minimum:</p> <ol style="list-style-type: none"> <li>1) the air waybill number;</li> <li>2) the proper shipping name, supplemented with the technical name as appropriate and UN or ID number;</li> <li>3) the class or division and subsidiary risk corresponding to the labels applied and, for Class 1, the compatibility group;</li> <li>4) the packing group;</li> <li>5) for non-radioactive material, the number of packages, the net quantity or gross weight, if applicable, in respect of each package;</li> <li>6) for radioactive material, the number and category of packages, overpacks or freight containers and the transport index and dimensions for each, if applicable;</li> <li>7) whether the package is restricted to cargo aircraft only;</li> <li>8) the airport at which the package is to be unloaded; and</li> <li>9) where applicable, an indication that the dangerous goods are being carried under a State exemption.</li> </ol>	7;4
+	AE 9 The dangerous goods acceptance checklist must reflect applicable requirements contained in the latest Instructions and IATA Dangerous Goods Regulations.	7;1.3
+	<p>AE 10 An import permit must be obtained from the Radiation Protection and Control Department of the UAE Federal Environmental Agency before forwarding radioactive material to the UAE. The contact details of the Department of Radiation Protection and Control within the UAE is as follows:</p> <p style="margin-left: 40px;">Federal Environmental Agency P.O. Box 8820, Dubai Telephone: +971 4 3965888 Facsimile: +971 4 3962113 Website: <a href="http://www.fea.gov.ae">www.fea.gov.ae</a></p>	
+	AE 11 Air operator(s) may carry dangerous goods to, from and via UAE provided they are dangerous goods certified by the Civil Aviation Authority of its State of Origin.	
+	AE 12 Dubai-destined arms and ammunitions and explosives and all other Class 1 dangerous goods require import permission from the Dubai police (minimum 48 hours pre-alert notification required). Arms and ammunition may not be imported except with a licence obtained from the UAE Ministry of Defence.	
+	AE 13 Abu Dhabi-destined and transshipments of arms and ammunitions and explosives and all other Class 1 dangerous goods require import permission from the UAE Ministry of Interior of Abu Dhabi before forwarding.	
<b>AU — AUSTRALIA</b>		
+	<p>The Australian national authority for Annex 18 and competent authority for these Instructions is the:</p> <p style="margin-left: 40px;">Civil Aviation Safety Authority (CASA) GPO Box 2005 Canberra ACT 2601 Australia E-mail: <a href="mailto:dg@casa.gov.au">dg@casa.gov.au</a> Telephone: +61 131757 Facsimile: +61 3 9927 5336 or +61 8 9366 2810 Website: <a href="http://www.casa.gov.au/dg">www.casa.gov.au/dg</a></p>	
	<p>AU 1 Dangerous goods requiring approval under Special Provisions A1 or A2 of the Technical Instructions may only be carried on a passenger aircraft in Australian territory with the permission of the Civil Aviation Safety Authority (CASA). Applications for permission should be lodged with CASA at least ten days prior to the proposed flight.</p>	Table 3-1
	<p>AU 2 Dangerous goods requiring approval under Special Provision A109 of the Technical Instructions may only be carried on a cargo aircraft in Australian territory with the permission of the Civil Aviation Safety Authority (CASA). Applications for permission should be lodged with CASA at least ten days prior to the proposed flight.</p>	Table 3-1 3,3

Identifying code	Variation	Relevant paragraphs
≠	<p>AU 3 Infectious substances other than human blood products, human urine and human tissue, are prohibited from entry to Australia without prior approval from Australian Health Authorities. Requests for approval should be addressed to:</p> <p>Australian Quarantine and Inspection Service            Department of Agriculture, Fisheries and Forestry GPO Box 858            Canberra, ACT 2601            Australia            Telephone: +61 2 6272 3933            Website: <a href="http://www.agis.gov.au">http://www.agis.gov.au</a></p>	Table 3-1
+	<p>AU 4 For the purposes of compliance with 7;4.6, notification of a dangerous goods incident is to be reported to the Civil Aviation Safety Authority (CASA) within two working days. This notification is in addition to, and not instead of, that required under Annex 13.</p>	7;4.6
<b>BE — BELGIUM</b>		
BE 1	<p>Definition of “explosive substance”: According to the Belgian regulations any substance likely to be used for its explosive, deflagrating or pyrotechnic properties is considered an explosive substance.</p>	1;3.1
BE 2	<p>No transport by air of any explosive may take place from, to or in transit through Belgium except by authorization of the Minister responsible for the explosives service, who may grant exemptions to the methods of packaging.</p> <p>Applications may be made only by persons or corporations having a residence or an office in Belgium. When this is not the case, the applicant must have a responsible representative, residing in Belgium and approved by Ministerial Decree (information on this subject is obtainable from the:</p> <p>Service des Explosifs            Ministère des Affaires Economiques            Konig Albert II-iaan 16            1000 Bruxelles            Telephone: 322 206 4111            Facsimile: 322 206 5752)</p>	1;1.2 2;1.5 4;3
	<p>The authorization for to which reference is made above is furthermore subject to the agreement of the:</p> <p>Belgian Civil Aviation Administration            Ministry of Communications and Infrastructure, CCN            rue du Progrès 80            1030 Bruxelles            Telephone: 322 206 3211            Facsimile: 322 206 3290</p>	
	<p>These various provisions are issued by the Belgian authority for regulation of explosive (Royal Decree of 23 September 1958, amended), authorization for transport by air being therefore also issued, in practice, only on a case-by-case basis, except with respect to products considered in Belgium as safety ammunition or fireworks for which an authorization covering several shipments over a period of time may in principle be granted.</p>	
	<p>It should be noted that in the case of importation or exportation or transit partially over land, any transport that is authorized only case-by-case is subject to prior application specifying the complete itinerary, including the land portion.</p>	
BE 3	<p>Those substances listed in Table 3-1 with “BE 3” shown in column 6 are defined as “explosive substances” and are subject to the conditions of Variation BE 2.</p>	Table 3-1
BE 4	<p>Prior authorization of the:</p> <p>Federal Agency for Nuclear Control            Ravensteinstraat 36            1010 Bruxelles            Telephone: 322 289 2111            Facsimile: 322 289 2121            E-mail: <a href="mailto:info@fanc.fgov.bc">info@fanc.fgov.bc</a></p>	1;1.2 2;7 5;1.2.2

Identifying code	Variation	Relevant paragraphs
	<p>is required for transport from, to or in transit through Belgium of radioactive substances and fissile substances of which the quantities exceed the limits of activity defined in the General Regulations for the Protection of the Population, Workers and Environment against the Danger of Ionizing Radiations (Royal Decree of 20 July 2001). Authorization for transport by air is furthermore subject to the agreement of the:</p> <p>Belgian Civil Aviation Administration Ministry of Communications and Infrastructure, CCN rue du Progrès 80 1030 Bruxelles</p> <p>The carriage in aircraft over the territory of the Kingdom of Belgium of:</p> <ol style="list-style-type: none"> <li>1) fissile radioactive material as defined in ICAO Doc 9284, 2;7.1 in quantities exceeding the limits set out in 2;7.2.3.5; and</li> <li>2) radioactive material: <ul style="list-style-type: none"> <li>— in a Type B(U) package containing more than 3000 A<sub>1</sub> or 3000 A<sub>2</sub> or 1000 TBq, whichever is the lower; or</li> <li>— in a Type B(M) package; or</li> <li>— in a Type C package containing more than 3000 A<sub>1</sub> or 3000 A<sub>2</sub> or 1000 TBq, whichever is the lower; or</li> <li>— transported under special arrangement</li> </ul> </li> </ol> <p>shall not be accepted without prior permission by the Belgian Civil Aviation Administration.</p>	1;1.2
≠ BE 5	<p>The following requirements apply to aircraft registered:</p> <ol style="list-style-type: none"> <li>a) in Belgium no matter where they are operating; and</li> <li>b) in a State other than Belgium and which are not required to operate under and in accordance with Annex III to Council Regulation (EC) NO. 3922/1991 of 16 December 1991 on the harmonization of technical requirements and administrative procedures in the field of civil aviation ("EU-OPS"), when they are operating in Belgium.</li> </ol> <p>Aircraft may only carry dangerous goods with the prior approval of the Civil Aviation Authority. Carriage of such goods must be in compliance with the ICAO Technical Instructions. Application for a general or special authorization must be submitted to:</p> <p>Belgian Civil Aviation Authority Operations Department — Dangerous Goods CCN — 2nd Floor Vooruitgangstraat 80 — Bus 5 B-1030 Brussels Belgium Telephone: +32 2 277 43 58 Facsimile: +32 277 42 57 E-mail: koenraad.clerbout@mobilif.fgov.be</p>	1;1.2
	<p>This variation does not apply:</p> <ol style="list-style-type: none"> <li>a) to aircraft registered in a State other than Belgium and which are required to operate under and in accordance with EU-OPS, providing an approval granted by such a State is held and a copy of this approval is submitted to the Belgian Civil Aviation Authority;</li> <li>b) unless otherwise specified in the ICAO Technical Instructions, to dangerous goods in the case of overflight of the Belgian territory by foreign operators, provided the operator has permission from its State of Registry to carry dangerous goods in accordance with the provisions of these Instructions; or</li> <li>c) to the transport of dry ice (carbon dioxide, solid), UN 1845, when used for cooling purposes in combination with goods not subject to these Instructions. All other requirements of these Instructions concerning the transport of dry ice remain applicable.</li> </ol>	
	<p><b>BN — BRUNEI DARUSSALAM</b></p>	
BN 1	<p>Negara Brunei Darussalam has selected the English language for use in all documentation and correspondence with respect to the transport of dangerous goods by air. The English version of Annex 18 and the Technical Instructions will be used.</p>	5;4

Identifying code	Variation	Relevant paragraphs
<b>CA — CANADA</b>

<b>EU-OPS aircraft</b>		
Aircraft registered in a State other than the United Kingdom and which are required to operate under and in accordance with EU-OPS do not require the approval of the Civil Aviation Authority providing an approval granted by such a State is held.		
≠	GB 3 The following requirement applies to aircraft registered in a State other than the United Kingdom and which are not required to operate under and in accordance with Annex III to Regulation (EC) No. 3922/1991 ("EU-OPS"), when they are operating in the United Kingdom, excluding those only overflying:  Dangerous goods requiring approval under Special Provisions A1 or A2 of these Instructions, may only be carried on a passenger aircraft with the permission of the Civil Aviation Authority, irrespective of whether or not the United Kingdom is the State of Origin. Application for permission should be made at least ten working days prior to the proposed flight date and must be submitted to the address stated in GB 2.  Dangerous goods may be carried into the United Kingdom on a cargo aircraft under an A2 or A109 State of Origin approval providing the Civil Aviation Authority has been notified in writing at least two working days in advance of the proposed flight date. Additionally, since controls exist for the quantities of some explosives which may be carried to or from specific airfields in the United Kingdom, operators must seek advice from the Civil Aviation Authority as to the suitability of the intended airfield of landing and unloading when Class 1 dangerous goods are being carried under an A2 or A109 approval.	Table 3-1 3;3 Table S-3-1
<b>EU-OPS aircraft</b>		
Aircraft registered in a State other than the United Kingdom and which are required to operate under and in accordance with EU-OPS do not require the approval of the Civil Aviation Authority providing an approval granted by such a State is held.		
GB 4	For the purposes of compliance with 7;4.6, notification of dangerous goods on an aircraft involved in an aircraft accident or serious incident or other incident in the United Kingdom should be sent by the quickest means possible to:  Dangerous Goods Office Civil Aviation Authority 1W, Aviation House Gatwick Airport South West Sussex, RH6 0YR Telephone: + 44 (0)1293-573800, for notifications Monday to Friday between the hours of 0900 and 1700 UK time, or + 44 (0)1293-567171, at all other times.	7;4.6
This notification is in addition to, and not instead of, that required under Annex 13.		
GB 5	Infectious substances of Category A (UN 2814 and UN 2900) and Biological substances, Category B (UN 3373) are not permitted in international mail either to or from the United Kingdom. Infectious substances of Category A (UN 2814 and UN 2900) are not permitted in domestic mail. Biological substances, Category B (UN 3373) are not permitted in domestic mail except under special arrangements. Exempt patient specimens are not permitted in international or domestic mail except under special arrangements.	1;2.3
GB 6	When any operator intends to overfly the United Kingdom carrying any package containing radioactive material with an activity greater than: (a) for special form 3000 A <sub>1</sub> or 100000 A <sub>2</sub> , whichever is the lower; or (b) for all other radioactive material 3000 A <sub>2</sub> , it must notify the Dangerous Goods Office (contact details as in GB 2) at least two working days before the expected date of the flight, providing the information required by 5;1.2.1.4 d), together with the names and addresses of the shipper and consignee, and the contact details for the operator. If the flight does not take place as planned, or if there are any changes in the information provided, the Dangerous Goods Office must be notified immediately. The operator is not required to wait for any acknowledgement or acceptance before carrying out the flight.	5;1.2.1.4
<b>HK — HONG KONG SPECIAL ADMINISTRATIVE REGION, CHINA</b>		
HK 1	Operators wishing to carry dangerous goods in aircraft to, from or over the Territory of Hong Kong must obtain prior written permission from the Director of Civil Aviation. Applications must include details of dangerous goods training programmes. Further information may be obtained from the:	1;4 7;1

For mixtures of radionuclides, see Note 7 to Appendix A to 49 CFR 172.101.

Hazardous substances, except for those that are hazardous wastes as defined in Section II below, must comply with the following requirements:

- a) For a hazardous substance that is a dangerous good according to these Technical Instructions other than under the proper shipping names "ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S." or "ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S.":
  - 1) unless already included in the required shipping name, and except for radioactive material in Class 7, the name of the hazardous substance shall be shown in parentheses, in association with the dangerous goods description on the transport document and in association with the proper shipping name on package marking; and
  - 2) the letters "RQ" shall be entered on the transport document either before or after the basic description and in association with the proper shipping name required to be marked on the package.
- b) For hazardous substances that do not meet any other definition of dangerous goods according to these Technical Instructions:
  - 1) the hazardous substance shall be shipped under the basic dangerous goods description "ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S., Class 9, UN 3082, III" or "ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S., Class 9, UN 3077, III", as appropriate, and in accordance with the requirements of these Technical Instructions applying to the shipment of goods under this description;
  - 2) the package must meet all applicable General Packing Requirements of Part 4, Chapter 1 of these Instructions that would apply to dangerous goods of Packing Group III;
  - 3) the letters "RQ" shall be entered on the transport document either before or after the basic description and in association with the proper shipping name required to be marked on the package; and
  - 4) the name of the hazardous substance shall be shown in parentheses, in association with the dangerous goods description on the transport document and in association with the proper shipping name on package marking. If the material contains more than two hazardous substances, only the two hazardous substances having the lowest reportable quantities must be identified.

*Note.*— The list of Hazardous Substances and the applicable RQ as shown in Appendix A to 49 CFR 172.101 is available via the internet at:

<http://hazmat.dot.gov/regs/intl/icaovar.htm>.

- II. *Hazardous waste.* A hazardous waste is any material that is subject to the hazardous waste manifest requirements of the United States Environmental Protection Agency (EPA) specified in 40 CFR Part 262. The following requirements apply to the transport of hazardous wastes:
  - a) For a hazardous waste that is a dangerous good according to these Technical Instructions other than under the proper shipping names "ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S." or "ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S.":
    - 1) the word "WASTE" must precede the proper shipping name in the transport document and package markings; and
    - 2) the requirements of 49 CFR 172.205, with respect to the hazardous waste manifest apply.

Identifying code	Variation	Relevant paragraphs	
	<p>b) For hazardous wastes that do not meet any other definition of dangerous goods according to these Technical Instructions:</p> <ol style="list-style-type: none"> <li>1) the hazardous wastes shall be shipped under the basic dangerous goods description "WASTE ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S., Class 9, UN 3082, III" or "WASTE ENVIRONMENTALLY HAZARDOUS SUBSTANCE, SOLID, N.O.S., Class 9, UN 3077, III", as appropriate, and in accordance with the requirements of these Technical Instructions applying to the shipment of goods under this description;</li> <li>2) the package must meet all applicable General Packing Requirements of Part 4, Chapter 1 that would apply to dangerous goods of Packing Group III;</li> <li>3) the requirements of 49 CFR 172.205 with respect to the hazardous waste manifest apply; and</li> <li>4) for those hazardous wastes that meet the definition of a hazardous substance, the letters "RQ" and the name of the hazardous substance in parentheses shall be shown in association with the basic description on transport documents and package markings.</li> </ol> <p><i>Note 1.— Hazardous wastes can only be transported within the United States by carriers who have obtained a Waste Transporter Identification Number from the Environmental Protection Agency (EPA).</i></p> <p><i>Note 2.— The assignment of substances described in I and II above to UN 3077 and UN 3082 is in accordance with special provision A97 of these Technical Instructions.</i></p> <p><i>Note 3.— The list of Hazardous Substances and the applicable RQ as shown in Appendix A to 49 CFR 172.101 is available via the internet at:</i></p> <p style="text-align: center;"><a href="http://hazmat.dot.gov/regs/intl/icaovar.htm">http://hazmat.dot.gov/regs/intl/icaovar.htm</a>.</p> <p>III. <i>Other materials.</i> Materials which are not subject to the requirements of these Technical Instructions but meet the definition of a hazard class in 49 CFR Parts 171-180 must be transported in accordance with those regulations.</p>		
≠	US 5	<p>An explosives article or substance may not be transported to, from or within the United States without prior approval by the appropriate authority of the U.S. (see US 1), Attention: Office of Hazardous Materials Special Permits and Approvals (PHH-30)). Such approval remains valid for subsequent transport of the article or substance provided there is no change in its composition, design or packaging. Except as otherwise provided in 49 CFR 172.320, each package containing an explosives article or substance must be marked with the EX-number assigned in the approval for each substance, article or device contained in the package. The EX-number may also be provided in association with the description of dangerous goods on the transport document rather than marked on the package as provided in 49 CFR 172.320(d). Cartridges, small arms of the kind listed in 49 CFR 173.56(h) do not require prior approval or an EX-number.</p>	2;1.3
≠	US 6	<p>Cylinders transported to, from or within the United States must be manufactured, inspected and tested in accordance with the applicable specifications given in 49 CFR 178, except that foreign cylinders received in the United States for charging may be transported for purposes of export from the United States in accordance with 49 CFR 171.23(a)(4). Portable tanks other than UN portable tanks manufactured outside the United States that meet the applicable requirements of the UN Model Regulations must be designed and approved in accordance with the requirements of 49 CFR 178.270 through 178.272.</p> <p>Except as provided in 49 CFR 173.306, aerosol containers larger than 120 millilitres capacity (four fluid ounces) must be non-refillable metal receptacles. Aerosols must consist of a gas compressed, liquefied or dissolved under pressure, with the sole purpose of expelling a nonpoisonous (other than a Division 6.1 Packing Group III material) liquid, paste or powder and fitted with a self-closing release device allowing contents to be ejected by the gas.</p>	Table 3-1  2;2 PI 203, PI 204, PI Y204 (UN 1950)
≠	US 7	<p>Lighters or other similar devices containing flammable gas (e.g. lighters for fireplaces and torches) may not be transported to, from or within the United States, unless the design of the device has been examined and tested by a person authorized by the appropriate authority of the United States (see US 1). For design samples being submitted for examination and testing, see 49 CFR 173.308.</p>	

Identifying code	Variation	Relevant paragraphs
	Until 1 January 2012, approval numbers issued by the appropriate authority of the United States (see US 1) prior to 1 January 2007 may continue to be marked on packages and annotated on the transport document where applicable. After that time, previously issued approvals (i.e. T-**) will no longer be valid and each lighter design currently in production must be re-examined and tested under the provisions of 49 CFR 173.308.	5;2 5;4
≠ US 10	The following additional requirements or limitations apply to the transport of radioactive material to, from or within the United States:	5;1.2 7;1
	a) Radioactive material, other than that contained in excepted packagings, may not be offered for transport aboard passenger aircraft unless the radioactive material is intended for use in, or incident to, research or medical diagnosis or treatment. The transport document for the radioactive material, other than that contained in excepted packagings aboard a passenger aircraft, must contain a certification stating that the shipment contains radioactive material intended for use in, or incident to, research or medical diagnosis or treatment.	5;1.2 7;1
	b) No person may offer for transport aboard a passenger aircraft a package or an overpack with a transport index greater than 3.0.	
	c) No person may offer or transport plutonium aboard an aircraft unless: <ol style="list-style-type: none"> <li>1) the plutonium is contained in a medical device designed for individual human application;</li> <li>2) the specific activity of the material containing the plutonium is less than 1 Bq/g;</li> <li>3) the plutonium is shipped in a single package containing no more than an A2 quantity of plutonium in any isotope or form and is shipped in accordance with applicable provisions of these Instructions for Class 7 radioactive material; or</li> <li>4) the plutonium is specifically authorized for air shipment by the appropriate authority of the U.S.</li> </ol>	
	d) For a package containing radioactive material with an activity greater than: <ol style="list-style-type: none"> <li>1) <math>3000 \times A_1</math>;</li> <li>2) <math>3000 \times A_2</math>; or</li> <li>3) 1000 TBq (27000 Ci), whichever is least,</li> </ol> the notation "highway route controlled quantity" must appear on the transport document.	
	e) Packages containing: <ol style="list-style-type: none"> <li>1) <math>3000 \times A_1</math>;</li> <li>2) <math>3000 \times A_2</math>; or</li> <li>3) 1000 TBq (27000 Ci); whichever is least,</li> </ol> must bear the Radioactive material, Class 7, Category III — Yellow label.	5;1.2.3.1.4
	f) All Type B(U), Type B(M), Type H(U), Type H(M) and fissile package designs must be certified by the U.S. Department of Transportation. Individual packages with a criticality safety index exceeding 50, and shipments of packages with a total criticality safety index greater than 50 on passenger aircraft and 100 on cargo aircraft, may not be transported to, from or within the United States aboard a passenger or cargo aircraft without the prior approval of the appropriate authority of the United States (see US 1). Requests for package design certification and approvals should be directed to the appropriate authority of the U.S., Attention: Radioactive Materials Branch (PHH-23).	6;7.7 6;7.8
	g) Except for low specific activity material and surface contaminated objects, activity limits for Type A and Type B packages shall be limited in accordance with 49 CFR 173.431.	
US 11	A nonspillable wet electric storage battery may only be regarded as not subject to these Instructions if the battery and its outer packaging are plainly and durably marked "NONSPILLABLE" or "NONSPILLABLE BATTERY" and the battery meets the conditions for being regarded as not subject to these Instructions contained in Special Provision A67.	Table 3-2

Identifying code	Variation	Relevant paragraphs
≠ US 12	<p>On shipments to, from, within or transiting through the U.S., emergency response information as described below must be provided for all dangerous goods other than magnetized material, dangerous goods for which no Transport document is required, and Other Regulated Material as defined in 49 CFR 173.144.</p> <p><i>Telephone number.</i> The transport document required by these Instructions must include an emergency response telephone number (including area codes and for international numbers for locations outside the U.S., the country and city codes needed to complete the call from within the U.S.) for use in the event of an incident involving the dangerous good(s). The number must be monitored at all times while the dangerous good is in transportation, including storage incident to transportation, by a person who:</p> <ol style="list-style-type: none"> <li>1) is knowledgeable of the hazards and characteristics of the dangerous good(s) being transported;</li> <li>2) has comprehensive emergency response and accident mitigation information for the dangerous good(s); or</li> <li>3) has immediate access to a person who possesses such knowledge and information.</li> </ol> <p>The telephone number must be entered on the Transport document and its purpose clearly identified (e.g. "EMERGENCY CONTACT: ***"), either:</p> <ol style="list-style-type: none"> <li>1) immediately following the description of the dangerous good listed on the document, or</li> <li>2) if only one number applies to each dangerous good listed on the Transport document, the information may be entered in a single prominent location, provided that the number is identified as the emergency response telephone number.</li> </ol> <p>The telephone number must be the number of the person offering the dangerous goods for transportation or the number of an agency or organization capable of, and accepting responsibility for, providing the detailed information concerning the dangerous good. A person offering a dangerous good for transportation who lists the telephone number of an agency or organization must ensure that agency or organization has received current information on the material before it is offered for transportation.</p> <p>An emergency response telephone number is not required for materials properly described under the shipping names "Battery-powered equipment", "Battery-powered vehicle", "Carbon dioxide, solid", "Consumer commodity", "Dry ice", "Engines, internal combustion (flammable gas powered)", "Engines, internal combustion (flammable liquid powered)", "Vehicle (flammable gas powered)", "Vehicle (flammable liquid powered)". "Castor beans, flakes, meal or pomace". "Refrigerating machines" and materials transported under the limited quantity provisions.</p> <p><i>Emergency response information.</i> Emergency response information relative to the dangerous good being transported must be immediately available at all times the dangerous good is present. This information should be appropriate for use in emergency and accident response to an incident, including an incident occurring during ground operations. The information must include as a minimum:</p> <ol style="list-style-type: none"> <li>1) the description of the dangerous good in accordance with 5;4. of these Instructions;</li> <li>2) immediate hazards to health;</li> <li>3) risks of fire or explosion;</li> <li>4) immediate precautions to be taken in the event of an accident or incident;</li> <li>5) immediate methods for handling fires;</li> <li>6) initial methods for handling spills or leaks in the absence of a fire; and</li> <li>7) preliminary first aid measures.</li> </ol> <p>The information must be printed in English, available away from the package containing the dangerous goods and immediately accessible in the event of an incident. Methods of compliance include, but are not limited to:</p> <ol style="list-style-type: none"> <li>1) including the information on the Transport document;</li> <li>2) locating the information in a separate document such as a material safety data sheet which includes at least all of the information listed above; or</li> </ol>	5;4.1.4 7;4.4

Identifying code	Variation	Relevant paragraphs
<p>3) providing the information for use in conjunction with the Transport document (or aboard aircraft, in conjunction with the Information to Pilot-in-Command as required in 7;4.1 of these Instructions), in a separate document, such as the ICAO <i>Emergency Response Guidance for Aircraft Incidents involving Dangerous Goods</i> (Doc 9481).</p> <p>≠ US 13</p>	<p>Operators must comply with all requirements of 49 CFR, Part 175 (see US 1). These requirements include, but are not limited to, the following:</p> <p>a) A package prepared in accordance with these Technical Instructions for transport to, from or within the United States must not be accepted unless the shipper has complied with all applicable United States variations indicated in these Technical Instructions.</p> <p>b) A copy of the transport document, or an electronic image thereof, must be retained by the initial operator for not less than one year after the dangerous goods are accepted by the initial operator. Each shipping paper copy must include the date of acceptance by the initial operator. The date on the shipping paper may be the date a shipper notifies the air carrier that a shipment is ready for transportation, as indicated on the airway bill or bill of lading, as an alternative to the date the shipment is picked up or accepted by the carrier. For a hazardous waste, the transport document copy must be retained for three years after the waste material is accepted by the initial operator.</p> <p>c) The notification to pilot-in-command must list, and provide the required information for, those additional materials considered to be dangerous goods under United States' regulations as indicated through United States variations.</p> <p>d) Except for "Other Regulated Materials" as defined in 49 CFR 173.144, substances of Class 9, radioactive material, aircraft batteries transported as items of replacement, and those articles and substances considered to be dangerous goods under these Technical Instructions but which are not subject to 49 CFR Parts 170-180, the following limitations apply:</p> <p>No more than 25 kg net weight of dangerous goods, and in addition thereto, 75 kg net weight of non-flammable gas, that are permitted to be carried aboard a passenger aircraft may be carried aboard an aircraft:</p> <ol style="list-style-type: none"> <li>1) in an inaccessible cargo compartment;</li> <li>2) in any freight container within an accessible cargo compartment; or</li> <li>3) in any accessible cargo compartment of a cargo aircraft if the dangerous goods are loaded so as to be inaccessible unless in a freight container.</li> </ol> <p>For transport by cargo aircraft, the following additional substances are also excepted from this variation:</p> <ol style="list-style-type: none"> <li>1) Division 6.1 (poisonous) materials (except those labelled FLAMMABLE);</li> <li>2) Materials in Division 6.2 (etiologic or infectious substances);</li> <li>3) Class 3 (flammable liquid) materials with a flashpoint above 23°C (73°F) that do not meet the definition of another hazard class.</li> </ol>	<p>7;1</p> <p>7;1</p> <p>7;4.1.1</p>

≠	US 15	Except as provided for cylinders of compressed oxygen, no person may load or transport to, from or within the United States a package containing a dangerous good requiring an OXIDIZER label in an inaccessible cargo compartment that is not equipped with a fire or smoke detection system and a fire suppression system.	Table 3-1 PI 200 7;2 7;4.1
---	-------	--	-------------------------------------

Cylinders of compressed oxygen must be transported in accordance with the following:

- a) No more than a combined total of six cylinders of compressed oxygen per aircraft may be stowed in cargo compartments not equipped with a fire or smoke detection system and a fire suppression system;

Identifying code	Variation	Relevant paragraphs
	<p>b) Except for oxygen cylinders allowed to be transported in the passenger compartment under the conditions given below, oxygen cylinders transported on passenger aircraft or in an inaccessible cargo location on a cargo aircraft must be stowed horizontally as close as practicable to the floor of the cargo compartment or unit load device;</p> <p>c) When transported in a Category B compartment or its equivalent (i.e. an accessible compartment equipped with a fire detection system), cylinders of compressed oxygen must be loaded in a manner that a crew member can see, handle and, when size and weight permit, separate the cylinders from other cargo during flight. No more than six cylinders of compressed oxygen and, in addition, one cylinder of medical-use compressed oxygen per passenger needing oxygen at destination — with a rated capacity of 1 000 L (34 cubic feet) or less of oxygen — may be carried in a Class B aircraft cargo compartment or its equivalent; and</p> <p>d) Each cylinder must conform to the requirements identified in US Variation 6 and when loaded into a passenger-carrying aircraft or in an inaccessible cargo location of a cargo-only aircraft, must be placed in an overpack or outer packaging that conforms to the performance criteria of Air Transport Association (ATA) Specification 300 for Category I shipping containers.</p>	
	<p>A cylinder containing medical-use compressed oxygen, owned or leased by an aircraft operator or offered for transportation by a passenger needing it for personal medical use at destination, may be carried in the cabin of a passenger aircraft in accordance with the following provisions:</p> <p>a) No more than six cylinders belonging to the aircraft operator and, in addition, no more than one cylinder per passenger needing the oxygen at destination, may be transported in the cabin of the aircraft;</p> <p>b) The rated capacity of each cylinder may not exceed 1 000 L (34 cubic feet);</p> <p>c) Each cylinder must conform to the requirements identified in US Variation 6 and must be placed in an overpack or outer packaging that conforms to the performance criteria of Air Transport Association (ATA) Specification 300 for Category I or placed in a metal, plastic or wood outer packaging that conforms to a UN standard at the Packing Group I or II performance level; and</p> <p>d) Oxygen cylinders transported under these provisions must be included in the information provided to the pilot-in-command in accordance with 7;4.1 of these Instructions.</p>	8;1.1.2
≠	<p>US 16 Air bag inflators, air bag modules and seat-belt pretensioners may not be transported to, from or within the United States without prior approval by the appropriate authority of the United States (see US 1), Attention: Office of Hazardous Materials Special Permits and Approvals (PHH-30). Such approval remains valid for subsequent transport provided there is no change in its composition, design or packaging. Air bag inflators, modules and pretensioners that meet the criteria for a Division 1.4G explosive must be transported using the description “Articles, pyrotechnic for technical purposes”, UN 0431. The dangerous goods transport document (shipping papers) must contain the EX number or product code for each approved inflator, module or pretensioner in association with the basic description required in 5;4.1.4. If product codes are used, they must be traceable to the specific EX number assigned to the inflator, module or pretensioner, as applicable, by the appropriate authority of the United States. The EX number or product code is not required to be marked on the outer package.</p>	
	<p>US 17 Shippers and operators must comply with the security requirements as prescribed in Part 172, Subpart I, as applicable.</p>	1;5
+	<p>US 18 A package containing Oxygen, compressed, UN 1072, or any of the following oxidizing gases must be packaged as required by Parts 173 and 178 of 49 CFR: Compressed gas, oxidizing, n.o.s., UN 3156; Liquefied gas, oxidizing, n.o.s., UN 3157; Nitrogen trifluoride, UN 2451; and Nitrous oxide, UN 1070.</p> <p>An oxygen generator, chemical (as defined in 49 CFR 171.8) may only be transported on cargo aircraft as provided for in 49 CFR 173.168. An oxygen generator, chemical, UN 3356, is not permitted for transport on passenger aircraft unless approved by the appropriate authority of the United States (see US 1). An oxygen generator, chemical, UN 3356, that is transported with a means of initiation attached must be classed and approved by the appropriate authority of the United States (see US 1) in accordance with the procedures specified in 49 CFR 173.56. This includes oxygen generators installed in personal breathing equipment transported in accordance with Special Provision A144 of these Instructions.</p>

International Civil Aviation Organization  
999 University Street  
Montreal, Quebec  
CANADA H3C 5H7

E-MAIL: krooney@icao.int

\_\_\_\_\_ (State) wishes the following variation(s) to be included in the Addendum to the 2009-2010 Edition of the Technical Instructions:

*Variation*

*Relevant paragraphs*

\_\_\_\_\_ Signature

\_\_\_\_\_ Title

(To be returned to reach ICAO not later than 17 April 2009)

\_\_\_\_\_

## Chapter 2

### VARIATIONS NOTIFIED BY AIRLINE OPERATORS

2.1 It is hoped that all airline operators will abide completely by the requirements of the Technical Instructions and thus assist the smooth and rapid carriage of dangerous goods by air. If some special concerns or problems make it necessary for individual airlines to impose some more restrictive requirements, they are invited to notify such variations to ICAO for inclusion in this section.

≠ 2.2 Those variations which were notified to ICAO by airline operators prior to 22 July 2008 appear in Table A-2. Such variations, unless the context makes it otherwise apparent, are assumed to apply to all air transport performed by the operators concerned. Operator variations must not be less restrictive than the requirements of the Instructions and should refer only to safety matters and not to special handling or processing requirements.

≠ 2.3 If an operator needs to make variations based on new requirements appearing in this edition of the Instructions, it should notify ICAO by using the form appearing at the end of this Chapter. If such variations are received by 17 April 2009, they will appear in an Addendum to be published in May 2009.

2.4 The table of operator variations is based on data provided by the operators concerned. This table is provided for information only and should not be interpreted as having any (ICAO) regulatory status. Further information should be obtained from the appropriate airline operator.

2.5 In Table A-2 the affected Chapter(s) or paragraph(s) are indicated for each operator variation. Note that no reference to operator variations is made under the Chapter headings nor in the list of dangerous goods (Table 3-1). Variations have been notified by the following airlines:

Adria Airways — JP	+ Carpatair SA — V3
Aer Lingus — EI	≠ Carribean Airlines — BW
Aerolineas Argentinas — AR	Cathay Pacific Airways — CX
+ Aeromexico — AM	China Eastern Airlines — MU
AeroPeru — PL	China Southern — CZ
Aerovias Nacionales de Colombia S.A. (AVIANCA) — AV	China Airlines — CI
Air Algerie — AH	Comair Pty — MN
Air Austral — UU	Continental Airlines — CO
>	Continental Micronesia — CS
Air Canada Jazz — QK	COPA Airlines — Cargo — CM
Air China — CA	Corsair — SS
Air Europa — UX	Corse Méditerranée — XK
Air France — AF	Croatia Airlines — OU
Air Hong Kong — LD	Czech Airlines — OK
≠ Airkenya Express Ltd — P2	Delta Air Lines — DL
+ Air Madagascar — MD	Deutsche Lufthansa/Lufthansa Cargo AG — LH
Air Mauritius — MK	DHL Air Limited — DHL — DO
Air Namibia — SW	+ DHL Aero Expreso S.A. — D5
Air New Zealand — NZ	El Al Israel Airlines — LY
Air Niugini — PX	Emirates — EK
Air Pacific — FJ	ERA Aviation — 7H
Air Tahiti Nui — TN	+ ETIHAD Airways — EY
Air Wisconsin — ZW	EVA Airways — BR
Alaska Airlines — AS	European Air Transport — DHL — QY
Alitalia Airlines — AZ	Egyptair — MS
All Nippon Airways — NH	Federal Express — FX
American Airlines — AA	Finnair — AY
America West Airlines — HP	>
Asiana Airlines — OZ	+ Garuda Indonesia — GA
>	+ Great Wall Airlines — IJ
Austrian Airlines — OS	Gulf Air — GF
Bangkok Airways — PG	Hapag-Lloyd Flug GmbH — HF
Biman Bangladesh Airlines — BG	Hawaiian Airlines — HA
bmi — BD	Hong Kong Dragon Airlines (Dragonair) — KA
British Airways — BA	IBERIA, Líneas Aéreas de España — IB
>	Iberworld Airlines — TY
Brussels Airlines — SN	Indian Airlines — IC
Cameroon Airlines — UY	Iran Air — IR
Cargolux Airlines — CV	Japan Air Lines — JL
	JAT — Yugoslav Airlines — JU

Jetstar — JQ	Skippers Aviation — JW
+ Jett8 Airlines Cargo — JX	SkyWest Airlines — OO
Kenya Airways — KQ	Southern Air — 9S
KLM, Royal Dutch Airlines/KLM Cityhopper B.V. — KL	Southern Air Transport — SJ
Korean Airlines — KE	Spanair — JK
≠ LAN Airlines — LA	Swiss International — LX
Lauda Air Luftfahrt AG — NG	TAM Linhas Aereas — JJ
Luxair — LG	Tampa Cargo — QT
Malaysia Airlines — MH	Thai Airways International — TG
Malev Hungarian Airlines — MA	Transavia Airlines C.V. — HV
Martinair Holland — MP	>
Mexicana Airlines — MX	Transportes del Mercosul — TAM — PZ
Miami Air International — GL	Tunis Air — TU
Middle East Airlines — ME	Turkish Airlines — TK
Nippon Cargo Airlines — KZ	United Airlines — UA
Northwest Airlines — NW	United Parcel Service — 5X
Philippine Airlines — PR	USAfrica Airways — E8
Qantas Airways — QF	US Airways — US

**Table A-2. Operator variations**

The identifying code for each operator variation consists of a two- or three-character identifier for that operator plus a sequential number. Variations are listed in the alphabetical order of these identifying codes. For each variation, the relevant Part and Chapter or paragraph numbers of the Instructions are given.

*Note.— Unless otherwise indicated, references cited within the text of the operator variations refer to the IATA Dangerous Goods Regulations.*

Identifying code	Variation	Relevant paragraphs
<b>AA — AMERICAN AIRLINES</b>		
AA-01	Substances with a primary or subsidiary risk of Division 6.1 will not be accepted for carriage.	2;6
AA-02	Hazardous waste in any form, as defined by any regulation, will not be accepted for carriage.	
AA-03	Mercurial barometers will not be accepted for carriage as carry-on or checked baggage.	8;1
AA-04	Salvage packagings will not be accepted for carriage.	4;1.4
<b>AC — AIR CANADA</b>		
≠ AC-01	Not used.	
≠ AC-02	Dangerous goods packaged, labelled, marked and in quantities acceptable on both passenger and cargo aircraft must not be included in the same shipper's declaration as goods acceptable solely on "cargo aircraft only", though they may be part of the same consignment.	5;4
AC-03	Not used.	
<b>AF — AIR FRANCE</b>		
≠ AF-01	The following dangerous goods will not be accepted for carriage (see packing instructions [-] listed after each substance): a) all explosive articles classified in Division 1.1 and 1.2.	Table 3-1

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
	<p>b) Division 4.3, UN 3132 — Water-reactive solid, flammable, n.o.s. [411, 415, Y415, 417, 419, Y419, 420] and UN 3135 — Water-reactive solid, self-heating, n.o.s. [411, 415, 417, 419 and 420].</p> <p>c) Class 8, UN 1798 — Nitrohydrochloric acid [809].</p>	
≠	<p>AF-02 Infectious substances, patient specimens, diagnostic specimens, clinical specimens and biological substances (human or animal) will only be accepted if assigned to UN 2814 or UN 2900, as appropriate.</p> <p>The only exceptions to this variation are:</p> <ul style="list-style-type: none"> <li>— dried blood spots, collected by applying a drop of blood onto absorbent material;</li> <li>— pathogen-free blood or blood components collected for transfusion or for the preparation of blood products to be used for human or animal transfusion or transplantation;</li> <li>— any tissues or organs intended for use in human or animal transplantation.</li> </ul> <p>In these cases, the air waybill must bear a detailed description to enable identification as non-regulated material.</p>	2;6 Table 3-1 5;4
≠	<p>AF-03 Prior Air France approval is required for transport of dangerous goods under appropriate National Authorities' exemptions or approvals.</p>	
<b>AH — AIR ALGERIE</b>		
≠	<p>AH-01 The shipper must provide a 24-hour emergency telephone number of a person/agency who is knowledgeable of the hazards, characteristics and actions to be taken in case of an accident or incident concerning (each of) the dangerous goods being transported. This telephone number, including country and area code, preceded by the words "Emergency contact" or "24-hour number" must be inserted on the shipper's declaration for dangerous goods (DGD) preferably in the "Additional handling information" box, e.g. "Emergency contact +47 67 50 00 00".</p> <p>A 24-hour emergency telephone number is not required for shipments that do not require a DGD.</p>	5;4
	<p>AH-02 Class 1 — Explosives. Due to the requirements of the Algerian Civil Aviation Authority, shippers must obtain prior approval from Air Algeria for all explosives, including ammunition in passenger baggage, transported to, from or through Algeria. The request must be submitted at least five (5) days prior to shipment or travel.</p>	2;1 8;1
<b>AM — AEROMEXICO</b>		
+	<p>AM-01 Class 1 — Explosives will not be accepted for carriage, except for Class 1.4S (and Cartridges, power device (UN 0323) as COMAT). (See subsection 5.1 of the IATA Dangerous Goods Regulations.)</p>	2;1
+	<p>AM-02 Division 2.3 — Toxic gases will not be accepted for carriage (exception: COMAT parts and supplies).</p>	2;2
+	<p>AM-03 Class 3 — Flammable liquids will not be accepted for carriage, except:</p> <ul style="list-style-type: none"> <li>— when they are included in first aid kits;</li> <li>— Paint related material (UN 1263) in Packing Group III only; and</li> <li>— Perfumery products (UN 1266) in Packing Group III.</li> </ul>	2;3 Table 3-1
+	<p>AM-04 Class 4 — Flammable solids will not be accepted for carriage.</p>	2;4
+	<p>AM-05 Class 5 — Oxidizers and organic peroxides will not be accepted for carriage.</p>	2;5
+	<p>AM-06 Division 6.1 and 6.2 substances will not be accepted for carriage.</p>	2;6
+	<p>AM-07 Class 7 — Radioactive materials of Categories I, II and III will be accepted for carriage, provided the following conditions are complied with:</p>	2;7 5;4

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
	<ul style="list-style-type: none"> <li>— the radioactive materials must be for medical diagnosis or medical research or treatment; or</li> <li>— to be used in analysis for medical purposes with direct relation to human health; and</li> <li>— the total transport index (TI) in one package or in a group of packages must not exceed 3.0.</li> </ul> <p>The shipper's declaration accompanying each shipment of radioactive material of Categories I, II or III must show the following endorsement: "This radioactive material is intended for use in, or incidental to, research or medical diagnosis or treatment".</p>	
+	AM-08 Class 8 — Corrosives will not be accepted for carriage (exception: COMAT parts and supplies).	2;8
+	AM-09 Class 9 — Commodities pertaining to this class will not be accepted for carriage, with the exception of the following products (exception: COMAT parts and supplies): <ul style="list-style-type: none"> <li>UN 1845 — Carbon dioxide, solid (dry ice)</li> <li>UN 2071 — Ammonium nitrate fertilizers</li> <li>UN 3072 — Life-saving appliances, not self-inflating</li> <li>UN 3166 — Engines, internal combustion, flammable liquid powered</li> <li>UN 3166 — Vehicle, flammable liquid powered</li> <li>UN 3245 — Genetically modified micro-organisms</li> <li>UN 3245 — Genetically modified organisms</li> <li>UN 3268 — Air bag modules</li> <li>UN 3268 — Seat-belt pretensioners</li> <li>UN 3316 — Chemical kit</li> <li>UN 3316 — First aid kit</li> <li>UN 3334 — Aviation regulated liquid, n.o.s.</li> <li>UN 3335 — Aviation regulated solid, n.o.s.</li> <li>UN 3363 — Dangerous goods in apparatus</li> <li>UN 3363 — Dangerous goods in machinery</li> <li>ID 8000 — Consumer commodity.</li> </ul>	2;9 Table 3-1
+	AM-10 Infected animals, dead or alive, will not be accepted for carriage.	2;6
+	AM-11 Dangerous goods in excepted quantities will not be accepted for carriage (see 2.7 of the IATA Dangerous Goods Regulation).	3;5
+	AM-12 Genetically modified micro-organisms and organisms must not cause a risk to humans, animals or plants.	2;6
>		
	<b>AR — AEROLINEAS ARGENTINAS</b>	
	AR-01 Dangerous goods in excepted quantities will not be accepted.	3;5
	<b>AS — ALASKA AIRLINES</b>	
	AS-01 Any device known as an oxygen generator (e.g. Oxygen generator, chemical; 5.1; UN 3356; PG II) will not be accepted for carriage, either via passenger or cargo aircraft.	2;5 Table 3-1
	AS-02 Division 6.1 — No substance required to bear a "Toxic" label will be accepted for carriage.	2;6 Table 3-1 5;3
	AS-03 Division 2.3 — No substance required to bear a "Toxic gas" label will be accepted for carriage.	2;3 Table 3-1 5;3
	AS-04 For cargo aircraft only, Class 7 radioactive material will only be accepted in passenger aircraft quantities (total of 50 TI per aircraft and a maximum of 3 TI per package or overpack).	2;7 7;2.9
	AS-05 Class 8 — The following Class 8 corrosive substance will not be accepted for carriage (see packing instruction [–] listed after the substance): <ul style="list-style-type: none"> <li>UN 1787 — Hydriodic acid [809, Y809, 813, 819, Y819 and 821].</li> </ul>	2;8 Table 3-1

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
AS-06	Class 9 — The following miscellaneous dangerous goods will not be accepted for carriage (see packing instruction [–] listed after the substance): UN 2211 — Polymeric beads, expandable, evolving flammable vapour [908].	2;9 Table 3-1
AS-07	Hazardous waste as defined by any regulation will not be accepted for carriage.	
AS-08	Division 6.2 — Infectious substances, will only be accepted for carriage when: — being transmitted to a medical or diagnostic facility; or — are finished biological products bearing a U.S. government licence number of manufacture; and — are intended for human or veterinary use.	2;6
AS-09	Carriers operating as code-share partners using an AS flight number may not accept dangerous goods for shipment. Contact the operating carrier for specific information.	
<b>AV — AEROVIAS NACIONALES DE COLOMBIA S.A. (AVIANCA)</b>		
AV-01	Other than explosives of Division 1.4S packed for passenger aircraft, Class 1 — Explosives will not be accepted for carriage.	2;1
AV-02	Not used.	
+	AV-03 Hazardous waste in any form, as defined by any regulation, will not be accepted for carriage.	
+	AV-04 Division 2.3 — Toxic gases will not be accepted for carriage.	2;2
+	AV-05 Wheelchairs with spillable batteries will be accepted only when the battery is removed from the wheelchair and packaged as outlined in paragraphs 2.3.2.4 and 9.3.15 of the IATA Dangerous Goods Regulations.	8;1
+	AV-06 Oxygen, compressed, UN 1072, with a 5.1 subsidiary hazard, required by passengers for medical use, will not be accepted for carriage. Avianca will provide the oxygen cylinders with prior booking.)	8;1
+	AV-07 Dangerous goods including infectious substances, biological products and radioactive material are not accepted for carriage in mail. (See 2.4 and 10.2.2 of the IATA Dangerous Goods Regulations.)	1;2,3
+	AV-08 Class 7 — Fissile radioactive material will not be accepted for carriage. (See 10.5.15 of the IATA Dangerous Goods Regulations.)	2;7
+	AV-09 Class 7 — Radioactive material of Categories I, II and III will be accepted for carriage, provided the radioactive material is intended for medical diagnosis or treatment or medical and/or industrial research.	2;7 5;1
<b>AY — FINNAIR</b>		
≠	AY-01 For information concerning operational limitations on Finnair flights and embargoes on Finnair destinations, the local Finnair cargo office or GSA agency should be contacted in advance. Contact information can be found from <a href="http://www.finnaircargo.com">www.finnaircargo.com</a> > Customer Service > Contacts.	
≠	AY-02 Dangerous goods as defined in the IATA Dangerous Goods Regulations, including items exempted in subsection 2.4, will not be accepted in airmail. The only exception to this are patient specimens provided they meet the requirements of subsection 2.4.2(b).	1;2,3
+	AY-03 In case of shipments transported under State exemptions or approvals (e.g. required by Special Provision A1, A2, A106 or A109), Cargo Traffic Center must be contacted and copies of the DGD and approval or exemption, as applicable, must be provided by fax or other means. Shipments will not be accepted unless approval is granted by Cargo Traffic Center.  Finnair Cargo Traffic Center HEL-FL-AY Telephone: +358-9-818 5450 Facsimile: +358-9-818 5448 E-mail: <a href="mailto:cargotraffic-center@finnair.com">cargotraffic-center@finnair.com</a>	3;3 5;4

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
+	AY-04 Single packagings containing liquid dangerous goods are not acceptable for transport unless overpacked with, for example, a suitably sized wooden pallet to protect at least the top and bottom of the packagings.	4;1
	<b>AZ — ALITALIA AIRLINES</b>	
	AZ-01 Dangerous goods in consolidations will only be accepted for carriage where the consolidations contain only dangerous goods and must not include other non-regulated cargo.	7;1
	<b>BA — BRITISH AIRWAYS</b>	
	BA-01 UN 1169, UN 1197, UN 3334. With the exception of composite packaging, single packaging is not acceptable for liquids of concentrates or essences with strongly irritating or smelling properties, such as garlic, unless in sturdy, leakproof supplementary packaging forming an overpack for each single packaging used. The overpack must meet the marking, labelling and documentary requirements for an overpack and must bear orientation labels.	Table 3-1 4;5, 4;11 5;2, 5;3
≠	BA-02 UN 3090 — Lithium batteries. Primary (non-rechargeable) lithium (metal) batteries and cells are prohibited from carriage as cargo on passenger aircraft. (See Packing Instruction 968.)  This prohibition does not apply to: — UN 3091, UN 3480, UN 3481; — lithium batteries (rechargeable and non-rechargeable) covered by the provisions for dangerous goods carried by passengers or crew. (See Table 2.3.A of the IATA Dangerous Goods Regulations.)	Table 3-1 4;11 8;1
≠	BA-03 Infectious substances (UN 2814, UN 2900 and UN 3373) and biological products are not acceptable for carriage in mail.	1;2,3 2;6 Table 3-1
	BA-04 Hazardous waste in any form, as defined by any Regulation, will not be accepted for carriage.	5;1,1
≠	BA-05 UN 3356 — Oxygen generator, chemical, is prohibited from carriage.	2;5
	BA-06 Class 7 — Radioactive material of any kind will not be accepted for carriage.	2;7
	<b>BD — bmi</b>	
	BD-01 UN 1845 — Carbon dioxide, solid (dry ice) is restricted to 200 kg per aircraft hold.	Table 3-1 7;2
	<b>BG — BIMAN BANGLADESH AIRLINES</b>	
	BG-01 Dangerous goods in excepted quantities will not be accepted.	3;5
	<b>BR — EVA AIRWAYS</b>	
	BR-01 Dangerous goods requiring a cargo aircraft only (CAO) label will not be accepted except for: — Division 2.2 — Non-flammable, non-toxic gas without a subsidiary risk; — Class 3 — Flammable liquid, Packing Group II or III and without a subsidiary risk; and — Class 9 — Miscellaneous dangerous goods.	Table 3-1 5;3
	BR-02 Dangerous goods in Packing Group I will not be accepted.	Table 3-1
	BR-03 Other than explosives of Division 1.4S, Class 1 — Explosives will not be accepted for carriage.	2;1

Identifying code	Variation	Relevant paragraphs
	BR-04 Dangerous goods in excepted quantities will not be accepted for carriage.	3;5
≠	BR-05 Dangerous goods as defined in the IATA Dangerous Goods Regulations will not be accepted in airmail.	1;2,3
≠	BR-06 Dangerous goods in consolidations will not be accepted for carriage, except for: <ul style="list-style-type: none"> <li>— consolidations having one master air waybill with one house air waybill; or</li> <li>— consolidations having multi house air waybill containing ID 8000 (consumer commodity) and/or UN 1266 (Perfumery products) and/or UN 2807 (Magnetized material); or</li> <li>— consolidations having multi house air waybill containing ID 8000 (consumer commodity) and/or UN 1266 (Perfumery products) and/or UN 2807 (Magnetized material) including other general cargo; or</li> <li>— consolidations having multi house air waybill containing UN 1845 (Carbon dioxide, solid/dry ice) when used as a refrigerant for non-dangerous goods.</li> </ul>	7;1
≠	BR-07 Dangerous goods shipments transhipped to/from other operators will not be accepted for carriage, with the exception of UN 2807 (Magnetized material) and some class(es) or division(s) provided prior approval from Eva Air Headquarters has been obtained.	Table 3-1
≠	BR-08 UN 3356 — Oxygen generator, chemical, will not be accepted for carriage. <i>Note.— Items from EVA's COMAT materials and EGAT'S AOG materials which are listed in subsection 4.2 of the IATA Dangerous Goods Regulations will be exempted from the applicability of BR-01, BR-02, BR-03, BR-08 and BR-15.</i>	2;5 Table 3-1
≠	BR-09 Division 2.1 — Flammable gas. The following flammable gases will not be accepted for carriage (see packing instructions [-] listed after the substance): UN 1057 — Lighters, disposable lighter with high tensile nylon or plastic body [201].	2;2 Table 3-1
	BR-10 Division 2.3 — Toxic gases will not be accepted.	2;2
	BR-11 Class 7 — Radioactive material, Category II-Yellow, III-Yellow, fissile material and excepted packages will not be accepted.	1;6,2 7;5,1
	BR-12 Class 8 — Corrosives. The following corrosives will not be accepted for carriage (see packing instructions [-] listed after each substance): UN 1787 — Hydriodic acid [809, Y809, 813, 819, Y819, 821] UN 2803 — Gallium [804].	2;8 Table 3-1
	BR-13 Class 9 — Miscellaneous dangerous goods. The following goods will not be accepted (see packing instructions [-] listed after the substance): UN 2211 — Polymeric beads, expandable, evolving flammable vapour [908].	2;9 Table 3-1
≠	BR-14 Division 6.2 — Infectious substances in Category A must be loaded on a cargo aircraft.	2;6 7;2
≠	BR-15 Dangerous goods with final destinations EVA Air does not serve with their own aircraft (off-line station) can be accepted on board BR flights when advance arrangements have been made by reservation staff of the origin station in regard to the trucking to final destination. <i>Note.— The restrictions list in all EVA variations do not apply to materials for R.O.C Military Logistic Command.</i>	
	BR-16 Dangerous goods are not accepted to load on MD90 aircraft, except for: UN 1845 — Carbon dioxide, solid/dry ice which is used as a refrigerant for non-dangerous goods.	Table 3-1 7;2
<b>BW —CARIBBEAN AIRLINES</b>		
≠	BW-01 Caribbean Airlines will not accept for carriage on its aircraft substances with a primary or subsidiary risk of 6.1 in any form.	2;6 Table 3-1

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
<b>CA — AIR CHINA</b>		
CA-01	Dangerous goods in consolidations will not be accepted for carriage, except for: <ul style="list-style-type: none"> <li>— consolidations containing UN 1845 — Carbon dioxide, solid (dry ice) when used as a refrigerant; and</li> <li>— consolidations with only one house air waybill.</li> </ul>	7;1
CA-02	Not used.	
≠ CA-03	Not used.	
CA-04	Sufficient absorbent material to absorb the contents of all inner packagings must be used for combination packagings containing corrosive liquid in Packing Groups I, II and III.	4;1
≠ CA-05	The telephone or facsimile number of the consignee must be shown on the air waybill.	5;4
CA-06	Dangerous goods originating from China will not be accepted for carriage in airmail, except for radioactive material in excepted packages which meet the requirement of 2.4.1 in these regulations.	1;2.3, 1;6
CA-07	Dangerous goods in excepted quantities originating from China will not be accepted, except for radioactive material in excepted packages.	1;6 3;5
CA-08	Cold storage for dangerous goods is not available, except for carbon dioxide, solid (dry ice) when used as a refrigerant.	
CA-09	Fireworks originating from China will not be accepted for carriage.	
<b>CI — CHINA AIRLINES</b>		
CI-01	No consignment of dangerous goods as shown in these Instructions will be accepted for carriage by China Airlines on its international passenger flights and domestic flights, with the exception of Class 9 and AOG (excluding oxygen generators).	Table 3-1
CI-02	Dangerous goods in excepted quantities will not be accepted.	3;5
CI-03	Dangerous goods in consolidations will not be accepted for carriage except for: <ul style="list-style-type: none"> <li>— consolidations having one master air waybill with one house air waybill; or</li> <li>— consolidations having multiple house air waybills containing ID 8000 — consumer commodity; or</li> <li>— consolidations having multiple house air waybills containing UN 1266 — Perfumery products; or</li> <li>— consolidations having multiple house air waybills containing ID 8000 and/or UN 1266 mixed with general cargo.</li> </ul>	7;1
CI-04	Any liquid dangerous goods having primary hazard or subsidiary hazard of Class 8 — Corrosives must be packed in combination packaging.	2;8 Table 3-1 4;1
<b>CM — COPA AIRLINES — CARGO</b>		
CM-01	Explosives will not be accepted for carriage (excepted: Explosives of Division 1.4S packed on passenger aircraft).	2;1 Table 3-1
CM-02	Division 2.1 — Flammable gas will not be accepted for carriage.	2;2 Table 3-1
CM-03	Oxidizers and organic peroxides will not be accepted for a primary or subsidiary risk (excepted: UN 1072 — Oxygen compressed, with a subsidiary hazard).	2;5 Table 3-1
CM-04	Radioactive material will not be accepted for carriage.	2;7 Table 3-1

<b>CO — CONTINENTAL AIRLINES</b>		
CO-01	Class 1 — Explosives will not be accepted for carriage (exception: COMAT parts and supplies). (See Packing Instructions 101 to 143.)	2;1 Table 3-1
CO-02	Division 2.1 — Flammable gases will not be accepted for carriage (exception: COMAT parts and supplies). (See Packing Instructions 200 to 214.)	2;2 Table 3-1
≠ CO-03	All liquid dangerous goods, in all classes and divisions, must be packed in combination packagings. Single packagings are not allowed. An overpack, by definition, is not a combination packaging. (See definitions in 1;3.)	1;3 4;1
CO-04	Class 4 — Division 4.1 — Flammable solids; Division 4.2 — Substances liable to spontaneous combustion; Division 4.3 — Substances which, in contact with water, emit flammable gases will not be accepted for carriage as a primary or subsidiary risk (exception: COMAT parts and supplies). (See Packing Instructions 400 to Y434.)	2;4 Table 3-1
≠ CO-05	Class 5 — Division 5.1 — Oxidizers and Division 5.2 — Organic peroxides will not be accepted for carriage as a primary or subsidiary risk (exception: Oxygen, compressed, UN 1072, with a 5.1 subsidiary hazard and COMAT parts and supplies with a primary or subsidiary risk of Division 5.1 or 5.2). (See Packing Instructions 500 to 523.)	2;5 Table 3-1
CO-06	Division 6.1 — Toxic substances will not be accepted for carriage as a primary or subsidiary risk. (See all 600 series Packing Instructions except 602, 622 and 650.)	2;6 Table 3-1
≠ CO-07	Division 6.2 — Infectious substances, Category A and B (UN 2814, UN 2900 and UN 3373), other than substances transmitted to laboratories for diagnostic purposes or finished biological products bearing the U.S. government licence number of manufacture and intended for human or veterinary use, will not be accepted for carriage.  For exempt patient specimens (human or animal), a rigid outer package must be used. (See 3.6.2 of the IATA Dangerous Goods Regulations and Packing Instructions 602, 622 and 650.)	2;6 Table 3-1
CO-08	All international and domestic shipments of dangerous goods requiring a DGD, including interline shipments and COMAT parts and supplies, as defined by the IATA Dangerous Goods Regulations, must be booked. United States and Canadian locations must contact the Continental Airlines' Customer Service Center for reservations (281-553-5050 or 1-800-421-2456) (SITA address: IAHFCCO). International locations must call the local cargo station. (See 1.3.2 and 9.1.1 of the IATA Dangerous Goods Regulations.)	5;1, 5;4
≠ CO-9	The carriage of UN 1845 — Carbon dioxide, solid (dry ice) will be limited to the following established limits:  — all narrow-body aircraft (B737, B757, ERJ) — 114 kg (250 lb) per aircraft;  — all wide-body aircraft (B767, B777) — 200 kg (440 lb) per aircraft.  Exception: Due to the limited sublimation rate of dry ice when carried in "refrigerated/insulated" containers, the following quantities of dry ice may be carried in any containers with carrier code "PC" or any containers with a prefix code beginning with "R":  B777-200 — 1,088 kg (2,400 lb); B767-400 — 816 kg (1,800 lb); B767-200 — 635 kg (1,400 lb); B757-200 — 590 kg (1,300 lb); B757-300 — 725 kg (1,600 lb); or B737-(all series) — 430 kg (950 lb).  The above container limitations are per aircraft. (See 9.3.12 of the IATA Dangerous Goods Regulations and Packing Instruction 904.)  All domestic and international shipments containing Carbon dioxide, solid (dry ice), UN 1845, must have a Class 9 label affixed to the package.	2;9 Table 3-1 5;3 7;2.11
≠ CO-10	In addition to the forbidden items in the State Variations and 4.2 (List of Dangerous Goods) of the IATA Dangerous Goods Regulations, the following substances are forbidden for transport on Continental Airlines:	Table 3-1 4;11

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
	UN 3090 — Lithium batteries. Primary (non-rechargeable) lithium (metal) batteries and cells are prohibited from carriage as cargo. (See Packing Instruction 968.) This prohibition does not apply to: <ul style="list-style-type: none"> <li>— UN 3091, UN 3480, UN 3481;</li> <li>— lithium batteries (rechargeable and non-rechargeable) covered by the provisions for dangerous goods carried by passengers or crew. (See Table 2.3.A of the IATA Dangerous Goods Regulations.)</li> </ul>	8;1
+	CO-11 Continental Airlines will not prepare, insert or amend the handling information section and/or the nature and quantity of goods section on an air waybill for dangerous goods which are listed in subsection 4.2 (List of Dangerous Goods) in the current IATA Dangerous Goods Regulations.	Table 3-1 5;4
<b>CS — CONTINENTAL MICRONESIA</b>		
≠	CS-01 Class 1 — Explosives will not be accepted for carriage (exception: COMAT parts and supplies). (See Packing Instructions 101 to 143.)	2;1 Table 3-1 4;3

MH-18	The carriage of Class 7 — Radioactive material is subject to the following limitations: <ul style="list-style-type: none"> <li>— maximum of 3.0 TI per package on passenger aircraft;</li> <li>— maximum 3.0 total sum of TI per narrow-body passenger aircraft;</li> <li>— maximum 25.0 total sum of TI per wide-body passenger aircraft; and</li> <li>— maximum 50.0 total sum of TI per cargo aircraft.</li> </ul>	2;7 7;2
<b>MK — AIR MAURITIUS</b>		
MK-01	Class 7 — Radioactive material of categories White-I, Yellow-II and Yellow-III will be accepted for carriage provided the following conditions are complied with: <ul style="list-style-type: none"> <li>— the radioactive material must be for medical diagnosis or medical research or treatment; or</li> <li>— to be used in analysis for medical purposes with direct relation to human health; and</li> <li>— the total transport index (TI) in one package or in group of packages must not exceed 3.0.</li> </ul> <p>The shipper's declaration accompanying each shipment of radioactive material of categories White-I, Yellow-II or Yellow-III must show the following endorsement: "This radioactive material is intended for use in, or incidental to, medical research, diagnosis or treatment".</p>	5;1, 5;4
MK-02	Fireworks will not be accepted for carriage.	Table 3-1
≠ MK-03	Class 1 — Explosives will not be accepted for carriage, with the exception of explosives in Division 1.4S, UN 0012 and UN 0014, packed for passenger aircraft.	2;1 Table 3-1
MK-04	Dangerous goods in excepted quantities will not be accepted for carriage.	3;5
MK-05	Shipper's declarations must be in English and typewritten or computer-generated. Handwritten forms will not be accepted.	5;4
MK-06	Dangerous goods in limited quantities ("Y" packing instructions) will only be accepted for carriage under advance arrangement with the local MK Cargo Office.	3;4
+ MK-07	Infectious substances and biological products will not be accepted for carriage in airmail.	1;2,3 2;6
+ MK-08	The shipper must provide a 24-hour emergency telephone number of a person/agency who is knowledgeable of the hazards, characteristics and actions to be taken in case of an accident or incident concerning (each of) the dangerous goods being transported. This telephone number, including country and area code, preceded by the words "Emergency contact" or "24-hour number" must be inserted on the shipper's declaration for dangerous goods (DGD) preferably in the "Additional handling information" box.	5;4
+ MK-09	The telephone number of the consignee must be shown on the air waybill.	5;4
+ MK-10	All hazard labels must include text indicating the nature of the risk. This text must appear prominently in English in the lower half of the label in addition to the class or division number or compatibility group as described in 7.2.2.4 of the IATA Dangerous Goods Regulations. This will be mandatory as from January 2010.	5;3
+ MK-11	Single packagings are not acceptable for liquids of concentrates or essences with strongly irritating or smelling properties unless in sturdy, leakproof supplementary packaging forming an overpack for each single packaging used. The overpack must meet the marking, labelling and documentary requirements for an overpack and must bear orientation labels.	4;1 5;1, 5;2, 5;3
+ MK-12	Dangerous goods in single packagings of UN specification 1A1, steel drums and 3A1, steel jerricans will not be accepted unless overpacked with, for example, suitably-sized wooden pallets to protect at least the top and bottom of the packaging.	6;1

<b>MX — MEXICANA AIRLINES</b>		
MX-01	Other than Cartridges for small arms, UN 0012, and Cartridges for weapons, blank, UN 0014 (and Cartridges, power device, UN 0323, as COMAT), Class 1 — Explosives will not be accepted for carriage.	2;1 Table 3-1
MX-02	Class 2 — Gases will not be accepted for carriage, except nitrogen refrigerated liquid when used as refrigerant for medical shipments (exception: COMAT parts and supplies).	2;2 Table 3-1
MX-03	Class 3 — Flammable liquids will not be accepted for carriage, except when included in first aid kits (exception: COMAT parts and supplies).	2;3 Table 3-1
MX-04	Class 4 — Flammable solids will not be accepted for carriage.	2;4 Table 3-1
MX-05	Class 5 — Oxidizer and organic peroxides will not be accepted for carriage.	2;5 Table 3-1
MX-06	Class 6 — Toxic substances of Division 6.1 will not be accepted for carriage. Infectious substances of Division 6.2 will not be accepted for carriage, except when they are used for medical purposes.	2;6 Table 3-1
MX-07	Class 7 — Radioactive material of Categories I, II and III will be accepted for carriage, provided the following conditions are complied with: <ul style="list-style-type: none"> <li>— the radioactive material must be for medical diagnosis, or medical research or treatment; or</li> <li>— to be used in analysis for medical purposes with direct relation to human health; and</li> <li>— the total transport index (TI) in one package or in a group of packages must not exceed 3.0.</li> </ul> <p>The shipper's declaration accompanying each shipment of radioactive material of Categories I, II or III must show the following endorsement: "This radioactive material is intended for use in, or incidental to, research or medical diagnosis or treatment."</p>	2;7 Table 3-1 5;4
MX-08	Except for batteries when part of a battery-powered wheelchair or mobility aid, Class 8, Corrosives, will not be accepted (exception: COMAT parts and supplies).	2;8 Table 3-1
MX-09	Class 9 — Commodities pertaining to this class will not be accepted for carriage, with the exception of the following products (exception: COMAT parts and supplies): <ul style="list-style-type: none"> <li>— consumer commodities;</li> <li>— carbon dioxide, solid (dry ice);</li> <li>— magnetized material; and</li> <li>— engines internal combustion.</li> </ul>	2;9 Table 3-1
MX-10	An emergency response contact number provided by the shipper must be inserted in the "Additional handling information" box of the shipper's declaration for dangerous goods. This number must include the country and area codes.	5;4
MX-11	Infected animals, dead or alive, will not be accepted for carriage.	2;6 Table 3-1
MX-12	Dangerous goods in excepted quantities will not be accepted for carriage.	3;5
<b>NG — LAUDA AIR LUFTFAHRT AG</b>		
NG-01	Booking and confirmation are required for all dangerous goods shipments as defined in the IATA Dangerous Goods Regulations.	
<b>NH — ALL NIPPON AIRWAYS</b>		
NH-01	Advance arrangements must be made for all shipments of dangerous goods as defined in these Instructions.	
≠ NH-02	Radioactive material will not be accepted for carriage unless the radioactive material is intended for use in, or incidental to, research or medical diagnosis or treatment, and shipment approval confirming such purposes has been obtained.	2;7 Table 3-1

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
≠	NH-03 Type B(U), Type B(M), Type C, fissile material packages, SCO and LSA material in industrial packagings will not be accepted for carriage.	2;7 5;1.1
≠	NH-04 Dangerous goods in consolidations will not be accepted for carriage except for the following shipments: <ul style="list-style-type: none"> <li>— consolidations having one master air waybill with one house air waybill;</li> <li>— consolidations containing UN 1845 — Carbon dioxide, solid (dry ice) when used as a refrigerant;</li> <li>— consolidations containing dangerous goods in excepted quantities and/or radioactive material, excepted package.</li> </ul>	7;1
≠	NH-05 Dangerous goods in salvage packagings will not be accepted for carriage.	4;1
≠	NH-06 Dangerous goods packed in single metal packagings (1A1, 1A2, 1B1, 1B2, 3A1, 3A2, 3B1 and 3B2) are not acceptable for carriage unless an overpack is used.	6;1
<b>NW — NORTHWEST AIRLINES</b>		
NW-01	Commercially offered dangerous goods shipments may be accepted by Northwest Airlines Cargo except as noted in NW-02. All dangerous goods shipments require advance arrangements and are subject to route (origin and destination) restrictions. Some routes may require ground transportation on a portion of the routing. For a list of all approved routes, see <a href="http://www.cargo.nwa.com">www.cargo.nwa.com</a> .	
NW-02	Shipments bearing a toxic gas label (Division 2.3) will not be accepted for carriage under any circumstances.	Table 3-1 5;3.
NW-03	All packed in one (APIO) packages containing both a “hydroxide” and an “acid” in the proper shipping name or technical name must be accompanied by the following, signed, statement of safety from the shipper: <p style="margin-left: 40px;">This shipment complies with 5.0.2.11. The acid and hydroxide, if mixed, will not react dangerously.</p> <p style="margin-left: 40px;">This statement must appear in the “Additional handling information” area of the shipper’s declaration for dangerous goods and be signed by the same person who signs the completed shipper’s declaration.</p>	Table 3-1 5;4
NW-04	Dangerous goods packages marked, labelled and in quantities acceptable on both passenger and cargo aircraft must not be included on the same shipper’s declaration for dangerous goods as “cargo aircraft only” dangerous goods. Separate shipper’s declarations must be provided even though they may be part of the same consignment.	5;4
+	NW-05 Dangerous goods packaged as an all packed in one (APIO) contained within an overpack will not be accepted.	
≠	NW-06 UN 3090 — Lithium batteries. Primary (non-rechargeable) lithium (metal) batteries and cells are prohibited from carriage as cargo unless consigned as cargo aircraft only (CAO) consignments. (See Packing Instruction 968.) <p style="margin-left: 20px;">This prohibition does not apply to:</p> <ul style="list-style-type: none"> <li>— UN 3091, UN 3480, UN 3481;</li> <li>— lithium batteries (rechargeable and non-rechargeable) covered by the provisions for dangerous goods carried by passengers or crew. (See Table 2.3.A of the IATA Dangerous Goods Regulations.)</li> </ul>	Table 3-1 4;11 8;1
<b>NZ — AIR NEW ZEALAND</b>		
NZ-01	Passengers and crew are not permitted to bring book matches onto aircraft for personal use. Book matches are only allowed as correctly packed and declared dangerous goods consignments.	8;1

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
<b>OK — CZECH AIRLINES</b>		
OK-01	Dangerous goods as defined in these Instructions will not be accepted in airmail.	1;2;3
OK-02	Not used.	
OK-03	Fissile radioactive material will not be accepted for carriage.	2;7 Table 3-1
≠ OK-04	Liquid dangerous goods packed in single metal packagings (1A1, 1A2, 1B1, 1B2) will not be accepted unless safely overpacked to protect the base of the packaging. (See 5.0.1.5 of the IATA Dangerous Goods Regulations.)	4;1 6;1
≠ OK-05	Small oxygen cylinders containing gaseous oxygen or air required for medical use are not permitted on the person or in checked or carry-on baggage. Czech Airlines provides oxygen cylinders at the request of passengers at the time of booking, but at least 48 hours in advance.	8;1
<b>OO — SKYWEST AIRLINES</b>		
OO-01	Commercial shipments of dangerous goods are limited only to UN 3373 — Category B infectious substances. UN 3373 will be accepted subject to the following criteria: <ul style="list-style-type: none"> <li>— appropriate dry ice packaging requirements are followed;</li> <li>— each package must be labelled that DRY ICE is present;</li> <li>— maximum quantity per package must not exceed 4 kg for solids and 4 L for liquids.</li> </ul>	2;6 Table 3-1 4;11
<b>OS — AUSTRIAN AIRLINES</b>		
OS-01	Booking and confirmation is required for all dangerous goods shipments as defined in these Instructions.	
OS-02	Wheelchairs or other battery-powered mobility devices with spillable batteries will not be accepted for carriage as checked or carry-on baggage.	8;1
+ OS-03	Not used.	
+ OS-04	Infectious substances, UN 2814, UN 2900 and UN 3373, will not be accepted in airmail.	1;2;3 Table 3-1
<b>OU — CROATIA AIRLINES</b>		
OU-01	Advance arrangements must be made for all shipments of dangerous goods as defined in the IATA Dangerous Goods Regulations. (See 1.3.2 and 9.1.1.)	
OU-02	Small gaseous oxygen or air cylinders required for medical use will only be accepted empty as checked baggage. Should a passenger require supplementary oxygen, this will be provided by the operator at a cost with prior arrangements. (See 2.3.4.1 of the IATA Dangerous Goods Regulations.)	8;1
OU-03	Wheelchairs or other battery-powered mobility devices with spillable batteries will not be accepted for carriage. (See 2.3.2.4 and 9.3.15 of the IATA Dangerous Goods Regulations.)	8;1
OU-04	Dangerous goods in "limited quantities" ("Y" packing instructions) will not be accepted for carriage. (See 2.8 of the IATA Dangerous Goods Regulations and all Y packing instructions.)	3;4
OU-05	Dangerous goods in excepted quantities will not be accepted for carriage. (See 2.7 of the IATA Dangerous Goods Regulations.)	3;5
OU-06	Biological substances, Category B (UN 3373), will not be accepted in airmail.	1;2;3 Table 3-1
OU-07	Oxygen generators will not be accepted.	Table 3-1
OU-08	Salvage packagings will not be accepted.	4;1

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
OU-09	Class 7 — Fissile radioactive materials will not be accepted.	2;7 Table 3-1
OU-10	The shipper must provide a 24-hour emergency telephone number of a person/agency who is knowledgeable of the hazards, characteristics and actions to be taken in the case of an accident or incident concerning each of the dangerous goods being transported. This telephone number, including the country and area code, preceded by the words "Emergency contact" or "24-hour number" must be inserted in the Additional handling information box on the DGD. (See 8.1.6.11 or 10.8.3.11 of the IATA Dangerous Goods Regulations.)	5;4
OU-11	Explosives will not be accepted for carriage, except substances and articles of Division 1.4S. (See 5.1 of the Dangerous Goods Regulations.)	2;1 Table 3-1
OU-12	Infected animals, dead or alive, will not be accepted for carriage.	2;6 Table 3-1
OU-13	Dangerous goods are not accepted on ATR-42 type of aircraft, except dry ice in limited quantities as a refrigerant for perishable goods.	7;1, 7;2
OU-14	Dangerous goods in consolidations will not be accepted for carriage, except for UN 1845, Carbon dioxide, solid (dry ice) when used as a refrigerant. (See 8.1.2.4 of the IATA Dangerous Goods Regulations.)	7;1, 7;2
OU-15	Self-inflating rafts, aircraft survival kits, or evacuation slides, are limited to not more than one per aircraft, packed in accordance with Packing Instruction 905.	4;11
OU-16	Biological substances Category B, UN 3373 (human or animal) will only be accepted if assigned to UN 2814 or UN 2900 as appropriate.	2;6 Table 3-1 5;4
	<i>Note.— Biological substances, Category B (UN 3373), are not permitted for transport in checked or carry-on baggage and must not be carried on a person.</i>	
	The only exceptions to this variation are:	
	<ul style="list-style-type: none"> <li>— any tissues or organs intended for use in human or animal transplantation;</li> <li>— pathogen-free blood or blood components collected for transfusion or for the preparation of blood to be used for human or animal transfusion or transplantation.</li> </ul>	
	In these cases, the air waybill must bear a detailed description to enable identification as non-regulated material. (See Packing Instruction 602 and 8.2 of the IATA Dangerous Goods Regulations.)	
	<b>OZ — ASIANA AIRLINES</b>	
OZ-01	Advance arrangements must be made for all shipments of dangerous goods as defined in the IATA Dangerous Goods Regulations. Dangerous goods without booking will be rejected.	
≠ OZ-02	Dangerous goods in consolidations will not be accepted for carriage, except for the following shipments: <ul style="list-style-type: none"> <li>— consolidations having one master air waybill with one house air waybill;</li> <li>— consolidations containing UN 1845, Carbon dioxide, solid (dry ice) when used as a refrigerant for non-dangerous goods;</li> <li>— consolidations having only ID 8000, Consumer commodities; or</li> <li>— consolidations having the same shipper and consignee in each house air waybill.</li> </ul>	7;1
≠ OZ-03	Class 1 — Explosives are acceptable for carriage provided that prior approval has been received from Asiana Airlines. This does not apply to COMAT parts and supplies containing explosives, and small quantities of ammunition in passenger baggage permitted by 2.3.2.2 of the IATA Dangerous Goods Regulations.	2;1 Table 3-1 8;1

≠ QY-04	It is forbidden to carry weapons, munitions of war or parts of them, except with the express exemption of the national authorities. In this case, they must be carried in the aircraft in a place which is inaccessible to passengers during flight and, in the case of firearms, uncharged. Such items can only be accepted by advance arrangements with, and approval by, the Restricted Commodities Group —DHL EECC.	2;1 Table 3-1 7;2
QY-05	Radioactive and fissile material will only be accepted by advance arrangements with, and approval by, the Restricted Commodities Group — DHL EECC. The request requires the following information: UN number, isotope, activity, number/type of packaging, transport index (TI) and label.	2;7 Table 3-1
QY-06	Radioactive and fissile wastes will not be accepted for carriage.	2;7 Table 3-1
QY-07	Not used.	
QY-08	Not used.	
QY-09	The shipper must provide a 24-hour emergency telephone number of a person/agency who is knowledgeable of the hazards, characteristics and actions to be taken in the case of an accident or incident concerning each of the dangerous goods being transported. This telephone number, including the country and area code, preceded by the words "Emergency contact" or "24-hour number", must be inserted on the DGD, preferably in the "Handling information" box.  A 24-hour emergency telephone number is not required for shipments that do not require a shipper's declaration for dangerous goods.	5;4
<b>RG — VARIG AIRLINES</b>		
RG-01	The "Toxic" subsidiary risk label must be applied for all substances with a subsidiary risk of 6.1.	Table 3-1 5;3
RG-02	All combination packagings containing liquid dangerous goods must contain sufficient absorbent material to absorb the entire contents of all the inner packagings independently of packing groups.	4;1
RG-03	Dangerous goods in excepted quantities as provided for in 3;5 will not be accepted for transport on Varig Airlines.  The following dangerous goods will not be accepted for carriage on Varig Airlines:	3;5  Table 3-1
	UN 1063 — Methyl chloride [200] UN 1090 — Acetone [305, Y305, 307] UN 1155 — Ethyl ether [302, 303] UN 1294 — Toluene [305, Y305, 307] UN 1490 — Potassium permanganate [508, Y508, 511] UN 1715 — Acetic anhydride [809, Y809, 813] UN 1789 — Hydrochloric acid [809, Y809, 813] UN 1830 — Sulphuric acid with more than 51% acid [809, Y809, 813] UN 1832 — Sulphuric acid, spent [813] UN 1888 — Chloroform [610, Y610, 612] UN 2796 — Sulphuric acid with not more than 51% acid [809, Y809, 813] UN 2837 — Bisulphates aqueous solution [809, Y809, 813].	
RG-05	For international routes, reservations must be made for all shipments containing dangerous goods as defined in these Instructions.	
RG-06	Telephone number: The shipper's declaration for dangerous goods as defined in these Instructions must include a 24-hour emergency response telephone number (including area codes and international access codes).  Emergency response information: Besides the shipper's declaration for dangerous goods, all shipments containing dangerous goods must be accompanied by their respective material safety data sheets which must include at least:	5;4
	a) the description of the dangerous goods;	

<i>Identifying code</i>	<i>Variation</i>	<i>Relevant paragraphs</i>
	<ul style="list-style-type: none"> <li>b) immediate hazards to health;</li> <li>c) risks of fire or explosion;</li> <li>d) immediate precautions to be taken in the event of an accident or incident;</li> <li>e) immediate methods for handling fire;</li> <li>f) initial methods for handling spills or leaks in the absence of a fire;</li> <li>g) preliminary first aid measures.</li> </ul> <p>This requirement does not apply to shipments of carbon dioxide, solid (dry ice); battery-powered vehicles and equipment; internal combustion engines; vehicles or magnetized material. The English language must be used when international shipments are made. For domestic shipments within Brazil the Portuguese language is acceptable.</p>	
RG-07	Salvage packages will not be accepted for transportation on VARIG Airlines.	4;1
<b>RJ — ROYAL JORDANIAN</b>		
RJ-01	Advance arrangements must be made for all shipments of dangerous goods as defined in these Instructions.	
RJ-02	Dangerous goods in consolidations are accepted except Class 1 — Explosives, Class 7 — Radioactive material, Class 8 — Corrosives and items required to be shipped as “cargo aircraft only”.	7;1
<b>SJ — SOUTHERN AIR TRANSPORT</b>		
SJ-01	Prior approval is required for shipments containing mercury.	
<b>SK — SCANDINAVIAN AIRLINES SYSTEM (SAS)</b>		
≠ SK-01	<p>UN 3090 — Lithium batteries. Primary (non-rechargeable) lithium (metal) batteries and cells are prohibited from carriage as cargo. (See Packing Instruction 968.) This prohibition does not apply to:</p> <ul style="list-style-type: none"> <li>— UN 3091, UN 3480, UN 3481;</li> <li>— lithium batteries (rechargeable and non-rechargeable) covered by the provisions for dangerous goods carried by passengers or crew. (See Table 2.3.A of the IATA Dangerous Goods Regulations.)</li> </ul>	Table 3-1 4;11 8;1
SK-02	Not used.	
SK-03	Not used.	
SK-04	Single packagings containing liquid are not accepted for carriage on SAS aircraft unless overpacked by use of, for example, a suitably sized wooden pallet to protect the base of the packaging.	4;1
SK-05	Not used.	
SK-06	<p>The shipper must provide a 24-hour emergency telephone number of a person/agency who is knowledgeable of the hazards, characteristics and actions to be taken in the case of an accident or incident concerning each of the dangerous goods being transported. This telephone number, including the country and area code, preceded by the words, e.g. “Emergency contact” or “24-hour number”, must be inserted on the shipper’s declaration for dangerous goods (DGD), preferably in the “Handling information” box, e.g. “Emergency contact +47 67 50 00 00”.</p> <p>A 24-hour emergency telephone number is not required for shipments that do not require a DGD.</p>	5;4
SK-07	<p>Dangerous goods in consolidations will not be accepted for carriage, except for the following shipments:</p> <ul style="list-style-type: none"> <li>— consolidations containing UN 1845, Carbon dioxide, solid (dry ice) when used as a refrigerant;</li> </ul>	7;1

**REFORMATTED PACKING INSTRUCTIONS  
(APPLICABLE FROM 1 JANUARY 2011)**

## Reformatted packing instructions

The packing instructions have undergone an extensive review by the Dangerous Goods Panel (DGP) which will result in revisions to their design and content. The new packing instructions will become applicable on 1 January 2011; they are presented here for information purposes only. They can also be found on the ICAO packing instructions website at [www.icao.int/anb/FLS/dangerousgoods/packinginstructions](http://www.icao.int/anb/FLS/dangerousgoods/packinginstructions) along with more detailed information.

The new packing instructions use a more rational numbering system and remove many of the anomalies and inconsistencies which exist in the present system. As much as possible, they are consistent in structure and facilitate the allocation of packing instructions to substances which might be added to the dangerous goods list. Particular points of note include:

- IP codes for inner packagings have been removed from the packing instructions. This is consistent with the approach taken in the UN Model Regulations. The packing instructions contain a reference to Part 6;3.2 which describes the requirements for the different inner packagings.
- The packing instructions will retain the three numeric numbering scheme with the first number identifying the applicable class. To ensure that there is no confusion between the current packing instructions and those which are new, all new numbers have been applied. Table A-3 provides a cross reference between the existing and new packing instruction numbers listed by UN number and packing group. This list can also be downloaded from [www.icao.int/anb/FLS/dangerousgoods/packinginstructions](http://www.icao.int/anb/FLS/dangerousgoods/packinginstructions) in Excel worksheet format.
- The requirement for inner liners, which had been introduced for liquid dangerous goods, are removed from all packing instructions except those for substances in Packing Group I. This is replaced by a requirement that there must be positive means of ensuring that closures remain effective; a liner will still be required where secondary means of closure cannot be applied. This requirement is specifically identified in each packing instruction by reference to 4;1.1.4, which will be amended as follows:

1.1.4 The body and closure of any packaging must be so constructed as to be able to adequately resist the effects of temperature and vibration occurring in normal conditions of transport. Closures must be held securely, tightly and effectively in place by secondary means. Examples of such methods include: adhesive tape, friction sleeves, welding or soldering, positive locking wires, locking rings, induction heat seals and child-resistant closures. The closure device must be so designed that it is unlikely that it can be incorrectly or incompletely closed.

1.1.4.1 When secondary means of closure cannot be applied to an inner packaging containing liquids the inner packaging must be securely closed and placed in a leakproof liner and then placed in an outer packaging.

Comments on the reformatted packing instructions are welcome and should be submitted through the ICAO packing instructions website at [www.icao.int/anb/FLS/dangerousgoods/packinginstructions](http://www.icao.int/anb/FLS/dangerousgoods/packinginstructions). These will be reviewed by the DGP in October 2009 and minor amendments may be made based on this review.

## CLASS 3 — FLAMMABLE LIQUIDS

### Packing Instructions Y340 – Y344

Limited quantities  
Passenger and cargo aircraft

#### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met, including:
  - the capability of the package to pass a 1.2 m drop test;
  - a 24-hour stacking test; and
  - inner packagings for liquids must be capable of passing a pressure differential test (4;1.1.6).

Reconstituted wood (4F)		
Steel (4A)		

**Packing Instruction 372**

Cargo aircraft only for UN 3165 only

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

**ADDITIONAL PACKING REQUIREMENTS**

UN 3165 **Aircraft hydraulic power unit fuel tank** (containing a mixture of anhydrous hydrazine and methyl hydrazine) (M86 fuel) and designed for installation as complete units in aircraft are acceptable, subject to either of the following conditions:

- the unit must consist of an aluminium pressure vessel made from tubing and having welded heads. Primary containment of the fuel within this vessel must consist of a welded aluminium bladder having a maximum internal volume of 46 L. The outer vessel must have a minimum design gauge pressure of 1 275 kPa and a minimum burst gauge pressure of 2 755 kPa. Each vessel must be leak-checked during manufacture and before shipment and must be found leakproof. The complete inner unit must be securely packed in non-combustible cushioning material, such as vermiculite, in a strong outer tightly closed metal packaging which will adequately protect all fittings. Maximum quantity of fuel per unit and package is 42 L; or
- the unit must consist of an aluminium pressure vessel. Primary containment of the fuel within this vessel must consist of a welded hermetically sealed fuel compartment with an elastomeric bladder having a maximum internal volume of 46 L. The pressure vessel must have a minimum design gauge pressure of 2 860 kPa and a minimum burst gauge pressure of 5 170 kPa. Each vessel must be leak-checked during manufacture and before shipment and must be found leakproof. The complete inner unit must be securely packed in non-combustible cushioning material, such as vermiculite, in a strong outer tightly closed metal packaging which will adequately protect all fittings. Maximum quantity of fuel per unit and package is 42 L.

*Note.*— This packing instruction is the same as UN packing instruction P301.

## Packing Instruction 373

Passenger and cargo aircraft for UN 1228 (Packing Group II or III) only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

— Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

— Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS							SINGLE PACKAGINGS	
UN number and proper shipping name	Packing group	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle) — passenger	Inner packaging quantity (per receptacle) — cargo	Total quantity per package — passenger	Total quantity per package — cargo	Passenger	Cargo

## Packing Instruction Y373

Limited quantities  
Passenger and cargo aircraft for UN 1228 (Packing Group III) only

### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

— Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

— Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

— Part 3, Chapter 4 requirements must be met, including:

- the capability of the package to pass a 1.2 m drop test;
- a 24-hour stacking test; and
- inner packagings for liquids must be capable of passing a pressure differential test (4;1.1.6).

## Packing Instruction 374

Passenger and cargo aircraft for UN 3473 only

### General requirements

Part 4;1.1.1, 1.1.2 and 1.1.7 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3473 Fuel cell cartridges	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

### ADDITIONAL PACKING REQUIREMENTS

- Fuel cell cartridges must be securely cushioned in the outer packagings.
- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastic (4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)

Steel (1A2)

#### Jerricans

Steel (3A2)  
Plastics (3H2)  
Aluminium (3B2)

## Packing Instruction 375

Passenger and cargo aircraft for UN 3473 (contained in equipment) only

### General requirements

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3473 Fuel cell cartridges contained in equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

### ADDITIONAL PACKING REQUIREMENTS

- Fuel cell cartridges that are contained in equipment must be protected against short circuit and the equipment must be protected against inadvertent operation.
- Equipment must be securely cushioned in the outer packagings.
- Fuel cell systems must not charge batteries during transport.
- On passenger aircraft, each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1 or a standard approved by the appropriate authority of the State of Origin.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

**Packing Instruction 376**

Passenger and cargo aircraft for UN 3473 (packed with equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
<b>UN 3473 Fuel cell cartridges packed with equipment</b>	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus 2 spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

**CLASS 4 — FLAMMABLE SOLIDS; SUBSTANCES  
LIABLE TO SPONTANEOUS COMBUSTION;  
SUBSTANCES WHICH, IN CONTACT WITH WATER,  
EMIT FLAMMABLE GASES**

**Packing Instructions Y440 – Y443**

Limited quantities  
Passenger and cargo aircraft

**General requirements**

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

**3) Limited quantity requirements**

- Part 3, Chapter 4 requirements must be met, including:
  - the capability of the package to pass a 1.2 m drop test; and
  - a 24-hour stacking test.

Reconstituted wood	Steel	
Steel		

**Packing Instructions 445 – 446**

Passenger aircraft

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<b>COMBINATION PACKAGINGS</b>					<b>SINGLE PACKAGINGS</b>
<i>Packing instruction</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>	
—	I	Forbidden (only permitted for wetted explosives, see Packing Instruction 451)			
445	II	Glass	1.0 kg	15 kg	No
		Plastic	2.5 kg		
		Metal	2.5 kg		
		Plastic bag	1.0 kg		
446	III	Glass	5.0 kg	25 kg	No
		Plastic	10.0 kg		
		Metal	10.0 kg		
		Plastic bag	5.0 kg		

**ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS***Packing Group III*

- Packagings must meet the Packing Group II performance requirements.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)**

<i>Boxes</i>	<i>Drums</i>	<i>Jerricans</i>

Note 1.— These substances must be in lead free packagings.

**ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS**

- Packagings must be designed and constructed to prevent the loss of water or alcohol content or the content of the phlegmatizer.
- Packagings must be so constructed and closed so as to avoid an explosive over pressure or pressure build-up of more than 300 kPa (3 bar).
- The type of packaging and maximum permitted quantity per packaging are limited by the provisions of Part 2;1.5.2 and may be less than the limits shown above.
- Plastic or glass inner packagings must be packed in tightly closed metal or rigid plastic receptacles before packing in outer packagings. Inner packagings must be packed with absorbent material in sufficient quantity to absorb the contents in the event of leakage.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)**

\* These packagings are permitted only for a maximum of 600 m of film.

## Packing Instruction Y454

Limited quantities  
Passenger and cargo aircraft for UN 1324 only

### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met, including:
  - the capability of the package to pass a 1.2 m drop test; and
  - a 24-hour stacking test.

COMBINATION PACKAGINGS			SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Total quantity per package</i>	<i>Total gross mass per package</i>	
UN 1324 Films, nitrocellulose base	10 kg	30 kg	No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Each reel must be placed in a tightly closed metal can or strong cardboard or fibreboard inner packaging with cover held in place by adhesive tape or paper.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### *Boxes*

Aluminium

## Packing Instruction 455

Passenger and cargo aircraft for UN 1944 and 1945 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

2) **Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS				SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Packing conditions</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	
UN 1944 <b>Matches, safety</b> UN 1945 <b>Matches, wax 'vesta'</b>	Packaging as set out in the list of outer packagings below may be used.  <b>For a maximum of 50 books</b>  The following packaging is permitted:  Strong fibreboard carton, which is made of straw board covered with kraft paper, having a securely glued inside lining consisting of aluminium foil, at least 0.01 mm thick, the carton to have a full depth lid with all joints secured with gummed paper tape.	25 kg	100 kg	No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Matches, safety (book card or strike on box) must be of a type that will not ignite spontaneously under normal conditions of air transport and can be readily ignited by friction only by striking on the manufacturer's box, book or card.
- Matches must be tightly packed to prevent movement within the package and ignition by rubbing against an adjoining box, book or card.
- Matches must be securely wrapped in paper or foil or packed in tightly closed inner packagings.
- No more than 50 books of matches may be packed in one inner packaging.
- Packagings must meet the Packing Group II performance requirements.

## Packing Instruction 459

Passenger and cargo aircraft — self-reactive substances

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS							SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle) — passenger</i>	<i>Total quantity per package — passenger</i>	<i>Inner packaging quantity (per receptacle) — cargo</i>	<i>Total quantity per package — cargo</i>		
<b>Liquids</b>							
UN 3223	<b>Self-reactive liquid type C</b>	Plastic	0.5 L	5 L	1.0 L	10 L	No
UN 3225	<b>Self-reactive liquid type D</b>	Plastic	0.5 L	5 L	1.0 L	10 L	
UN 3227	<b>Self-reactive liquid type E</b>	Plastic	1.0 L	10 L	2.5 L	25 L

UN 3230	<b>Self-reactive solid type F</b>	Plastic	1.0 kg	10 kg	2.5 kg	25 kg	

### ADDITIONAL PACKAGING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Cushioning materials must not be readily combustible.
- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)  
Fibre (1G)  
Plastics (1H2)  
Plywood (1D)  
Steel (1A2)

#### Jerricans

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

## Packing Instruction 462 – 463

Passenger aircraft

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
Packing instruction	Packing group	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle)	Total quantity per package	
—	I	Forbidden			
462	II	Glass	1.0 L	1 L	No
		Plastic	1.0 L		
		Metal	1.0 L		
463	III	Glass	2.5 L	5 L	5 L
		Plastic	2.5 L		
		Metal	5.0 L		

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

#### Packing Group III

- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastics (1H2)  
Plywood (1D)  
Steel (1A2)

#### Jerricans

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

### ADDITIONAL PACKING REQUIREMENTS FOR SINGLE PACKAGINGS

#### Packing Group III

- Packagings must meet the Packing Group II performance requirements.

### SINGLE PACKAGINGS FOR PACKING GROUP III ONLY (PI 463)

#### Composites

All (see 6;3.1.18)

#### Cylinders

See 4;2.7

#### Drums

Plastics (1H2)  
Plywood (1D)  
Steel (1A2)

##### Jerricans

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

### ADDITIONAL PACKING REQUIREMENTS FOR SINGLE PACKAGINGS

#### Packing Group III

- Packagings must meet the Packing Group II performance requirements.

#### SINGLE PACKAGINGS FOR PACKING GROUP III ONLY (PI 465)

##### Composites

All (see 6;3.1.18)

##### Cylinders

See 4;2.7

##### Drums

Aluminium (1B1)  
Other metal (1N1)  
Plastic (1H1)  
Steel (1A1)

##### Jerricans

Aluminium (3B1)  
Plastic (3H1)  
Steel (3A1)

## Packing Instruction 466 – 469

Passenger aircraft

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
Packing instruction	Packing group	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle)	Total quantity per package	
—	I	Forbidden			
466	II	Glass	1.0 kg	15 kg	No
		Plastic	1.0 kg		
		Metal	1.0 kg

		Plastic	2.5 kg		
		Metal	2.5 kg		
		Plastic bag	1.0 kg		
468	III	Glass	2.5 kg	25 kg	No
		Plastic	2.5 kg		
		Metal	5.0 kg		
469	III	Glass	5.0 kg	25 kg	No
		Plastic	10.0 kg		
		Metal	10.0 kg		
		Plastic bag	5.0 kg		

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

#### Packing Group III

- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastics (1H2)  
Plywood (1D)  
Steel (1A2)

#### Jerricans

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

## Packing Instruction 470 – 471

Cargo aircraft only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
<i>Packing instruction</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>	
—	I	Forbidden			
470	II	Glass	2.5 kg	50 kg	50 kg
		Plastic	5.0 kg		
		Metal	5.0 kg		
		Plastic bag	2.5 kg		
471	III	Glass	5.0 kg	100 kg	100 kg
		Plastic	10.0 kg		
		Metal	10.0 kg		
		Plastic bag	5.0 kg		

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

#### *Packing Group III*

- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### *Boxes*

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### *Drums*

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastic (1H2)  
Plywood (1D)  
Steel (1A2)

#### *Jerricans*

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

### ADDITIONAL PACKING REQUIREMENTS FOR SINGLE PACKAGINGS

#### *Packing Group III*

- Packagings must meet the Packing Group II performance requirements.
- Fibre, wood and plywood single packagings must be fitted with a suitable liner.

### SINGLE PACKAGINGS

#### *Boxes*

Steel (4A)  
Aluminium (4B)  
Natural wood (4C2)  
Plywood (4D)  
Reconstituted wood (4F)  
Fibreboard (4G)  
Plastics (4H2)

#### *Composites*

All (see 6;3.1.18)

#### *Cylinders*

See 4;2.7

#### *Drums*

Aluminium (1B1, 1B2)  
Other metal (1N1, 1N2)  
Plastic (1H1, 1H2)  
Steel (1A1, 1A2)

#### *Jerricans*

Aluminium (3B1, 3B2)  
Plastic (3H1, 3H2)  
Steel (3A1, 3A2)

## Packing Instruction 472

Passenger and cargo aircraft for UN 1362 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS				SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>

#### Jerricans

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

### ADDITIONAL PACKING REQUIREMENTS FOR SINGLE PACKAGINGS

#### Packing Group III

- Packagings must meet the Packing Group II performance requirements.

**SINGLE PACKAGINGS FOR PACKING GROUP III ONLY***Drums**Jerricans*

Steel (1A1, 1A2)

Steel (3A1, 3A2)

**Packing Instructions Y474 – Y477**

Limited quantities  
Passenger and cargo aircraft

**General requirements**

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

**3) Limited quantity requirements**

- Part 3, Chapter 4 requirements must be met, including:
  - the capability of the package to pass a 1.2 m drop test; and
  - a 24-hour stacking test.

COMBINATION PACKAGINGS						SINGLE PACKAGINGS

Steel (3A2)

## Packing Instructions 487 – 491

Cargo aircraft only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
<i>Packing instruction</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>

		Plastic	2.5 kg		
		Metal	5.0 kg		
490	II	Glass	2.5 kg	50 kg	50 kg
		Plastic	5.0 kg		
		Metal	5.0 kg		
		Plastic bag	2.5 kg		
491	III	Glass	5.0 kg	100 kg	100 kg
		Plastic	10.0 kg		
		Metal	10.0 kg		
		Plastic bag	5.0 kg		

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

#### *Packing Group I*

- Inner packagings must be hermetically sealed, e.g. by taping or by threaded closures.

#### *Packing Groups I and II*

- For wetted substances where the outer packaging is not leakproof, a leakproof liner or equally effective means of intermediate containment must be provided.

#### *Packing Group III*

- Packagings must meet the Packing Group II performance requirements.
- For wetted substances where the outer packaging is not leakproof, a leakproof liner or equally effective means of intermediate containment must be provided.

## Packing Instruction 492

Passenger and cargo aircraft for UN 3292 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS				
<i>UN number and proper shipping name</i>	<i>Packing conditions</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	SINGLE PACKAGINGS
UN 3292 <b>Batteries, containing sodium</b>	Batteries may be offered for transport and transported unpacked or in protective enclosures such as fully enclosed or wooden slatted crates that are not subject to the requirements of Part 6 of these Instructions.	Forbidden	No limit	No limit
UN 3292 <b>Cells, containing sodium</b>		25 kg	25 kg	No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group II performance requirements.
- Batteries must be protected against short circuit and must be isolated in such a manner as to prevent short circuits.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### *Boxes*

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### *Drums*

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastics (1H2)  
Steel (1A2)

#### *Jerricans*

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

**Packing Instruction 493**

Passenger aircraft for UN 3399 only

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

2) **Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<b>COMBINATION PACKAGINGS</b>					<b>SINGLE PACKAGINGS</b>
<i>UN number and proper shipping name</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>	
UN 3399 <b>Organometallic substance, liquid, water reactive, flammable</b>	I	Forbidden

## Packing Instruction 494

Cargo aircraft only for UN 3399

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					
<i>UN number and proper shipping name</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>	SINGLE PACKAGINGS

		Appropriate cylinders or other pressure vessels (see 4;2.7)	2.5 L	5 L	No
	III	Glass (see 6;3.2)	5.0 L	60 L	60 L
		Appropriate cylinders or other pressure vessels (see 4;2.7)	5.0 L	60 L	60 L

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

#### *Packing Group I*

- Inner packagings must have threaded enclosures and must be surrounded in inert cushioning and absorbent material in a quantity sufficient to absorb the entire contents and enclosed in a leakproof liner, plastic bag or other equally effective means of intermediate leakproof containment.

#### *Packing Group II*

- Glass inner packagings must be packed with absorbent material and enclosed in a leakproof liner, plastic bag or other equally effective means of intermediate leakproof containment.

#### *Packing Group III*

- Packagings must meet the Packing Group II performance requirements.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)**

<i>Boxes</i>	<i>Drums</i>	<i>Jerricans</i>
Aluminium (4B)	Aluminium (1B2)	Aluminium (3B2)

Plastics (4H1, 4H2)	Plastics (1H2)	
Plywood (4D)	Steel (1A2)	
Reconstituted wood (4F)		
Steel (4A)		

**SINGLE PACKAGINGS FOR PACKING GROUP III ONLY**

Appropriate cylinders or pressure vessels as permitted by 4;2.7.

**Packing Instruction 495**

Passenger and cargo aircraft for UN 3476 only

**General requirements**

Part 4;1.1.1, 1.1.2 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3476 Fuel cell cartridges	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges must be securely cushioned in the outer packagings.
- The mass of each fuel cell cartridge must not exceed 1 kg.
- Packagings must meet the Packing Group II performance requirements.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)**

<i>Boxes</i>	<i>Drums</i>	<i>Jerricans</i>
Aluminium(4B)	Aluminium(1B2)	Steel (3A2)
Fibreboard (4G)	Fibreboard (1G)	Plastics(3H2)

Plastic (4H2)	Plywood (1D)	
Plywood (4D)	Steel (1A2)	
Reconstituted wood (4F)		
Steel (4A)		

## Packing Instruction 496

Passenger and cargo aircraft for UN 3476 (contained in equipment) only

### General requirements

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3476 Fuel cell cartridges contained in equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

### ADDITIONAL PACKING REQUIREMENTS

- Fuel cell cartridges that are contained in equipment must be protected against short circuit and the equipment must be protected against inadvertent operation.
- Equipment must be securely cushioned in the outer packagings.
- The mass of each fuel cell cartridge must not exceed 1 kg.
- Fuel cell systems must not charge batteries during transport.
- On passenger aircraft, each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1 or a standard approved by the appropriate authority of the State of Origin.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

*Boxes*

*Drums*

*Jerricans*

Strong outer packagings

## Packing Instruction 497

Passenger and cargo aircraft for UN 3476 (packed with equipment) only

### General requirements

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3476 Fuel cell cartridges packed with equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

### ADDITIONAL PACKING REQUIREMENTS

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus two spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.
- The mass of each fuel cell cartridge must not exceed 1 kg.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

*Boxes*

*Drums*

*Jerricans*

Strong outer packagings

**499**

## PACKING INSTRUCTION 499

**499**

Only packagings which are approved by the appropriate national authority for these substances may be used (see 4;2.8). A copy of this approval must accompany each consignment or an annotation that it has been granted must be included with the transport document.

## CLASS 5 — OXIDIZING SUBSTANCES; ORGANIC PEROXIDES

### Packing Instructions Y540 – Y541

Limited quantities  
Passenger and cargo aircraft

#### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met including:
  - the capability of the package to pass a 1.2 m drop test;
  - a 24-hour stacking test; and
  - inner packagings for liquids must be capable of passing a pressure differential test (4;1.1.6).

COMBINATION PACKAGINGS						SINGLE PACKAGINGS
<i>Packing instruction</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>	<i>Total gross mass per package</i>

## Packing Instructions Y543 – Y546

Limited quantities  
Passenger and cargo aircraft

### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met including:
  - the capability of the package to pass a 1.2 m drop test; and
  - a 24-hour stacking test.

## Packing Instruction 565

Passenger and cargo aircraft for UN 3356 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS				SINGLE PACKAGINGS
UN number and proper shipping name	Packing conditions	Total quantity per package — passenger	Total quantity per package — cargo	
UN 3356 <b>Oxygen generator, chemical</b>	The generators must be tightly packed in the outer packagings listed below.	Forbidden	25 kg G	Unpackaged No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- The generator, without its packaging, must be capable of withstanding a 1.8 m drop test onto a rigid, non-resilient, flat and horizontal surface, in the position most likely to cause actuation, without loss of its contents and without actuation. For portable breathing equipment (PBE), which are in a vacuum-sealed bag as part of their containment system, this test may be conducted on the PBE in the vacuum-sealed bag.
- When a generator is equipped with an actuating device, it must have at least two positive means of preventing unintentional actuation. For PBE, which are in a vacuum-sealed bag as part of their containment system, the vacuum-sealed bag may be considered the second positive means of preventing unintentional actuation.
- The generator(s) must be transported in a package which will meet the following requirements when one generator in the package is actuated:
  - 1) other generators in the package will not be actuated;
  - 2) packaging material will not ignite; and
  - 3) the outside surface temperature of the completed package will not exceed 100°C.

*Note.— To enable tests 1), 2) and 3) to be conducted on PBE, it is acceptable to break the vacuum-sealed bag to actuate the generator before placing it in the package.*

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

<i>Boxes</i>	<i>Drums</i>	<i>Jerricans</i>
Aluminium (4B)	Aluminium (1B2)	Aluminium (3B2)
Fibreboard (4G)	Fibre (1G)	Plastics (3H2)
Natural wood (4C1, 4C2)	Other metal (1N2)	Steel (3A2)
Plastics (4H1, 4H2)	Plastics (1H2)	
Plywood (4D)	Steel (1A2)	
Reconstituted wood (4F)		
Steel (4A)		

## Packing Instruction 570

Passenger and cargo aircraft

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS							SINGLE PACKAGINGS
UN number and proper shipping name	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle)—passenger	Total quantity per package — passenger	Inner packaging quantity (per receptacle)—cargo	Total quantity per package — cargo		
<b>Liquids</b>							
UN 3103	<b>Organic peroxide type C, liquid</b>	Plastic	0.5 L	5 L	1.0 L	10 L	No
UN 3105	<b>Organic peroxide type D, liquid</b>	Plastic	0.5 L	5 L	1.0 L	10 L	
UN 3107	<b>Organic peroxide type E, liquid</b>	Plastic	1.0 L	10 L	2.5 L	25 L	
UN 3109	<b>Organic peroxide type F, liquid</b>	Plastic	1.0 L	10 L	2.5 L	25 L	
<b>Solids</b>							
UN 3104	<b>Organic peroxide type C, solid</b>	Plastic and plastic bag	0.5 kg	5 kg	1.0 kg	10 kg	No
UN 3106	<b>Organic peroxide type D, solid</b>	Plastic and plastic bag	0.5 kg	5 kg	1.0 kg	10 kg	
UN 3108	<b>Organic peroxide type E, solid</b>	Plastic and plastic bag	1.0 kg	10 kg	2.5 kg	25 kg	
UN 3110	<b>Organic peroxide type F, solid</b>	Plastic and plastic bag	1.0 kg	10 kg	2.5 kg	25 kg	

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastics (1H2)  
Plywood (1D)  
Steel (1A2)

#### Jerricans

Aluminium (3B2)  
Plastics (3H2)  
Steel (3A2)

## CLASS 6 — TOXIC AND INFECTIOUS SUBSTANCES

### Packing Instructions Y640 – Y642

Limited quantities  
Passenger and cargo aircraft

#### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met including:
  - the capability of the package to pass a 1.2 m drop test;
  - a 24-hour stacking test; and
  - inner packagings for liquids must be capable of passing a pressure differential test (4;1.1.6).

COMBINATION PACKAGINGS						SINGLE PACKAGINGS	
<i>Packing instruction</i>	<i>Packing group</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package</i>	<i>Total gross mass per package</i>

## Packing Instructions 651 – 655

Passenger aircraft

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion for substances with a Class 8 subsidiary risk.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS

## Packing Instruction 679

Cargo aircraft only for UN 1700, 2016 and 2017 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS			SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Packing conditions</i>	<i>Maximum net quantity per package</i>	
UN 1700 <b>Tear gas candles</b>	Elements must not be assembled in grenades or devices, but must be packed in a separate wooden (4C1, 4C2) box and so cushioned that they cannot come into contact with each other or with the walls of the packaging during transport.  Not more than 24 grenades and 24 functioning devices per package are permitted.	50 kg	No
UN 2016 <b>Ammunition, toxic, non-explosive</b>	Without ignition elements, bursting charges, detonating fuses or other explosive components.	75 kg	No
UN 2017 <b>Ammunition, tear-producing, non-explosive</b>	Without ignition elements, bursting charges, detonating fuses or other explosive components.	50 kg	No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group II performance requirements.
- The articles must be individually packaged and separated from each other using partitions, dividers, inner packagings or cushioning material to prevent inadvertent discharge during normal conditions of transport.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastics (1H2)  
Plywood (1D)  
Steel (1A2)

## Packing Instruction 680

Passenger and cargo aircraft for UN 1888 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

2) **Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS						SINGLE PACKAGINGS	
<i>UN number and proper shipping name</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle) — passenger</i>	<i>Inner packaging quantity (per receptacle) — cargo</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	<i>Passenger</i>	<i>Cargo</i>

Plastic (3H1, 3H2)  
Steel (3A1, 3A2)

## Packing Instruction Y680

Limited quantities  
Passenger and cargo aircraft for UN 1888 only

### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met including:
  - the capability of the package to pass a 1.2 m drop test;
  - a 24-hour stacking test; and
  - inner packagings for liquids must be capable of passing a pressure differential test (4;1.1.6).

COMBINATION PACKAGINGS						SINGLE PACKAGINGS
UN number and proper shipping name	Packing group	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle)	Total quantity per package	Total gross mass per package

## PACKING INSTRUCTION 699

Passenger and cargo aircraft for UN 3123 and UN 3125 only

Only packagings which are approved by the appropriate national authority for these substances may be used (see 4;2.8). A copy of this approval must accompany each consignment or an annotation that it has been granted must be included with the transport document.

## CLASS 8 — CORROSIVES

### Packing Instructions Y840 – Y841

Limited quantities  
Passenger and cargo aircraft

#### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.
- Substances of Class 8 are permitted in glass or earthenware inner packagings only if the substance is free from hydrofluoric acid.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met including:
  - the capability of the package to pass a 1.2 m drop test;
  - a 24-hour stacking test; and
  - inner packagings for liquids must be capable of passing a pressure differential test (4;1.1.6).

COMBINATION PACKAGINGS						SINGLE PACKAGINGS
Packing instruction	Packing group	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle)	Total quantity per package	Total gross mass per package

## Packing Instructions Y843 – Y845

Limited quantities  
Passenger and cargo aircraft

### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.
- Substances of Class 8 are permitted in glass or earthenware inner packagings only if the substance is free from hydrofluoric acid.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met including:
  - the capability of the package to pass a 1.2 m drop test; and
  - a 24-hour stacking test.

COMBINATION PACKAGINGS						SINGLE PACKAGINGS

## Packing Instructions 850 – 852

Passenger aircraft

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.
- Substances of Class 8 are permitted in glass or earthenware inner packagings only if the substance is free from hydrofluoric acid.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
Packing instruction	Packing group	Inner packaging (see 6;3.2)	Inner packaging quantity (per receptacle)	Total quantity per package	
850	I	Glass	0.5 L	0.5 L	No
		Plastic	0.5 L		
		Metal	0.5 L		
851	II	Glass	1.0 L	1 L	No
		Plastic	1.0 L		
		Metal	1.0 L		
852	III	Glass	2.5 L	5 L	No
		Plastic	2.5 L		
		Metal	5.0 L		

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

#### Packing Group I

- Inner packagings must be packed with absorbent material and placed in a rigid leakproof receptacle before packing in outer packagings.

#### Packing Group III

- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)

**Packing Instruction 866**

Cargo aircraft only for UN 2028 only

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<b>COMBINATION PACKAGINGS</b>				<b>SINGLE PACKAGINGS</b>
<i>UN number and proper shipping name</i>	<i>Packing conditions</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	
UN 2028 <b>Bombs, smoke, non-explosive</b> with corrosive liquid, without initiating device	Bombs, smoke may be carried provided they are without ignition elements, bursting charges, detonating fuses or other explosive components.	Forbidden	50 kg	No

**ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS**

- The articles must be individually packaged and separated from each other using partitions, dividers, inner packagings or cushioning material.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)**

<i>Boxes</i>	<i>Drums</i>
Aluminium (4B) Fibreboard (4G) Natural wood (4C1, 4C2) Plastics (4H1, 4H2) Plywood (4D) Reconstituted wood (4F) Steel (4A)	Aluminium (1B2) Fibre (1G) Other metal (1N2) Plastics (1H2) Steel (1A2)

## Packing Instruction 867

Passenger and cargo aircraft for UN 2803 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	
UN 2803 <b>Gallium</b>	Plastic	3.5 kg	20 kg	20 kg	No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group I performance requirements.
- Plastic inner packagings must be enclosed in liners or bags of strong leakproof and puncture resistant material impervious to the contents and completely surrounding the contents to prevent it from escaping from a package irrespective of its position or orientation.
- Plastic inner packagings must be packed with sufficient cushioning material to prevent breakage.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### *Boxes*

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)  
Plywood (4D)

Steel (4A)

#### *Drums*

Aluminium (1B2)  
Fibre (1G)  
Other metal (1N2)  
Plastics (1H2)  
Steel (1A2)

### CARRIAGE AT LOW TEMPERATURES

When it is necessary to transport Gallium at low temperatures in order to maintain it in a completely solid state, packagings may be overpacked in strong water-resistant outer packagings which contain dry ice or other means of refrigeration. If a refrigerant is used, all of the above materials used in the packaging of gallium must be chemically and physically resistant at the low temperatures of the refrigerant employed. If dry ice is used, the outer packaging must permit the release of carbon dioxide gas.

## Packing Instruction 868

Passenger and cargo aircraft for UN 2809 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
<i>UN number and proper shipping name</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Inner packaging quantity (per receptacle)</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	
UN 2809 <b>Mercury</b>	Glass	2.5 kg	35 kg	35 kg	See below
	Plastic	2.5 kg			

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group I performance requirements.
- Inner packagings must be enclosed in liners or bags of strong leakproof and puncture resistant material impervious to the contents and completely surrounding the contents to prevent it from escaping from a package irrespective of its position or orientation.
- Inner packagings must be packed with sufficient cushioning material to prevent breakage.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### *Boxes*

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastics (4H1, 4H2)

Other metal (1N2)  
Plastics (1H2)  
Steel (1A2)

### SINGLE PACKAGINGS

Mercury may also be packed in a single packaging which may only be a welded steel bottle with an inner vaulted bottom, an opening not exceeding 20 mm and a closure which must be a bolt with a conical thread.

## Packing Instruction 869

Passenger and cargo aircraft for UN 2809 contained in manufactured articles only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

### COMBINATION PACKAGINGS

<i>UN number and proper shipping name</i>	<i>Packing conditions</i>		<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	<b>SINGLE PACKAGINGS</b>
UN 2809 <b>Mercury</b> contained in manufactured articles	Manufactured articles or apparatuses of which metallic mercury is a component part, such as manometers, pumps, thermometers, and switches.	Must have sealed inner liners or bags of strong leakproof and puncture-resistant material impervious to mercury which will prevent the escape of mercury from the package irrespective of its position.  <i>Note.— Mercury switches and relays are excepted from the requirement for a sealed inner liner or bag providing they are of the totally enclosed leakproof type in sealed metal or plastic units.</i>			

COMBINATION PACKAGINGS					SINGLE PACKAGINGS
UN number and proper shipping name	Packing conditions		Total quantity per package — passenger	Total quantity per package — cargo	
	Electron tubes, mercury vapour tubes (tubes with less than a total net quantity of 450 g of mercury).	Tubes must be packed in strong outer packagings with all seams and joints sealed with self-adhesive, pressure-sensitive tape which will prevent the escape of mercury from the package.  <i>Note.— Tubes with more than 450 g of mercury must be packaged according to the above Instructions for manufactured articles or apparatuses.</i>	No limit	No limit	No
	Electron tubes which do not contain more than 5 g of mercury each and which are packed in the manufacturer's original packagings, may be accepted up to a total net quantity of 30 g of mercury per package;  or  Tubes which are completely jacketed in sealed leakproof metal cases may be accepted in the manufacturer's original packagings.	May be excepted if packed in the manufacturer's original packagings.			

Thermometers, switches and relays, each containing a total quantity of not more than 15 g of mercury, are excepted from the requirements of these Instructions if they are installed as an integral part of a machine or apparatus and so fitted that shock or impact damage, leading to leakage of mercury, is unlikely to occur under conditions normally incident to transport.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)**

*Boxes*

*Drums*

*Jerricans*

Strong outer packagings

**CONSIGNMENT PROCEDURES**

For electron tubes, mercury vapour tubes and similar tubes, the shipper must indicate the quantity of mercury on the dangerous goods transport document.

## Packing Instruction 870

Passenger and cargo aircraft for UN 2794 and 2795 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

COMBINATION PACKAGINGS				
<i>UN number and proper shipping name</i>	<i>Packing conditions</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	<b>SINGLE PACKAGINGS</b>
UN 2794 <b>Batteries, wet, filled with acid</b> UN 2795 <b>Batteries, wet, filled with alkali</b>	Batteries must be placed in an acid/alkali-proof liner of sufficient strength and adequately sealed to positively preclude leakage in the event of spillage. The batteries must be packed so that the fill openings and vents, if any, are upward; they must be incapable of short-circuiting and be securely cushioned in the packagings.  <i>Batteries installed in equipment</i>  If batteries are shipped as an integral component of assembled equipment, they must be securely installed and fastened in an upright position and protected against contact with other articles so as to prevent short circuits. Batteries must be removed and packed according to this packing instruction if the assembled equipment is likely to be carried in other than an upright position.	30 kg G	No limit	Unpackaged batteries No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group II performance requirements.
- For batteries, electric storage, packed with battery fluid in the same outer packaging, see UN 2796 and UN 2797.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### *Boxes*

Aluminium (4B)  
Fibreboard (4G)

 Steel (4A)

## Packing Instruction 872

Passenger and cargo aircraft for UN 2800

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.
- Metal packagings must be corrosion resistant or be protected against corrosion.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Packing conditions</i>	<i>Total quantity per package — passenger</i>	<i>Total quantity per package — cargo</i>	
UN 2800 <b>Batteries, wet, non- spillable</b>	Batteries must be protected against short circuits and must be securely packed in strong outer packagings.	No limit	No limit	No

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

*Boxes*

*Drums*

*Jerricans*

Strong outer packagings

### TESTING

Batteries can be considered as non-spillable provided that they are capable of withstanding the vibration and pressure differential tests given below, without leakage of battery fluid.

*Vibration test:* The battery is rigidly clamped to the platform of a vibration machine and a simple harmonic motion having an amplitude of 0.8 mm (1.6 mm maximum total excursion) is applied. The frequency is varied at the rate of 1 Hz/min between the limits of 10 Hz to 55 Hz. The entire range of frequencies and return is traversed in  $95 \pm 5$  minutes for each mounting position (direction of vibration) of the battery. The battery must be tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for equal time periods.

*Pressure differential test:* Following the vibration test, the battery is stored for six hours at  $24^{\circ}\text{C} \pm 4^{\circ}\text{C}$  while subjected to a pressure differential of at least 88 kPa. The battery must be tested in three mutually perpendicular positions (to include testing with fill openings and vents, if any, in an inverted position) for at least six hours in each position.

*Note.— Non-spillable type batteries which are an integral part of, and necessary for the operation of, mechanical or electronic equipment must be securely fastened in the battery holder on the equipment and protected in such a manner so as to prevent damage and short circuits.*

## Packing Instruction 873

Passenger and cargo aircraft for UN 3477

### General requirements

Part 4;1.1.1, 1.1.2 and 1.1.7 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3477 Fuel cell cartridges	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

### ADDITIONAL PACKING REQUIREMENTS

- Fuel cell cartridges must be securely cushioned in the outer packagings.
- The mass of each fuel cell cartridge must not exceed 1 kg.
- Packagings must meet the Packing Group II performance requirements.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

#### Boxes

Aluminium(4B)  
Fibreboard (4G)

## Packing Instruction 874

Passenger and cargo aircraft for UN 3477 (contained in equipment) only

### General requirements

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3477 Fuel cell cartridges contained in equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- Fuel cell cartridges that are contained in equipment must be protected against short circuit and the equipment must be protected against inadvertent operation.
- Equipment must be securely cushioned in the outer packagings.
- The mass of each fuel cell cartridge must not exceed 1 kg.
- Fuel cell systems must not charge batteries during transport.
- On passenger aircraft, each fuel cell system and each fuel cell cartridge must conform to IEC PAS 62282-6-1 Ed. 1 or a standard approved by the appropriate authority of the State of Origin.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes**Drums**Jerricans*

Strong outer packagings

**Packing Instruction 875**

Passenger and cargo aircraft for UN 3477 (packed with equipment) only

**General requirements**

Part 4;1.1.1 and 1.1.7 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3477 Fuel cell cartridges packed with equipment	5 kg of fuel cell cartridges	50 kg of fuel cell cartridges

**ADDITIONAL PACKING REQUIREMENTS**

- When fuel cell cartridges are packed with equipment, they must be packed in intermediate packagings together with the equipment they are capable of powering.
- The maximum number of fuel cell cartridges in the intermediate packaging must be the minimum number required to power the equipment, plus 2 spares.
- The fuel cell cartridges and the equipment must be packed with cushioning material or divider(s) or inner packaging so that the fuel cell cartridges are protected against damage that may be caused by the movement or placement of the equipment and the cartridges within the packaging.
- The mass of each fuel cell cartridge must not exceed 1 kg.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes**Drums**Jerricans*

Strong outer packagings

## CLASS 9 — MISCELLANEOUS DANGEROUS GOODS

### Packing Instruction 950

Passenger and cargo aircraft for UN 3166 only  
(See Packing Instruction 951 for flammable gas-powered vehicles and engines or  
Packing Instruction 952 for battery-powered equipment and vehicles)

#### General requirements

Part 4, Chapter 1 requirements must be met, including:

##### 1) Compatibility requirements

— Substances must be compatible with their packagings as required by 4;1.1.3.

##### 2) Closure requirements

— Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3166 <b>Engines, internal combustion, flammable liquid powered or Vehicle, flammable liquid powered</b>	No limit	No limit

#### ADDITIONAL PACKING REQUIREMENTS

##### *Flammable liquid fuel tanks*

Except as otherwise provided for in this packing instruction, fuel tanks must be drained of fuel and tank caps fitted securely. Special precautions are necessary to ensure complete drainage of the fuel system of vehicles, machines or equipment incorporating internal combustion engines, such as lawn mowers and outboard motors, where such machines or equipment could possibly be handled in other than an upright position. When it is not possible to handle in other than an upright position, vehicles, except those with diesel engines, must be drained of fuel as far as practicable, and if any fuel remains, it must not exceed one-quarter of the tank capacity.

##### *Diesel engines*

Vehicles equipped with diesel engines are excepted from the requirement to drain the fuel tanks, provided that a sufficient ullage space has been left inside the tank to allow fuel expansion without leakage, and the tank caps are tightly closed. A careful check must be made to ensure there are no fuel leakages.

##### *Batteries*

All batteries must be installed and securely fastened in the battery holder of the vehicle, machine or equipment and must be protected in such a manner so as to prevent damage and short circuits. In addition:

- 1) if spillable batteries are installed, and it is possible for the vehicle, machine or equipment to be handled in such a way that batteries would not remain in their intended orientation, they must be removed and packed according to Packing Instruction 492 or 870 as applicable;
- 2) if lithium batteries are installed, they must be of a type that has successfully passed the tests specified in the *UN Manual of Tests and Criteria*, Part III, subsection 38.3, must be securely fastened in the vehicle, machinery or equipment and must be protected in such a manner so as to prevent damage and short circuits; and
- 3) if sodium batteries are installed they must conform to the requirements of Special Provision A94.

#### Other operational equipment

- 1) Dangerous goods required for the operation of the vehicle, machine or equipment, such as fire extinguishers, tire inflation canisters, safety devices, must be securely mounted in the vehicle, machine or equipment. Aircraft may also contain other articles and substances which would otherwise be classified as dangerous goods but which are installed in that aircraft in accordance with the pertinent airworthiness requirements and operating regulations. If fitted, life-rafts, emergency escape slides and other inflation devices must be protected such that they cannot be activated accidentally. Vehicles containing dangerous

goods identified in Table 3-1 as forbidden on passenger aircraft may only be transported on cargo aircraft. Replacements for the dangerous goods permitted must not be carried under this packing instruction.

- 2) Vehicles equipped with theft-protection devices, installed radio communications equipment or navigational systems must have such devices, equipment or systems disabled.

**Internal combustion engine shipped separately (not installed)**

- 1) When internal combustion engines are being shipped separately, all fuel, coolant or hydraulic systems remaining in or on the engine must be drained as far as practicable and all disconnected fluid pipes must be sealed with leakproof caps, which are positively retained.
- 2) This requirement also applies to vehicles, machines or equipment containing internal combustion engines which are being shipped in a dismantled state such that fuel lines have been disconnected.

## Packing Instruction 951

Cargo aircraft only for UN 3166 only  
(See Packing Instruction 950 for flammable liquid-powered vehicles and engines or  
Packing Instruction 952 for battery-powered equipment and vehicles)

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

2) **Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3166 <b>Engines, internal combustion, flammable gas powered or Vehicle, flammable gas powered</b>	Forbidden	No limit

**ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS**

*Flammable gas vessels*

- 1) for flammable gas-powered vehicles, machines or equipment, pressurized vessels containing the flammable gas must be completely emptied of flammable gas. Lines from vessels to gas regulators, and gas regulators themselves, must also be drained of all trace of flammable gas. To ensure that these conditions are met, gas shut-off valves must be left open and connections of lines to gas regulators must be left disconnected upon delivery of the vehicle to the operator. Shut-off valves must be closed and lines reconnected at gas regulators before loading the vehicle aboard the aircraft;

or alternatively,

- 2) flammable gas-powered vehicles, machines or equipment that have pressure receptacles (fuel tanks) equipped with electrically operated valves that close automatically in case the power is disconnected, or with manual shut-off valves, may be transported under the following conditions:
  - i) the valves must be in the closed position and in the case of electrically operated valves, power to those valves must be disconnected;
  - ii) after closing the valves, the vehicle, equipment or machinery must be operated until it stops from lack of fuel before being loaded aboard the aircraft;
  - iii) in no part of the closed system must the remaining pressure of compressed gases exceed 5 per cent of the maximum allowable working pressure of the system, or more than 2 000 kPa (20 bar), whichever is the lower.

**Batteries**

All batteries must be installed and securely fastened in the battery holder of the vehicle, machine or equipment and must be protected in such a manner so as to prevent damage and short circuits. In addition:

- 1) if spillable batteries are installed, and it is possible for the vehicle, machine or equipment to be handled in such a way that batteries would not remain in their intended orientation, they must be removed and packed according to Packing Instruction 492 or 870 as applicable;
- 2) if lithium batteries are installed, they must be of a type that has successfully passed the tests specified in the *UN Manual of Tests and Criteria*, Part III, subsection 38.3, must be securely fastened in the vehicle, machinery or equipment and must be protected in such a manner so as to prevent damage and short circuits; and
- 3) if sodium batteries are installed they must conform to the requirements of Special Provision A94.

**Other operational equipment**

- 1) Dangerous goods required for the operation of the vehicle, machine or equipment, such as fire extinguishers, tire inflation canisters, safety devices, must be securely mounted in the vehicle, machine or equipment. Aircraft may also contain other articles and substances which would otherwise be classified as dangerous goods but which are installed in that aircraft in accordance with the pertinent airworthiness requirements and operating regulations. If fitted, life-rafts, emergency escape slides and other inflation devices must be protected such that they cannot be activated accidentally. Vehicles containing dangerous goods identified in Table 3-1 as forbidden on passenger aircraft may only be transported on cargo aircraft. Replacements for the dangerous goods permitted must not be carried under this packing instruction.
- 2) Vehicles equipped with theft-protection devices, installed radio communications equipment or navigational systems must have such devices, equipment or systems disabled.

**Internal combustion engine shipped separately (not installed)**

- 1) When internal combustion engines are being shipped separately, all fuel, coolant or hydraulic systems remaining in or on the engine must be drained as far as practicable and all disconnected fluid pipes must be sealed with leakproof caps, which are positively retained.
- 2) This requirement also applies to vehicles, machines or equipment containing internal combustion engines which are being shipped in a dismantled state such that fuel lines have been disconnected.

**Packing Instruction 952**

Passenger and cargo aircraft for UN 3171 only  
(See Packing Instruction 950 for flammable liquid-powered vehicles and engines or  
Packing Instruction 951 for flammable gas-powered vehicles and engines)

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 3171 <b>Battery-powered equipment</b> or <b>Battery-powered vehicle</b>	No limit	No limit

**ADDITIONAL PACKING REQUIREMENTS**

This entry applies to vehicles and equipment which are powered by wet batteries, sodium batteries or lithium batteries and which are transported with these batteries installed. Examples of such vehicles and equipment are electrically-powered cars, lawn mowers, wheelchairs and other mobility aids. Vehicles that also contain an internal combustion engine must be consigned under the entry UN 3166 Vehicle (flammable gas powered) (See Packing Instruction 951) or Vehicle (flammable liquid powered) (See Packing Instruction 950), as appropriate.

Battery-powered vehicles, machines or equipment must meet the following requirements:

**Batteries**

All batteries must be installed and securely fastened in the battery holder of the vehicle, machine or equipment and must be protected in such a manner so as to prevent damage and short circuits. In addition:

- 1) if spillable batteries are installed, and it is possible for the vehicle, machine or equipment to be handled in such a way that batteries would not remain in their intended orientation, they must be removed and packed according to Packing Instruction 492 or 870 as applicable;
- 2) if lithium batteries are installed, they must be of a type that has successfully passed the tests specified in the UN *Manual of Tests and Criteria*, Part III, subsection 38.3, must be securely fastened in the vehicle, machinery or equipment and must be protected in such a manner so as to prevent damage and short circuits; and
- 3) if sodium batteries are installed they must conform to the requirements of Special Provision A94.

**Other operational equipment**

- 1) Dangerous goods required for the operation of the vehicle, machine or equipment, such as fire extinguishers, tire inflation canisters, and safety devices, must be securely mounted in the vehicle, machine or equipment. Aircraft may also contain other articles and substances which would otherwise be classified as dangerous goods but which are installed in that aircraft in accordance with the pertinent airworthiness requirements and operating regulations. If fitted, life-rafts, emergency escape slides and other inflation devices must be protected such that they cannot be activated accidentally. Vehicles containing dangerous goods identified in Table 3-1 as forbidden on passenger aircraft may only be transported on cargo aircraft. Replacements for the dangerous goods permitted must not be carried under this packing instruction.
- 2) Vehicles equipped with theft-protection devices, installed radio communications equipment or navigational systems must have such devices, equipment or systems disabled.

**Packing Instruction 953**

Passenger and cargo aircraft for UN 2807 only

**General requirements**

Part 4, Chapter 1 requirements must be met, including:

**1) Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

**2) Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 2807 <b>Magnetized material</b>	No limit	No limit

**ADDITIONAL PACKING REQUIREMENTS**

Magnetized material will be accepted only when:

- a) devices such as magnetrons and light meters have been packed so that the polarities of the individual units oppose one another;
- b) permanent magnets, where possible, have keeper bars installed;
- c) the magnetic field strength at a distance of 4.6 m from any point on the surface of the assembled consignment:
  - 1) does not exceed 0.418 A/m; or
  - 2) produces a magnetic compass deflection of 2 degrees or less.

Magnetized material may be shipped in a unit load device or other type of pallet prepared by a single shipper provided that the shipper has made prior arrangements with the operator. The shipper must provide the operator with written documentation stating the number of packages of magnetized material contained in each unit load device or other type of pallet.

*Note.— For loading restrictions, see 7;2.10.*

**Determination of shielding requirements**

The magnetic field strength of magnetized materials must be measured using measuring devices having a sensitivity sufficient to measure magnetic fields greater than 0.0398 A/m within a tolerance of plus or minus 5 per cent, or with a magnetic compass sensitive enough to read a 2 degree variation, preferably in 1-degree increments or finer. If the maximum field strength observed at a distance of 2.1 m is less than 0.159 A/m or there is no significant compass deflection (less than 0.5 degree), the article is not restricted as a magnetized material. Methods of determining if a magnetized article meets the definition of a magnetized material include:

- a) When an oersted meter is used, it is placed on one of two points positioned 4.6 m apart and located in an area that is free from magnetic interference other than the earth's magnetic field. The oersted meter is then aligned with the second point and "balanced" to a zero reading. The magnetic article is then placed on the other point and the magnetic field strength is measured by reading the meter while rotating the package 360 degrees in its horizontal plane. If the maximum field strength observed is 0.418 A/m or less, the article is acceptable for air transport. When the maximum field strength exceeds 0.418 A/m, shielding should be applied until a reading of 0.418 A/m or less has been attained.
- b) When a magnetic compass is used as a sensing device, it should be placed on one of two points positioned 4.6 m apart which are aligned in an East/West direction and in an area that is free from any magnetic interference other than the earth's magnetic field. The packaged item to be tested is placed on the other point and rotated 360 degrees in its horizontal plane for indication of compass deflection. When the maximum compass deflection observed is 2 degrees or less, the article is acceptable for air transport. When the maximum compass deflection of an item exceeds 2 degrees, shielding must be applied until the maximum deflection is not more than 2 degrees.

## Packing Instruction 954

Passenger and cargo aircraft for UN 1845 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

2) **Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 1845 <b>Carbon dioxide, solid or Dry ice</b>	200 kg	200 kg

### ADDITIONAL PACKING REQUIREMENTS

In packages:

- a) must be packed in accordance with the general packing requirements of 4;1 and be in packaging designed and constructed to permit the release of carbon dioxide gas to prevent a build-up of pressure that could rupture the packaging;
- b) the shipper must make arrangements with the operator(s) for each shipment, to ensure that ventilation safety procedures are followed;
- c) the dangerous goods transport document requirements of 5;4 are not applicable provided alternative written documentation is describing the contents. The information required is as follows and should be shown in the following order:
  - 1) UN 1845 (**Carbon dioxide, solid or Dry ice**) the word "Class" may be included prior to the number "9";
  - 2) the number of packages and the net quantity of dry ice in each package;
- d) the net mass of the **Carbon dioxide, solid or Dry ice** must be marked on the outside of the package; and
- e) the information must be included with the description of the goods.

Dry ice used for other than dangerous goods may be shipped in a unit load device or other type of pallet prepared by a single shipper provided that:

- a) the shipper has made prior arrangements with the operator;
- b) the unit load device, or other type of pallet, must allow the venting of the carbon dioxide gas to prevent a dangerous build-up of pressure; and
- c) the shipper must provide the operator with written documentation stating the total quantity of the dry ice contained in the unit load device or other type of pallet.

## Packing Instruction 955

Passenger and cargo aircraft for UN 2990 and UN 3072 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

1) **Compatibility requirements**

- Substances must be compatible with their packagings as required by 4;1.1.3.

2) **Closure requirements**

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>
UN 2990 <b>Life-saving appliances, self-inflating</b> UN 3072 <b>Life-saving appliances, not self-inflating</b> containing dangerous goods as equipment	No limit	No limit

### ADDITIONAL PACKING REQUIREMENTS

The description “Life-saving appliances, self-inflating” (UN 2990) is intended to apply to life-saving appliances that present a hazard if the self-inflating device is activated accidentally.

Life-saving appliances, such as life rafts, life vests, aircraft survival kits or aircraft evacuation slides, may only contain the dangerous goods listed below:

- a) Division 2.2 gases, must be contained in cylinders which conform to the requirements of the appropriate national authority of the country in which they are approved and filled. Such cylinders may be connected to the life-saving appliance. These cylinders may include installed actuating cartridges (cartridges, power device of Division 1.4C and 1.4S) provided the aggregate quantity of deflagrating (propellant) explosives does not exceed 3.2 grams per unit. When the cylinders are shipped separately, they shall be classified as appropriate for the Division 2.2 gas contained and need not be marked, labelled or described as explosive articles;
- b) signal devices (Class 1), which may include smoke and illumination signal flares; signal devices must be packed in plastic or fibreboard inner packagings;
- c) small quantities of flammable substances, corrosive solids and organic peroxides (Class 3, Class 8, Division 4.1 and 5.2), which may include a repair kit and not more than 30 strike-anywhere matches. The organic peroxide may only be a component of a repair kit and the kit must be packed in strong inner packaging. The strike-anywhere matches must be packed in a cylindrical metal or composition packaging with a screw-type closure and be cushioned to prevent movement;
- d) electric storage batteries (Class 8) and lithium batteries (Class 9); and
- e) first aid kits which may include flammable, corrosive and toxic articles or substances.

The appliances must be packed, so that they cannot be accidentally activated, in strong outer packagings and, except for life vests, the dangerous goods must be in inner packagings packed so as to prevent movement. The dangerous goods must be an integral part of the appliance without which it would not be operational and in quantities which do not exceed those appropriate for the actual appliance when in use.

Passenger restraint systems consisting of a cylinder charged with a non-liquefied, non-flammable compressed gas and no more than two actuating cartridges per passenger restraint system that meet the requirements of the State of Manufacture must be packed in strong outer packagings so they cannot be accidentally activated.

Life-saving appliances may also include articles and substances not subject to these Instructions which are an integral part of the appliance.

## Packing Instruction 956

Passenger and cargo aircraft for UN 1841, UN 1931, UN 3432, UN 2969, UN 3077, UN 3152 and UN 3335 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

## Packing Instruction Y958

Limited quantities  
Passenger and cargo aircraft

### General requirements

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

#### 3) Limited quantity requirements

- Part 3, Chapter 4 requirements must be met, including:
  - the capability of the package to pass a 1.2 m drop test; and
  - a 24-hour stacking test.

## Packing Instruction 959

Passenger and cargo aircraft for UN 3245 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>State</i>	<i>Inner packaging (see 6;3.2)</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>	<b>SINGLE PACKAGINGS</b>
UN 3245 <b>Genetically modified organisms</b>	Liquid	100 mL	No limit	No limit	No
	Solid	100 g	No limit	No limit	

### ADDITIONAL PACKING REQUIREMENTS

- The packaging must comply with all the requirements of Packing instruction 602.

## Packing Instruction 960

Passenger and cargo aircraft for UN 3316 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>State</i>	<i>Inner packaging* (see 6;3.2)</i>	<i>Maximum quantity of dangerous goods per kit</i>	<i>Package quantity — passenger</i>	<i>Package quantity — cargo</i>	<b>SINGLE PACKAGINGS</b>
UN 3316 <b>Chemical kit or First aid kit</b>	Liquid	250 mL	1 L	10 kg	10 kg	No
	Solid	250 g	1 kg			

\*Containing dangerous goods.

### ADDITIONAL PACKING REQUIREMENTS

- Kits may contain dangerous goods which require segregation according to Table 7-1. The packing group assigned to the kit as a whole must be the most stringent packing group assigned to any individual substance contained in the kit.
- Kits must not be packed with other dangerous goods in the same outer packaging, with the exception of dry ice. If dry ice is used, the requirements in Packing Instruction 954 must be met.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes*

Aluminium (4B)  
 Fibreboard (4G)  
 Natural wood (4C1, 4C2)  
 Plastic (4H1, 4H2)  
 Plywood (4D)  
 Reconstituted wood (4F)  
 Steel (4A)

**Packing Instruction Y960**

Limited quantities  
 Passenger and cargo aircraft for UN 3316 only

**General requirements**

Part 4, Chapter 1 requirements must be met (except that 4;1.1.2, 1.1.8 c), 1.1.8 e) and 1.1.16 do not apply), including:

**1) Compatibility requirements**

— Substances must be compatible with their packagings as required by 4;1.1.3.

**2) Closure requirements**

— Closures must meet the requirements of 4;1.1.4.

**3) Limited quantity requirements**

— Part 3, Chapter 4 requirements must be met except 3;4.3.3, including:  
 — the capability of the package to pass a 1.2 m drop test; and  
 — a 24-hour stacking test.

<i>UN number and proper shipping name</i>	<i>State</i>	<i>Inner packaging* (see 6;3.2)</i>	<i>Maximum quantity of dangerous goods per kit</i>	<i>Total gross mass per package</i>	<b>SINGLE PACKAGINGS</b>

	Solid	100 g			

\*Containing dangerous goods.

**ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS**

- Kits may contain dangerous goods which require segregation according to Table 7-1. The packing group assigned to the kit as a whole must be the most stringent packing group assigned to any individual substance contained in the kit.
- Kits must not be packed with other dangerous goods in the same outer packaging, with the exception of dry ice. If dry ice is used, the requirements in Packing Instruction 954 must be met.
- The total quantity of dangerous goods in any one kit and in any one package must not exceed 1 kg.

**OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)***Boxes*

Fibreboard  
 Natural wood  
 Plastic  
 Plywood  
 Reconstituted wood

## Packing Instruction 961

Passenger and cargo aircraft for UN 3268 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

<i>UN number and proper shipping name</i>	<i>Quantity — passenger</i>	<i>Quantity — cargo</i>	<b>SINGLE PACKAGINGS</b>
UN 3268 <b>Air bag inflators or Air bag modules or Seat-belt pretensioners</b>	25 kg	100 kg	No

### ADDITIONAL PACKING REQUIREMENTS FOR COMBINATION PACKAGINGS

- Packagings must meet the Packing Group III performance requirements.
- The packagings must be designed and constructed to prevent movement of the articles and inadvertent operation during normal conditions of transport.
- Any pressure vessel must be in accordance with the requirements of the appropriate national authority for the substance(s) contained in the pressure vessel(s).

#### *Cargo aircraft only*

Air bag inflators, air bag modules and seat-belt pretensioners may also be transported unpackaged on cargo aircraft in dedicated handling devices when transported from where they are manufactured to vehicle assembly plants. When transported in handling devices, the following conditions must be met:

- a) air bag inflators, air bag modules or seat-belt pretensioners as fitted in the handling device must be capable of meeting the test criteria prescribed in Special Provision A115;
- b) the handling device must be completely enclosed;
- c) each air bag inflator, air bag module or seat-belt pretensioner unit must be secured within the handling device to prevent movement in transport; and
- d) irrespective of the limit specified in column 13 of Table 3-1, a handling device meeting these requirements may have a gross mass not exceeding 1 000 kg.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

<i>Boxes</i>	<i>Drums</i>	<i>Jerricans</i>

Reconstituted wood (4F)	Steel (1A2)	
Steel (4A)		

## Packing Instruction 962

Passenger and cargo aircraft for UN 3363 only

### General requirements

Part 4, Chapter 1 requirements must be met (except that the requirements of 4;1.1.2, 4;1.1.8, 4;1.1.10, 4;1.1.13 and 4;1.1.16 do not apply), including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

This entry only applies to apparatus or machinery containing dangerous goods as a residue or as an integral element of the machinery or apparatus. It must not be used for apparatus or machinery for which a proper shipping name exists in Table 3-1. For other than fuel system components, apparatus or machinery may only contain dangerous goods permitted under 3;4.1.2, UN 2807 and gases of Division 2.2 without subsidiary risk but excluding refrigerated liquefied gases.

<i>UN number and proper shipping name</i>	<i>State</i>	<i>Total net quantity of dangerous goods in one package (excluding magnetic material)</i>
<b>UN 3363 Dangerous goods in apparatus or Dangerous goods in machinery</b>	Liquid	0.5 L
	Solid	1 kg
	Gas (Division 2.2 only)	0.5 kg

### ADDITIONAL PACKING REQUIREMENTS

- Receptacles containing dangerous goods must be so secured or cushioned so as to prevent their breakage or leakage and so as to control their movement within the machinery or apparatus during normal conditions of transport. Cushioning material must not react dangerously with the contents of the receptacles. Any leakage of the contents must not substantially impair the protective properties of the cushioning material.
- "Package orientation" labels (Figure 5-26), or preprinted orientation labels meeting the same specification as either Figure 5-26 or ISO Standard 780-1997 must be affixed on at least two opposite vertical sides with the arrows pointing in the correct direction only when required to ensure liquid dangerous goods remain in their intended orientation.
- Irrespective of 5;3.2.10, machinery or apparatus containing magnetized material meeting the requirements of Packing Instruction 953 must also bear the "Magnetized material" label (Figure 5-24).
- For Division 2.2 gases, cylinders for gases, their contents and filling ratios must conform to the requirements of Packing Instruction 200.

#### *Fuel system components*

- Fuel system components must be emptied of fuel as far as practicable and all openings must be sealed securely. They must be packed:
  - 1) in sufficient absorbent material to absorb the maximum amount of liquid which may possibly remain after emptying. Where the outer packaging is not liquid tight, a means of containing the liquid in the event of leakage must be provided in the form of a leakproof liner, plastic bag or other equally efficient means of containment; and
  - 2) in strong outer packagings.

### OUTER PACKAGINGS OF COMBINATION PACKAGINGS (see 6;3.1)

Dangerous goods in apparatus or machinery must be packed in strong outer packagings unless the receptacles containing the dangerous goods are afforded adequate protection by the construction of the apparatus or machinery.

## Packing Instruction 963

Passenger and cargo aircraft for ID 8000 only

Consumer commodities are materials that are packaged and distributed in a form intended or suitable for retail sale for the purposes of personal care or household use. These include items administered or sold to patients by doctors or medical administrations. Except as otherwise provided below, dangerous goods packed in accordance with this packing instruction do not need to comply with 4;1 or Part 6 of these Instructions; they must, however, comply with all other applicable requirements.

- a) Each packaging must be designed and constructed to prevent leakage that may be caused by changes in altitude and temperature during air transport.
- b) Inner packagings that are breakable (such as earthenware, glass or brittle plastic) must be packed to prevent breakage and leakage under conditions normally incident to transport. These completed packagings must be capable of withstanding a 1.2 m drop on solid concrete in the position most likely to cause damage.
- c) When filling receptacles for liquids, sufficient ullage (outage) must be left to ensure that neither leakage nor permanent distortion of the receptacle will occur as a result of an expansion of the liquid caused by temperatures likely to prevail during transport. Unless specific requirements are prescribed in national rules or international agreements, liquids must not completely fill a receptacle at a temperature of 55°C. At this temperature a minimum ullage of 2 per cent should be left. The primary packaging (which may include composite packaging), for which retention of the liquid is a basic function, must be capable of withstanding, without leakage, an internal pressure which produces a pressure differential of not less than 75 kPa or a pressure related to the vapour pressure of the liquid to be conveyed, whichever is the greater. The pressure related to the vapour pressure must be determined by the method shown in 4;1.1.6.1. Tests on sample receptacles must be carried out to demonstrate the capability of the primary packaging to withstand the above pressure.
- d) Stoppers, corks or other such friction-type closures must be held securely, tightly and effectively in place by positive means. The closure device must be so designed that it is extremely improbable that it can be incorrectly or incompletely closed and must be such that it may be easily checked to determine that it is completely closed.
- e) Inner packagings must be tightly packed in strong outer packagings and must be so packed, secured or cushioned so as to prevent any breakage, puncture or leakage of contents into the outer packaging(s) during normal conditions of transport. Absorbent material must be provided for glass or earthenware inner packaging(s) containing consumer commodities in Class 2 or 3 or liquids of Division 6.1, in sufficient quantity to absorb the liquid contents of the largest of such inner packagings contained in the outer packaging. Absorbent and cushioning material must not react dangerously with the contents of the inner packagings. Notwithstanding the above, absorbent material may not be required if the inner packagings are so protected that breakage of the inner packagings and leakage of their contents from the outer packaging will not occur during normal conditions of transport.
- f) Inner packagings containing liquids, excluding flammable liquids in inner packagings of 120 mL or less, must be packed with their closures upward and the upright position of the package must be indicated by "Package orientation" labels (Figure 5-26). These labels, or pre-printed package orientation labels meeting the same specification as either Figure 5-26 or ISO Standard 780-1997, must be affixed to, or printed on, at least two opposite vertical sides of the package with the arrows pointing in the correct direction.
- g) Packagings (including closures) in direct contact with dangerous goods must be resistant to any chemical or other action of such goods; the materials of the receptacles must not contain substances which may react dangerously with the contents, form hazardous products or significantly weaken the receptacles.
- h) Each completed package as prepared for shipment must not exceed a gross mass of 30 kg G.
- i) Class 2 substances must be further limited to aerosol products containing non-toxic compressed or liquefied gas(es) that are necessary to expel liquids, powders or pastes, packed in inner non-refillable non-metal receptacles not exceeding 120 mL capacity each, or in inner non-refillable metal receptacles not exceeding 820 mL capacity each (except that flammable aerosols must not exceed 500 mL capacity each), subject in either case to the following provisions:
  - 1) the pressure in the aerosol must not exceed 1 500 kPa at 55°C and each receptacle must be capable of withstanding, without bursting, a pressure of at least 1.5 times the equilibrium pressure of the contents at 55°C;
  - 2) if the pressure in the aerosol exceeds 970 kPa at 55°C but does not exceed 1 105 kPa at 55°C, an inner IP.7, IP.7A or IP.7B metal receptacle must be used;

- 3) if the pressure in the aerosol exceeds 1 105 kPa at 55°C but does not exceed 1 245 kPa at 55°C, an IP.7A or IP.7B metal receptacle must be used;
  - 4) if the pressure in the aerosol exceeds 1 245 kPa at 55°C, an IP.7B metal receptacle must be used;
  - 5) IP.7B metal receptacles having a minimum burst pressure of 1 800 kPa may be equipped with an inner capsule charged with a non-flammable, non-toxic compressed gas to provide the propellant function. In this case, the pressures indicated in 1), 2), 3) or 4) do not apply to the pressure within the capsule. The quantity of gas contained in the capsule must be so limited such that the minimum burst pressure of the receptacle would not be exceeded if the entire gas content of the capsule were released into an aerosol;
  - 6) the liquid contents must not completely fill the closed receptacle at 55°C;
  - 7) each aerosol exceeding 120 mL capacity must have been heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect; and
  - 8) the valves must be protected by a cap or other suitable means during transport.
- j) For aerosols containing a biological or medical preparation which will be deteriorated by a heat test and which are non-toxic and non-flammable, packed in inner non-refillable receptacles not exceeding 575 mL capacity each, the following provisions are applicable:
- 1) the pressure in the aerosol must not exceed 970 kPa at 55°C;
  - 2) the liquid contents must not completely fill the closed receptacle at 55°C;
  - 3) one aerosol out of each lot of 500 or less must be heated until the pressure in the aerosol is equivalent to the equilibrium pressure of the contents at 55°C, without evidence of leakage, distortion or other defect; and
  - 4) the valves must be protected by a cap or other suitable means during transport.
- k) Except for aerosols, inner packagings must not exceed:
- 1) 500 mL for liquids; and
  - 2) 500 g for solids.
- l) Consumer commodities shipped according to these provisions may be shipped in a unit load device or other type of pallet prepared by a single shipper provided they contain no other dangerous goods. The shipper must provide the operator with written documentation stating the number of packages of consumer commodities contained in each unit load device or other type of pallet.
- m) The gross mass on the dangerous goods transport document must be shown as:
- 1) for one package, the actual gross mass of the package;
  - 2) for more than one package, either the actual gross mass of each package or as the average mass of the packages. (For example, if there are 10 packages and the total gross mass of them is 100 kg, the dangerous goods transport document may show this as "average gross mass per package 10 kg".)

## Packing Instruction 964

Passenger and cargo aircraft for UN 1941, UN 1990, UN 2315, UN 3151, UN 3082 and UN 3334 only

### General requirements

Part 4, Chapter 1 requirements must be met, including:

#### 1) Compatibility requirements

- Substances must be compatible with their packagings as required by 4;1.1.3.

#### 2) Closure requirements

- Closures must meet the requirements of 4;1.1.4.

## Packing Instruction 965

Passenger and cargo aircraft for UN 3480

This entry applies to lithium ion or lithium polymer batteries in Class 9 (Section I) and lithium ion or lithium polymer batteries subject to specific requirements of these Instructions (Section II).

### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

### General requirements

Part 4;1 requirements must be met.

Contents	Package quantity (Section I)	
	Passenger	Cargo
Lithium ion cells and batteries	5 kg G	35 kg G

### ADDITIONAL PACKING REQUIREMENTS

- Lithium ion cells and batteries must be protected against short circuits.
- Packagings must meet the Packing Group II performance requirements.
- Lithium ion batteries with a mass of 12 kg or greater and having a strong, impact-resistant outer casing, or assemblies of such batteries, may be transported when packed in strong outer packagings and protective enclosures not subject to the requirements of Part 6 of these Instructions, if approved by the appropriate authority of the State of Origin. A copy of the document of approval must accompany the consignment.

### OUTER PACKAGINGS

#### Boxes

Aluminium (4B)  
Fibreboard (4G)  
Natural wood (4C1, 4C2)  
Plastic (4H2)  
Plywood (4D)  
Reconstituted wood (4F)  
Steel (4A)

#### Drums

Aluminium (1B2)  
Fibre (1G)  
Plastic (1H2)  
Plywood (1D)  
Steel (1A2)

#### Jerricans

Aluminium (3B2)  
Plastic (3H2)  
Steel (3A2)

### SECTION II

Lithium ion cells and batteries offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium ion cells and batteries may be offered for transport if they meet the following:

- 1) for lithium ion cells, the Watt-hour rating (see Attachment 2) is not more than 20 Wh;

- 2) for lithium ion batteries, the Watt-hour rating is not more than 100 Wh;
  - the Watt-hour rating must be marked on the outside of the battery case except for those batteries manufactured before 1 January 2009, which may be transported in accordance with the provisions of this section and without the marking until 31 December 2010;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

#### General requirements

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

Contents	Package quantity (Section II)	
	Passenger	Cargo
Lithium ion cells and batteries	10 kg G	10 kg G

#### ADDITIONAL PACKING REQUIREMENTS

- Cells and batteries must be packed in inner packagings that completely enclose the cell or battery.
- Cells and batteries must be protected so as to prevent short circuits. This includes protection against contact with conductive materials within the same packaging that could lead to a short circuit.
- Each package must be capable of withstanding a 1.2 m drop test in any orientation without:
  - damage to cells or batteries contained therein;
  - shifting of the contents so as to allow battery to battery (or cell to cell) contact;
  - release of contents.
- Each package must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium ion cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

#### OUTER PACKAGINGS

*Boxes*

*Drums*

*Jerricans*

Strong outer packagings

### Packing Instruction 966

Passenger and cargo aircraft for UN 3481 (packed with equipment) only

This entry applies to lithium ion or lithium polymer batteries packed with equipment in Class 9 (Section I) and lithium ion or lithium polymer batteries packed with equipment subject to specific requirements of these Instructions (Section II).

#### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

### General requirements

Part 4;1 requirements must be met.

Contents	Package quantity (Section I)	
	Passenger	Cargo
Quantity of lithium ion cells and batteries per overpack, excluding equipment	5 kg	35 kg

### ADDITIONAL PACKING REQUIREMENTS

- Lithium ion cells and batteries must be protected against short circuits.
- The completed package for the cells or batteries must meet the Packing Group II performance requirements.
- The equipment and the packages of lithium cells or batteries must be placed in an overpack. The overpack must bear applicable marks and labels as set out in Part 5;1 and 5;2.4.10.
- For the purpose of this packing instruction, "equipment" means apparatus requiring the lithium ion batteries with which it is packed for its operation.

### OUTER PACKAGINGS

#### Boxes

Aluminium (4B)

## SECTION II

Lithium ion cells and batteries (including lithium polymer) packed with equipment offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium ion cells and batteries may be offered for transport if they meet the following:

- 1) for lithium ion cells, the Watt-hour rating (see Attachment 2) is not more than 20 Wh;
- 2) for lithium ion batteries, the Watt-hour rating is not more than 100 Wh;
  - the Watt-hour rating must be marked on the outside of the battery case except for those batteries manufactured before 1 January 2009, which may be transported in accordance with the provisions of this section and without the marking until 31 December 2010;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

### General requirements

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

### ADDITIONAL PACKING REQUIREMENTS

- Cells and batteries must be packed in inner packagings that completely enclose the cell or battery.
- Cells and batteries must be protected so as to prevent short circuits. This includes protection against contact with conductive materials within the same packaging that could lead to a short circuit.
- The maximum number of batteries in each package must be the minimum number required to power the equipment, plus two spares.
- Each package must be capable of withstanding a 1.2 m drop test in any orientation without:
  - damage to cells or batteries contained therein;
  - shifting of the contents so as to allow battery to battery (or cell to cell) contact;
  - release of contents.
- Each package must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium ion cells or batteries;

- the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

Strong outer packagings

**Packing Instruction 967**

Passenger and cargo aircraft for UN 3481 (contained in equipment) only

This entry applies to lithium ion or lithium polymer batteries contained in equipment in Class 9 (Section I) and lithium ion or lithium polymer batteries contained in equipment subject to specific requirements of these Instructions (Section II).

**SECTION I**

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

**General requirements**

Part 4;1 requirements must be met.

<i>Contents</i>	<i>Net quantity per piece of equipment (Section I)</i>	
	<i>Passenger</i>	<i>Cargo</i>
Lithium ion batteries contained in equipment	5 kg	35 kg

**ADDITIONAL PACKING REQUIREMENTS**

- Outer packaging must be waterproof or made waterproof through the use of a liner, such as a plastic bag unless the equipment is made waterproof by nature of its construction.
- The equipment must be secured against movement within the outer packaging and be packed so as to prevent accidental operation during air transport.

**OUTER PACKAGINGS***Boxes**Drums**Jerricans*

Strong outer packagings

**SECTION II**

Lithium ion cells and batteries (including lithium polymer) contained in equipment offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section. Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium ion cells and batteries may be offered for transport if they meet the following:

- 1) for lithium ion cells, the Watt-hour rating (see Attachment 2) is not more than 20 Wh;
- 2) for lithium ion batteries, the Watt-hour rating is not more than 100 Wh;
  - the Watt-hour rating must be marked on the outside of the battery case except for those batteries manufactured before 1 January 2009, which may be transported in accordance with the provisions of this section and without the marking until 31 December 2010;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the *UN Manual of Tests and Criteria*, Part III, section 38.3.

**General requirements**

Equipment must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

**ADDITIONAL PACKING REQUIREMENTS**

- The equipment must be equipped with an effective means of preventing accidental activation.
- Cells and batteries must be protected so as to prevent short circuits.
- The equipment must be packed in strong outer packagings constructed of suitable material of adequate strength and design in relation to the packaging's capacity and its intended use unless the battery is afforded equivalent protection by the equipment in which it is contained.
- Each package containing more than four cells or more than two batteries installed in equipment must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment with packages bearing the lithium battery handling label must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium ion cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

Strong outer packagings

**Packing Instruction 968**

Passenger and cargo aircraft for UN 3090

This entry applies to lithium metal or lithium alloy batteries in Class 9 (Section I) and lithium metal or lithium alloy batteries subject to specific requirements of these Instructions (Section II).

**SECTION I**

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the *UN Manual of Tests and Criteria*, Part III, section 38.3; and

- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

Cells, and batteries containing one or more cells, with a liquid cathode containing sulphur dioxide, sulphuryl chloride or thionyl chloride which have been discharged to the extent that the open circuit voltage is less than the lower of:

- a) two volts; or
- b) two-thirds of the voltage of the undischarged cell;

are forbidden from transport.

#### General requirements

Part 4;1 requirements must be met.

Contents	Package quantity (Section I)	
	Passenger	Cargo
Lithium metal cells and batteries	2.5 kg G	35 kg G

#### ADDITIONAL PACKING REQUIREMENTS

- Lithium metal cells and batteries must be protected against short circuits.
- Packagings must meet the Packing Group II performance requirements.
- Lithium batteries with a mass of 12 kg or greater and having a strong, impact-resistant outer casing, or assemblies of such batteries, may be transported when packed in strong outer packagings and protective enclosures not subject to the requirements of Part 6 of these Instructions, if approved by the appropriate authority of the State of Origin. A copy of the document of approval must accompany the consignment.
- For lithium metal cells and batteries prepared for transport on passenger aircraft as Class 9:
  - Cells and batteries offered for transport on passenger aircraft must be packed in intermediate or outer rigid metal packaging.
  - Cells and batteries must be surrounded by cushioning material that is non-combustible and non-conductive, and placed inside an outer packaging.

#### SECTION II

Lithium metal or lithium alloy cells and batteries offered for transport are not subject to other additional requirements of these Instructions if they meet the requirements of this section.

Lithium batteries, identified by the manufacturer as being defective for safety reasons, or that have been damaged, that have the potential of producing a dangerous evolution of heat, fire or short circuit are forbidden for transport (e.g. those being returned to the manufacturer for safety reasons).

Lithium metal or lithium alloy cells and batteries may be offered for transport if they meet the following:

- 1) for a lithium metal cell, the lithium content is not more than 1 g;
- 2) for a lithium metal or lithium alloy battery, the aggregate lithium content is not more than 2 g;
- 3) each cell or battery is of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3.

#### General requirements

Batteries must be packed in strong outer packagings that conform to Part 4;1.1.1, 1.1.3.1 and 1.1.9 (except 1.1.9.1).

Contents	Package quantity (Section II)	
	Passenger	Cargo
Lithium metal cells and batteries	2.5 kg G	2.5 kg G

#### ADDITIONAL PACKING REQUIREMENTS

- Cells and batteries must be packed in inner packagings that completely enclose the cell or battery.
- Cells and batteries must be protected so as to prevent short circuits. This includes protection against contact with conductive materials within the same packaging that could lead to a short circuit.
- Each package must be capable of withstanding a 1.2 m drop test in any orientation without:
  - damage to cells or batteries contained therein;
  - shifting of the contents so as to allow battery to battery (or cell to cell) contact;
  - release of contents.
- Each package must be labelled with a lithium battery handling label (Figure 5-31).
- Each consignment must be accompanied with a document such as an air waybill with an indication that:
  - the package contains lithium metal cells or batteries;
  - the package must be handled with care and that a flammability hazard exists if the package is damaged;
  - special procedures should be followed in the event the package is damaged, to include inspection and repacking if necessary; and
  - a telephone number for additional information.
- Any person preparing or offering cells or batteries for transport must receive adequate instruction on these requirements commensurate with their responsibilities.

### Packing Instruction 969

Passenger and cargo aircraft for UN 3091 (packed with equipment) only

This entry applies to lithium metal or lithium alloy batteries packed with equipment in Class 9 (Section I) and lithium metal or lithium alloy batteries packed with equipment subject to specific requirements of these Instructions (Section II).

#### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the UN *Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

Cells, and batteries containing one or more cells, with a liquid cathode containing sulphur dioxide, sulphuryl chloride or thionyl chloride which have been discharged to the extent that the open circuit voltage is less than the lower of:

- a) two volts; or
- b) two-thirds of the voltage of the undischarged cell;

are forbidden from transport.

**General requirements**

Part 4;1 requirements must be met.

Contents	Package quantity (Section I)	
	Passenger	Cargo
Quantity of lithium metal cells and batteries per overpack, excluding equipment	5 kg	35 kg

**ADDITIONAL PACKING REQUIREMENTS**

- Lithium metal cells and batteries must be protected against short circuits.
- The completed package for the cells or batteries must meet the Packing Group II performance requirements.
- Each completed package containing lithium cells or batteries must be marked and labelled in accordance with the applicable requirements of 5;1, 5;2 and 5;3.
- The equipment and the packages of lithium cells or batteries must be placed in an overpack. The overpack must bear applicable marks and labels as set out in 5;1 and 5;2.4.10.
- For the purpose of this packing instruction, "equipment" means apparatus requiring the lithium batteries with which it is packed for its operation.
- For lithium metal cells and batteries prepared for transport on passenger aircraft as Class 9:
  - Cells and batteries offered for transport on passenger aircraft must be packed in intermediate or outer rigid metal packaging surrounded by cushioning material that is non-combustible and non-conductive and placed inside an outer packaging.

### Packing Instruction 970

Passenger and cargo aircraft for UN 3091 (contained in equipment) only

This entry applies to lithium metal or lithium alloy batteries contained in equipment in Class 9 (Section I) and lithium metal or lithium alloy batteries contained in equipment subject to specific requirements of these Instructions (Section II).

#### SECTION I

Section I requirements apply to each cell or battery type that has been determined to meet the criteria for assignment to Class 9.

Each cell or battery must:

- 1) be of the type proven to meet the requirements of each test in the *UN Manual of Tests and Criteria*, Part III, section 38.3; and
- 2) incorporate a safety venting device or be designed to preclude a violent rupture under conditions normally incident to transport and be equipped with an effective means of preventing external short circuits.

Each battery containing cells or a series of cells connected in parallel must be equipped with an effective means, as necessary, to prevent dangerous reverse current flow (e.g. diodes, fuses).

Cells, and batteries containing one or more cells, with a liquid cathode containing sulphur dioxide, sulphuryl chloride or thionyl chloride which have been discharged to the extent that the open circuit voltage is less than the lower of:

- a) two volts; or
- b) two-thirds of the voltage of the undischarged cell;

are forbidden from transport.

#### General requirements
